Clinton intervenes in move to revive peace process after unrest in which 70 died ls summit over Mideast

By Judy Dempety In Jurek Martin in Washington

President Bill Clinton last night invited Middle East lead-ers to an emergency summit at the White House this week in an effort to revive the peace process. His intervention came as Israel reopened the tunnel in the old city of Jerusalem, the issue that triggered last week's unrest in which at least

70 people died. Mr Clinton yesterday invited Mr Benjamin Netanyahu, Israeli prime minister, and Mr Yassir Arafat, leader of the Palestinian Authority, as well as King Hussein of Jordan and Mr Hosni Mubarak, Egyptian president, to the White House. Last night there was uncertainty over the participation of Mr Arafat and Mr Mubarak.

Mr Arafat is today to travel to towards peace in the past two implicitly critical of Israeli Cairo to see Mr Mubarak, who is seeking more concrete measures from Israel. The Egyp-tian reluctance has delayed acceptance by Mr Arafat who yesterday said he wanted "a five-way participation". Last week the Egyptian pres-

ident unsuccessfully tried to hroker an agreement for a summit meeting between Mr Netanyahu and Mr Arafat. Mr Netanyahu yesterday insisted that Mr Arafat had to "keep up his end of the bargain" if the summit was to pro-

duce dividends.

Mr Clinton's initiative was unveiled in a brief announcement following clashes between Israeli troops and Palestinians. He described last week's event as "all the more shocking" because both sides had undertaken "giant steps"

In US television interviews and in statements released by his government in Jerusalem, Mr Netanyahu said Mr Arafat "must police his own [Palestin-ian] police" if Israel were even to consider redeploying its

Notanyahu seeks to regain the

forces in the West Bank towns of Hebron and Nablus. Mr Warren Christopher, US secretary of state, refused in a

television interview to apportion blame for the recent clashes. However, he agreed the peace process was 'm jeopardy" and warned it would be wrong to expect "a miracle" in the Washington talks. He was

estions that the Palestinian police be disarmed, adding that Mr Netanyahu "must understand that in the long term Israel is better off with

good relations with its neigh-

There are widespread US servations about the intransigence of the new Israeli gov-ernment. Aithough the US did-not publicly join European nations in demanding that Israel close the archaeological tunnel in Jerusalem, Mr Christopher is understood to have conveyed similar views in his many telephone conversations

with the Israeli government.

A statement released by Mr.
Netanyahu's office said the meeting in Washington was called "in order to bring concrete results... to end the violence in the area and to accel-

Mr Netanyahu, however, is and the far right wing in his to make any concessions.

The opposition Labour party, sections of public opinion and Mr Ezer Weizmann, president of Israel have urged the Israeli leader to salvage the peace process. Yesterday, Israsii Radio reported criti-cisms from Mr Weizmann who said Mr Netanyahu had made errors of judgment over the past few days, views echoed by senior military officers and Mr Yitzhak Mordechai, defence

Mr Arafat said that closing the tunnel exit would show prudent judgment". Israeli soldiers were yesterday guarding the tunnel after it was US President Bill Clinton:

EU chief plans attack on **Brussels** patronage

By Lionel Barber in Brussels

Mr Jacques Santer, president of the European Commission, plans an administrative shake-up which will include releasing the stranglehold of national patronage in top-level appointments.

The changes, to be revealed soon, will be the first effort in 15 years to introduce mini-mum public edministration

But they face opposition from member etates and a coterie of commissioner "bar-ons" and their cabinet staffs who have exploited a cosy share-out of top posts in the

ques Delors, who devoted his talents to promoting big ideas such as the single market and monetary union rather than

cleaning house" in Brussels. Commissioners whose practices are under scrutiny are Str Leon Brittan, chief trade negotiator, and Mr Martin Bangemann, the long-serving German commissioner responsible for industry, a senior official

The changes come as the EU is preparing to negotiate larger membership at the turn of the century with central and east European states.

One senior official said: "We cannot possibly continue operating as we are doing now because we would have total paralysis in e bigger union."

The plans include breaking the system of horse-trading among member nations for top posts below director-general. the most senior civil service rank, which often blocks promotion on merit and leaves top jobs unfilled for months.

However, they do not involve the formal national quotas for the appointment of commissioners and directors-

Mr Santer will also tackle the practice of outsiders being promised automatic promotion Or a job for life in the bureancracy after they have served in commissioners' cabinets. Another problem to be dealt with is top officials being too busy or too lazy to carry out

serious career or job performance assessments of staff. One senior official said: Because of this everybody in the commission is rated as a

Mr Santer's edvisers also believe the commission's approach remains anarchic. Individuel commissioners plough their own furrows, particularly in foreign and trade

Dehaene to present Emu budget

(as % of GDP)

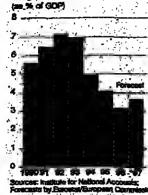

By Neil Buckley in Brussels

Belgium is to use BFr236bn (\$7.7bn) of foreign exchange reserves to reduce its debt mountain, as part of a controversial package of measures to be revealed tomorrow to ensure the country meets the convergence criteria for monetary union.

Mr Jean-Luc Dehaene, prime minister, will also announce unpopular reforms of the pensions system, cuts in child allowances, and a range of indirect tax increases designed to take Belgium's budget deficit below the required 3 per cent of GDP next year.

Mr Dehaene will present get of the century" to parliament, but MPs cannot overturn it, as the Christian Socialist premier won temporary special powers in the summer - unique in the European Union - to legislate by decree on budgetary matters. Those powers will

within days, and give Mr reforms leaked. His five-Dehaene scope to introduce further measures any time Belgium appears in danger of oversbooting the Maas-

tricht targets. The prime minister may however face more bruising battles with Belgium's unions, which called protests in several cities last week

efficiancy improvements, and indirect tax increases.

Pension reforms include harmonisation of the retirement age, currently 65 for men and 60 for women. Child allowance changes are likely to remove supplementary benefits for children

Excise taxes will be increased, with a BFr2 per litre tax on petrol. There is likely to be particular resentment at the introduction of tax on the value of previously tax-free savings deposits - popular with pension-

TV game shows EU in accord on rules for telecoms licensing

By David Owen in Paris

face euro test

TV game shows should be encouraged to give the value of their prizes in euros as well as national currencies as part of a promotional campaign ahead of the introduction of Euro notes and coins in 2002.

This is one of the more eye-catching recommendations of a 70-page report on legal aspects of the switch to a single currency published recently by French

The report paints a generally optimistic picture of the transition - arguing, for example, that the continuity of contracts denominated in national currencies "seems to present no problems".

But it warns of possible difficulties with contracts denominated in Ecus: "The question is bow to know in which currency and for what value obligations denominated in Ecus falling due after January 1 1999 should be paid because from Tel: (322) 230-83-31.

that date the Ecu will no

It also points to the need to provide a plan to combat attempts to counterfeit the new currency.

The promotion of the euro should start "in a massive way" in 2000, one year after it is introduced as a unit of account, but two years before the appearance of euro notes and coins.

Companies would have to provide for the training of their staff, "with their own funds but also with external help" from national governments or the European Union.

Shop prices should be displayed in both euros and national currencies from 2000, with the same principle applying to salary slips and bank services.

GERMANY: rejected the new tax outright and threatened a new campaign of non-neyment.

Business associations and traders were also concerned that, by opting for fiscal measures rather than more spending cuts, the government could damp the economy when it needed to be encouraged to shake off what has almost amounted to a recession this year.

The government has announced that over L4,000bn, part of the budget, will come in as yet unspecified taxes. But probably these could take the form of rises in VAT and petrol taxes. On savings, the axe will fall across the board but pensions will be not be touched except where special privileges exist. The biggest cut will be almost L5,000bn in transfers to local authorities.

INTERNATIONAL NEWS DIGEST

Six Telstra directors quit

The federal government of Australia yesterday asked six directors of Telstra, Australia's state-owned telecommunications carrier, to resign and replaced them with five new appointees.

Mr Richard Alston, communications minister, said the new board members had the talent and skills to prepare Telstra for the challenge of open competition and the proposed part-privatisation.

Australia's conservative coalition government is attempting to pass legislation which would allow it to sell one third of Teletra, but is meeting opposition in the Senate. The Australian telecommunications market is to be opened to full competition from July 1997.

The new board members include Mr John Raiph, former chief executive of the mining company CRA, who will become deputy chairman, and Mr Ross Adler, chairman of the oil and gas company Santos. Bethan Hutton, Sydney

Tamil Tiger bastion falls

Sri Lankan security forces captured the last bastion of Tamil Tiger guerrillas after a week of fighting that left dead 255 government soldiers and an estimated 750 rebels, the defence ministry said yesterday. Troops smashed defences of the separatist Liberation

ligers of Tamil Eelam (LTTE) and took control of the town of Kilinochchi, headquarters of the LTTE in the north of the country, a military spokesman said.

The battle for Kilinochchi was launched on September 22 with the deployment of some 20,000 government troops backed by tanks, artillery and aircraft, Military analysts said the fall of the town was a significant breakthrough in the fight against the LITE. Amal Jayasinghe, Colombo

Asean to delay Burma entry

Foreign ministers from the Association of South-east Nations (Asean) have decided Burma's entry into the organisation should be delayed indefinitely. The move, coming in the wake of another crackdown on pro-democracy activists at the weekend, is a big blow to the military regime's quest for international

The decision, made during a foreign ministers' meeting at the opening of the UN General Assembly in New York, will be conveyed to Assan heads of state when they meet informally in Indonesia on November 30. The heads of state themselves are likely to ratify the decision.

The Philippines and Thailand led the push for delaying membership, citing the fluid political situation in Burma and the desire not to burden the organisation with sary problems.

Mr Ali Alatas, Indonesian foreign minister and a staunch defender of the Burmese junta, publicly supported the move, saying there was no reason to rush membership for Burma, especially with both Cambodia and Laos set to join next year. Ted Bardacke, Bungkok

Scandex auditors resign

The Copenhagen branch of Deloitte & Touche, the accountancy firm, has resigned as joint auditor of Scandex Capital Management, a Danish-based company promoting high-risk currency schemes to private investors across Europe.

As a result of a half-year audit undertaken in August,

Deloitte and joint auditor City Revision, a Copenhagen firm, concluded they could no longer act as auditors for Scander and resigned on September 19. Scandor is one of several companies which solicit customers through cross-border "cold calls" and direct mail to engage in high-risk currency trades. Clay Harris, London

Armenia poll result confirmed

Final figures released by the Armenian Central Electoral Commission yesterday gave President Levon Ter-Petrosian victory over his main opposition rival with Troops and tanks pulled back from the main streets of

Yerevan, the Armenian capital, before final results last weekend's presidential election were announced.

The count - little changed from provisional figures released last week - means there is no need for a run-off ballot between the two top candidates. Second-placed Mr Vazgen Manukyan took 41.29 per cent. International observers said there had been problems, but stopped short of calling the election unfair. Some said the irregularities might have been enough to tip Mr Ter Petrosian over the 50 per cent needed to win in the first round.

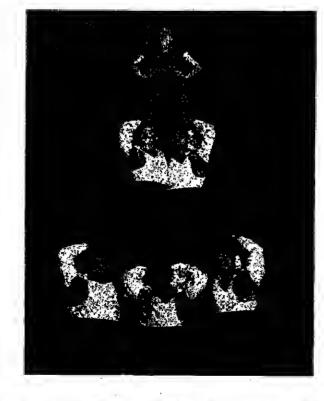

Japanese novelist dies

Mr Shusaku Endo, one of Japan's best-known novelists and winner of virtually every big Japanese literary award died yesterday aged 73.

Endo won international acclaim. Critics said that as a Roman Catholic, he offered a unique view of Japan to the outside world. He was known at home both as a serious author of novels and plays on religious themes and as a Doctors at the Tokyo hospital in which he was staying

said that he died from respiratory complications caused by hepatitis. "Shiroi Hito" (White Man), published in 1955, brought him the Akutagawa Prize.

Teamwork at its best

Getting somewhere in today's energy business calls for a good team spirit. It demands trust in the ability of every partner to offer a reliable and economically viable energy service. And it means joining forces to develop flexible energy concepts. We support our partners in east Germany – regional distributors, utilities, local government and industry – in the planning and realisation of energy projects. As a gas merchant company we do our share to keep up with the ever-growing popularity of gas. Our experience, our know-how and our commitment make us the right partner for energy.

Meeting this week on rebuilding institutions

Bosnia's election results certified

By Laura Silber in Sarajevo

International officials last night certified the results of Bosnia's imperfect general elections, paving the way for the establishment of the multi-ethnic institutions meant to re-unify the wartorn country.

The elections heve been surrounded by controversy over both the count and the failure to implement key elements of the Dayton peace agreement.

r bastion falls

militar resign

 $\varphi_{m+2} g_{m}$

and the same of the same of the same of and the second

😅 centil collect

But now the results are certified, the next phase of the year-long Dayton plan . aimed at joining Bosnia's two halves, the Moslem-Croat Federation and Republika Srpska, the Serb entity, in a loose union, can get under way. The representatives to the new three-man collective presidency are expected to meet early this week in Sarajevo, although they have yet to agree on a venue or a time - the part of the Federation under Mos-

lem control yesterday set its clocks back an hour while the Bosnian Serb and Croatbeld areas remained on the

Mr Alije Izetbegovic, the Moslem-elected chairman of tha presidency after nar-rowly edging out Mr Mom-cilo Krajisnik, his Serb counterpart, must meet Mr Krajisnik and Mr Kresimir Zubak, a Croat, within four days of the certification of alection results. Mr Krajisnik objects to a meeting in Sarajevo, until last year's Dayton agreement besieged by Serb guns. The presidency and the joint Bosnian legislature were elected on September 14 in the poll overseen by the Organisa-

tion for Security and Co-operation in Europe. Mr Robert Frowick, head of the OSCE mission to Bosnia, said at the weekend he considered the results "imperfect" hut "acceptable". The poll was held in spite of the ebsence of free-

dom of movement and the right of return for refugees to their homes, required under the Dayton accords.

The International Crisis Group (ICG), an independent monitoring agency, said yesterday that "it would be wholly irresponsible to cer-tify the elections as valid or as free, fair and democratic", particularly after the OSCE summed a call for a recount hy the tribunal it had appointed to assure fair play.

Citing e "suspiciously high" voter turn-out and "intentional spoiling of ballots", the ICG said: "Massive fraud cannot be ruled out." It said: "Fraud at counting stations was undoubtedly committed," claiming a turnout of 95 per cent in Visegrad and 110 per cent in Camice, Serb held towns. Indeed, the OSCE's own

tribunal said: "Inadequate supervision of the count in Serb-held Cajnice resulted in the opportunity for additional acts of fraud."

Drop in savings raises hopes for French growth

By David Owen in Paris

The French look set to save e significantly lower proportion of their disposeble income in 1996, in a development that mey have a favourable knock-on effect for the country's sluggish

Economists are projecting an average savings ratio of 12.7 per cent in 1996, a sizeable reduction from the 14.3 per cent level of 1995.

If this money goes into consumption, it may provide a welcome and much-needed boost for the economy, which has been hit this year by low investment and mexpectedly slow export growth.

However, economists probably be linked to higher savings rates.

Economists are divided over the reasons for this year's expected reduction in Tatiana Malkina castigating

Russian papers are all heart

RUSSIA By Chrystia Freeland

This week, heart surgery replaced torrid Latin American soap operas as Russia's favourite torric of conversation. Detailed anatomical drawings of the heart and its main arteries have taken over the television screens and newspapers as Russians struggle to learn how long their recently re-elected president will be fit to rule. The president's health is now a subject about which

now a subject about which voters believe they can legitimately demand information. The current wave of glasmost has highlighted a sechange in Russian political life. Two or three years ago, it was possible to to reduce the riot of Russian politics into a clear-cut struggle between democrats and communists, reformers and reactionaries, without doing too much violence to the truth.

much violence to the truth. Though many politicians still cling to this comforting dichotomy, -it is rapidly becoming a irrelevant.
Instead, Russia is being split
into those who back the current regime, and everyone

else. This new bettle line was clear in the newspapers, whose coverage of Mr Boris Yeltsin's illness this week was guided by specific political loyalties rather than abstract moral principles.

Consider Sevodnya, the classy Moscow daily which huilt its reputation as the government incentive voice of the liberal, democratically-minded intelligentsia. This summer, Sevodnya strenuously backed Mr Yelt-sin's re-election bid on the grounds that, so long as the nation faced the threat of e Communist comeback, journalistic neutrality was an impermissible luxury.

> The Communists were trounced, but many of Sevodnya's writers eppear reluctant to surrender their cosy ties with the Kremlin. Last week, amid a barrage of fresh revelations about the president's health, Sevodnya ran a front-page column by the Russian and western tion has made headlines journalists and political lead-

Russia sees Mr Yeltsin's operation as an opportunity for his unpopular chief of staff, Anatoly Chubais, to gain power

press for subjecting Mr Yelt- abroad: foreign reporters are sin to such unseemly scru- bored.

The piece begins by ridiculing ordinary Russians for their interest in their leader's condition: "The cashier in the supermarket, with an impassioned whisper, tells her mate that, ectually, the president needs to have his feet amputated and the old ladies, seemingly having forgotten about their meagre pensions, simply pity the man with heart troubles."

However, demonstrating the breakdown of old categories of pro-western liberals and anti-western reactionaries, the columnist's real ire is directed towards the west. After observing, in shocked tones, that western journalists have challenged the restrained coverage of Mr Yeltsin's illness in many Russian newspepers, Ms Malkina lets her readers in on the real reason why the Kremlin leader's heart condi-

"Of course, the intoxication of our western colleagues is, from a human point of view, understandeble: over the past 20 years the work of foreign journal-ists in Russia has offered e hot combination of timely subject matter, exoticism and danger which has had the eddictive powers of e narcotic ... Now, it has become boring."

Not all Russian liberals have followed Ms Malkina's decision to put political loyalty above hard-hitting journalism. Mr Boris Pankin, a prominent Russian democrat who briefly served as Mr Yeltsin's foreign minister, takes the opposite tack in a fierce opinion piece which was published last Thursday in Obshchaya Gazeta, 8 weekly newspaper.

Like Ms Malkina, Mr Pankin attacks the west, but his complaint is that western

ers have been complicit in the Kremlin cover-up of Mr Yeltsin's health problems.

A former Soviet diplomat who rose to public prominence when he denounced the hardline coup plotters in 1991, Mr Pankin accuses Mr Helmut Kohl, the German chancellor, and Mr Al Gore. the US vice-president, of helping the Russian govern-ment to deceive its own people. Both men gave glowing reports about the state of Mr Yeltsin's health after meeting him this summer.

Whereas Ms Malkina praises the Kremlin for pitting that Mr Yaltsin needs heart surgery, Mr Panking attacks the government for lying about the presi-dent's health during the crucial period between the first and second rounds of the presidential ballot this sum-

The current generation in power has simply discounted morality in all of its decions." Mr Pankin writes of his former political allies. Every means is good, so long as it leads to the final end - that is the principle which today guides the Kremlin. And for the sake of one goal - to keep the curpresident in power by and method and thus to keep themselves in power along-side him."

bese dehates over ther the west is too hard or too easy on Russia, and whether the Kremlin should be praised for its openness or attacked for its deceptions, are likely to ebsorb Russian newspapers for some months to come.

Yet, whether they are propresidential or spitefully critical, all Russia's newspapers have been intrigued by the human interest story of the month: e woman's offer to donate her own heart to Mr Yeltsin should be need e

The president's media critics say he is not worthy of this popular respect; his journalistic fans say all of Russia should be so enthusiastic. But all the nation's hacks agree thet Zinaida Ramazonovna's pledge is a termic news story.

Hungary securities bill raises doubts

By Kester Eddy and Virginia Marsh in Budapest

The Bndapest Stock Exchange is urging the Hungarian parliament to modify several provisions of a much-overdue securities bill designed to bring local regu-

tional norms. The exchange says the new law, which bas been approved by the Socialist-led cabinet and is due to be discussed in parliament this week, would, among other things, give commercial banks undne advantages over brokers. The bill would allow commercial banks to deal directly in government securities and derivatives from next year and in all securities by 1999, rather than through brokerage sub-

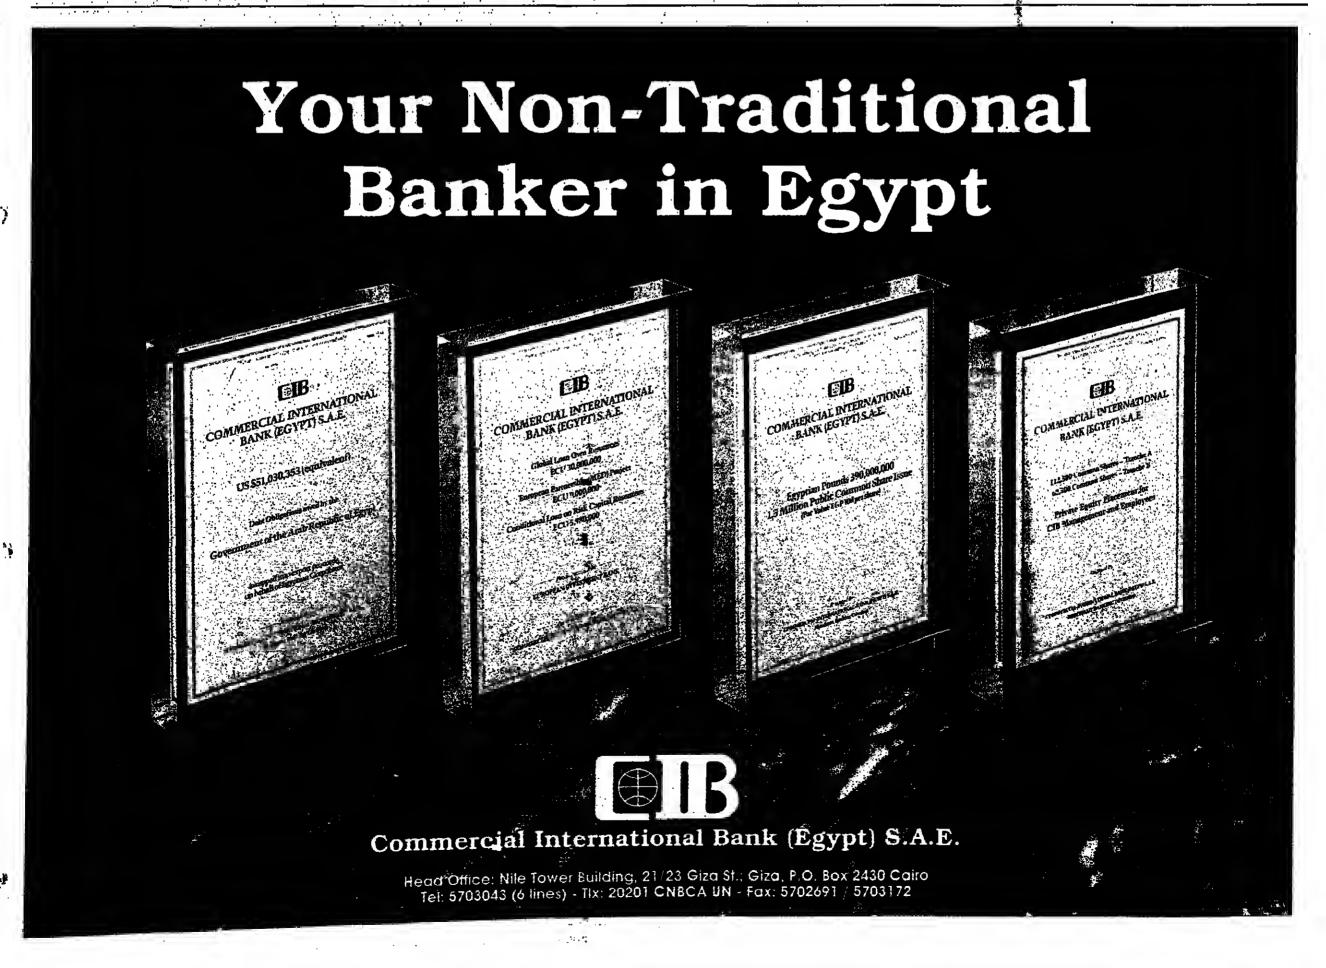

sidiaries as at present. At the same time, broker age companies would not be able to open cash accounts or exchange currencies for investors in securities – services the stock exchange considers essential to cut costs of the cross-border trading that drives the exchange.

Budapest has been one of the world's best performing markets this year, with most investment coming from abroad. The Bux index rose 76 points to 3,547 on Friday, up from 1,529 at the start of the year.

However, the market remains small and illiquid by western standards with just 44 companies listed and the industry has long pressed for new legislation.

The hill tightens regulations on insider trading and disclosure requirements for traded companies, ensures greater protection for investors and provides for gradnal introduction of a paperfreebased system.

However, there is widespread disappointment that a takeover code - one of the greatest omissions from existing legislation - was removed from the bill et the last minute.

Investor confidence slumps as pressure grows on government

Bhutto in US bid to save standby loan

erhan Bokhari in Islamabad

Banazir Bhutto. Pakistan's prime minister. departed yesterday for a week-long trip to the US during which she will try to persnade the International Monetary Fund to revive stalled cide, though his family payments on a \$600m claimed that he was shot by standby loan, talks which two masked gunme may prove vital to her gov-

ernment's survival. Some form of accord with the Fund will be critical to Pakistan not just in helping tide the country over heavy short-term foreign currency requirements, but also in shoring up confidence in the sconomy. Investor confidence has slumped in recent weeks, hurt by both the economy's mixed performance and rising uncertainty surrounding Ms Bhutto's government.

Ms Bhutto will hope for an accord to win political capi-

tal and help ease the pressure on her government, which has sharpened considerably after this month's slaying in Karachi of Murtaza Bhntto, her brother, and a subsequent series of interventions from President Farooq Leghari.

moves, including an unprecedented meeting with Mr Nawaz Sharif, leader of the opposition, have suggested a growing rift between Ms Bhutto and the president, who has the constitutional power to dissolve the gov-

It was unclear yesterday whether a six-hour meeting between Mr Leghari and Ms Bhutto on the eve of her departure had resolved outstanding differences between the two, which include issues such as the right of appointment of senior judges and tougher anti-corruption laws. Mr Leghari is also believed to be concerned over growing lawlessness in parts of the country and worsening economic trends.

versy surrounding the killing of Ms Bhutto's brother is likely to intensify after the death on Saturday of a Karachi police officer, who was among the police involved in the shoot-out in which Murtaza Bhutto died. Police said the officer committed sui-

In New York, Ms Bhutto is expected to be joined by Mr V.A. Jafarey, her adviser on finance and *de facto* finance minister, who began talks with IMF at the weekend. Mr Jafarey left Islamabad without confirming whether he took with him a package of measures which might meet the Fund's differences with Pakistan. These led to the IMF suspending a third tranche of the standby facility after the country's June

The Fund was dissatisfied with the budget, arguing in particular for more realistic targets on tax collections. The Fund also wants Pakistan to cut expenditure, adopt radical measures for keeping its budget deficit under control and expedite the privati-

sation programme.

Ms Bhutto is due to meet Mr James Wolfensohn, the World Bank president, and Mr Stanley Fisher, the IMF's deputy managing director, in New York on Thursday, while there to address the UN General Assembly. She is expected to seek financial support from both institu-

Pakistan is dus to make repayments on commercial and sovereign foreign dsbt worth at least \$400m within the next three months. The country's foreign currency erves are around \$1.4bn and the trads account is already in cumulative deficit of \$500m for the first two months of the fiscal year starting in July.

Pakistani analysts and The president's recent media have suggested that if the country's sharpening financial difficulties remain unresolved they could pose a direct threat to Ms Bhutto's govarnment, perhaps prompting Mr Leghari to use his powers and install an interim technocratic admin-

However, bankers suggest Ms Bhutto may have limited fiscal room to meet IMF strictures given the present structure of state finances. "The government must cut spending, but they have lit-tle leeway to do it," said a banker with a foreign institution. "Defence spending they can't touch and financing of government debt they can't touch - and together that's almost two thirds of

Cutting the fiscal deficit seen as India's priority

P. Chidambaram, New Delhi's finance minister, talks to Peter Montagnon about his hopes for tax reform

n terms of their physical presence there could scarcely be a greater contrast between Mr P. Chidambaram, India's present finance minister, and his predecessor in the Congress (I) government, Mr Manmo-

Whereas Mr Singh's rumpled appearance, as well as his pensive and soft-spoken diffidence, betrays his academic origins as a professor of economics, Mr Chidambaram has the assured and deft demeanour of the Harvard-educated lawyer that he is. A youthful 51, he comes across as much more a poli-

In terms of their economic philosophy, though, there is less to choose between them. Mr Chidambaram, leader of a small political party from his home state of Tamil Nadu, was once part of Mr Singh's team of economic reformers. His job, as he sees it, is to continue that reform. But as finance minister in a coalition of leftwing parties he will need all his political skills to see the task through.

Within weeks of taking office he received a resounding thumbs down from local financial markets for his first budget. It allowed for a deficit as high as 5 per cent of gross domestic product compared with 4.5 per cent, which the World Bank sees as the maximum permissible to stabilise India's large pub-

lic debt, secure growth and But it was still widely perceived as unrealistic for its assumptions on economic growth, tax revenues and privatisation proceeds and politically inept for its effort to tax large corporations, many of which pay no tax.

In London at the weekend on his way to Washington for the International Monetary Fund annual meeting, he was as unrepentant as the most accomplished poli-tician. The targets could be met, he said, and tax reform

possible. Getting the fiscal deficit down was the government's first priority, more important even than boost ing the infrastructure, whose inadequacy has become a "tremendous cost on growth", he said.

frequently cited as a cause of the double-digit real interest rates which companies must pay for bank loans. Even the central bank has warned the country could face a debt trap if it is not dealt with. The task of lowering the

Subic port row likely | Short-selling of shares to embarrass Manila to start in Malaysia

The row between President Fidel Ramos and Subic Bay freeport - the Philippines' fastest growing export zone - on whether to choose Hong Kong-based Hutchison Whampoa or a local company to manage its fast-expanding port has flared up at an awkward moment for the Philippines.

Subic's preference for Hutchison, which it says put forward a better business plan than International Container Terminal Services (ICTSI), the Philippines' largest container handling group, which also bid, has twice been overruled by President Ramos, most recently last Friday. The controversy, which centres on the fact

that - at \$57 per 20ft equivalent unit (TEU) -ICTSI's bid was more than double the value of Hutchison's, could tarnish the country's reputation just weeks before it hosts the leaders' summit of the Apec (Asia Pacific Economic Co-operation) forum.

In an accident of timing which could prove acutely embarrassing for the Philippines, the 18 heads of state are to hold the annual summit at Subic Bay freeport on November 25 in recognition of the zone's much-praised recent successes. The freeport, which until four years ago was home to the largest US naval base in Asia before the US withdrew in the face of a hostile Philippines congress, has attracted more than \$1bn in foreign investments since 1998 and become a symbol of the country's newfound economic vitality. But for Mr Ramos, who has made great

play of the fact that the Apec meeting will focus the international spotlight on the Philippines and has used it as a stick to prod vital legislation through congress, Subic Bay has turned into a symbol of disobedience. The freeport, which initially cited a little known "competition circular" to bar ICTSI from the 25-year contract, has now lost control over choosing the winning bidder.

In spite of being instructed by Mr Ramos to ignore the competition rule - which stated that no one port operator in the Philippines could control more than 20 per cent of a rival port - Subic upheld its decision to choose Hutchison over ICTSI last week. ICTSI, which handles about 70 per cent of the country's international container traffic, then appealed to Mr Ramos, who removed Subic's right to choose the contractor.

The row, which could continue for weeks hinges on the president's contention that the Philippine taxpayer would lose up to 6bn pesos (\$230m) a year if Subic opted for Hutchison's lower bid. However, Subic officlals argue that Hutchison's bid would net higher revenues because it would generate larger volumes through more efficient management and higher investment in the port.

Whether Mr Ramos rules in ICTSTs favour or not, the affair has led to suspicions that discrimination against foreign companies is still rife. "Nobody believes that Hutchison could have kicked up such a fuss or caught the president's eye if Subic had chosen ICTSI instead of Hutchison," said a foreign executive in Manila yesterday.

In Kuala Lumpur

Tightly regulated shortselling was scheduled to begin today in 50 of the most figuid shares listed on Malaysia's stock exchange, the liggest in south-east Asia. Fund managers said that while "short-selling" - selling shares with a pledge to buy them back at a future date in expectation of a fall in its price - was likely to be limited for the first few weeks, the new rules pro-

vided an important new hedging mechanism and a way of taking profit in a falling market. It may also help speed up the long awaited introduction of options trading on the futures market. There is no date fixed for options trade to start but analysts say it may begin

within six months. Short-selling has been going on in an unauthorised way for some time not only in Malaysia but also Hong Kong and Singapore, brokers said. Today however, will be the first day of authorised trade and is the latest step in

efforts by the government to include market capitalisabroaden and deepen its financial markets to become a regional financial hub. The reform was welcomed by fund managers and operators of Malaysia's futures

Options and Financial Futures Exchange. Securities analysts said short operations, may help boost the turnover in futures contracts, breathing fresh vigour into a market which has averaged lacklustre volumes since it was launched

exchange, the Kuala Lumpur

in November last year. Expected arbitrage operations between cash and futures marksts should bring futures prices into line with cash prices. Until the past week, futures have been trading at a significant discount to cash.

The 50 companies in which short-selling has been approved include the country's best-known groups, including Telekom Malaysia, Tenaga Nasional, Petronas Gas, Malayan Banking. Sime Darby, Genting, Hicom, Proton. Renong and Public

tion exceeding M\$2bn (US\$800m), at least 100m shares in the public float, at least 2,000 registered shareholders and five years of uninterrupted profit after tax. The stringent criteria were devised to reduce the risk of a short squeeze and cornering.

In order to engage in short-selling, an investor must first borrow the relevant scrip from an authorised Securities Borrowing and Lending (SBL) agent. It is not yet known which brokerage houses are authorised SBL agents, Also, only those brokerage houses which have exhibited that they are abiding by "know your customer practices" as outlined by the Kuala Lumpur Stock Exchange (KLSE) will be allowed to conduct

To ensure a high degree of transparency, regulations say brokers must report new short positions by 6pm on the day after the position was taken and the KLSE must make public all short Bank. Selection criteria positions within two days.

short-selling.

Netanyahu seeks to regain initiative US and EU

By Judy Dempsey

Mr Benjamin Natanyahu, the Israeli prime minister, was yesterday trying desperately to regain the political initiative as he and Mr Yassir Arafat, president of the Palestinian Authority, prepared to attend a summit in

Washington tomorrow. Although Mr Netanyahu has said repeatedly he would not reward violence after four days of violent clashes in the West Bank, Gaza and Jerusalem, his room for manoeuvre is becoming mgly restricted.

This is not only because of mounting international pressure on him to return to the negotiating table and start implementing more conditions set out in the 1995 Israeli-Palestinian Interim Agreement. It is also because his Likud party is far from united behind e leader elected not by its members but by direct popular vote, the first time in Israel's history.

The most recent signs of a rift, if not resentment about Netanyahu's style of weeks ago in a cabinet meet of political science at partners, has itself only 32

ing when several ministers complained they had not been consulted ebout his plans for the future of Israeli troops in the West Bank town of Hebron and the tardy fashion in which Mr Netanyahn informed them of his meeting with Mr Arafat

Then last week, during the

height of the demonstrations and violence throughout the West Bank and Gaza which were sparked off by the opening of a tunnel in the old city of Jerusalem, Mr Yitzhak Mordechai, tha defence minister, broka ranks. He remarked that perhaps not all factors had been taken into consideration with regard to the opening of the tunnel.

earlier this month.

Mr Mordechai does not yet pose a direct challenge to Mr Netanyahu, since he owes his position to the prime at the last minute before the election campaign having been passed over as chief of staff under the former Labour government, "But dovish elements in e very disunited party," said Mr Avraham Diskin, professor

yahu's relations with the military establishment outside the party have to be quickly restored, following criticism by General Amnon

Lipkin-Shahak, chief of staff, who said he had not been

tainly hawkish but Shas did not openly support Likud in the elections and supported the government only in return for cabinet posts. Yesterday Rabbi Yosef held talks with Mr Shimon Peres, former Labour prime minister, which reportedly dealt with the possibility of e

national unity government. But while Mr Netanyahu has to keep the doves on board - particularly since Likud, which relies on a motley collection of coalition

Hebrew University in Jeruseats in the Knesset, two salem. Indeed, even Mr Netan- has to placate the ultra-conservatives in his own party. These include Mr Ariel Sharon, infrastructure minister, and Mr Raphael Eitan, agriculture minister.

Yesterday Mr Sparon, who was visiting Jewish settlewino said he had not been informed about the timing of the tunnel's opening, despite the security implications of such a decision.

Rabbi Ovadia Yosef, spiritual leader of Shas, the Sephardic ultra-Orthodox party which has 10 seats in the 66-seat governing coalition, may be another weak link for Mr Netanyahu. The rabbi's constituency is certainly hawkish but Shas did can see the pressures in Likud. It will be difficult to see how Netanyahu will keep all the actions behind him," said M. Diekin.
In an ironic way, much

depends on Mr Arafat. By proving, as he did in the past two days, that he can control his forces and keep young Palestinians from ventilating their anger against Israeli soldiers, he could take the winds out of the hawks' sails by showing discipline among the Palestinian police forces does exist. But equally, there

to eliminate tariffs on IT

By Anne Counsell in Seattle

The US and European Union compromise to resuscitate an agreement to eliminate tariffs on electronic products, including semiconductors, scomputers, software and telecommunications equipment, by the year 2000.

The information technology agreement (TTA), e market access deal to liberalise trade in information technology, was precariously near collapse last week when it became entangled with the US-Japanese accord to form World Semiconductor Council (WSC) and e run-

ning EU-US row over high EU semiconductor tariffs. But at a weekend meeting of the Quad - trade ministers from the US, EU, Japan and Canada - e compromise was reached on an ITA for inclusion at December'e World Trade Organisation ministerial meeting in Singapore. thereby setting an agenda for other WTO members to

sign up to the accord.
Under the Quad compromise, the EU has agreed to eliminate its semiconductor tariffs before joining the WSC, and the US will postpone formation of the council to coincida with the implementation of the ITA both taking place simultaneously in March 1997.

. Sir Leon Brittan, EU trade commissioner, called the weekend meeting "the logjam breaking Quad" and said: "Our disagreements relate to the past, our agree-ments relate to the future." He said the EU had invited Quad members to Geneva on Thursday this week to continue talks and momentum

on the ITA. His upbeat assessment was echoed by Ms Charlene Barshelsky, acting US trade. representative, who said the Quad accord would provide the way forward for an ITA to serve as a broader market Jurek Martin Singapore WTO meeting.

EU and US trade officials. however, said potential stumbling blocks remained have made an 11th-hour Noting that the EU had on previous occasions backed away from its commitments an ITA, the US expressed reservations the EU might attach other trade issues to the ITA at a later date.

Saparately, the EU har-bours residual doubts on the extent of US commitment

'Disagreements relate to the past, our agreements relate to the future

tion technology liberalisation and is wary the ITA may be restricted in scope.

In a further effort to kickstart implementation of outstanding issues on the world trade agenda, Quad members said they would reactivate stalled talks on a global telecommunications accord by improving their market access offers in an effort to secure a critical mass of ecceptabla offers by the

deadline of February 1997. Both the US and EU said they would submit new and improved offers on telecommunications access to spur other countries to follow suit, in the hope of averting e repeat of the stand-off last April when the daedline passed with an insufficient number of acceptable offers

to complete an accord. The Quad meeting elso reached agreement on other less contentious issues and reiterated its commitment to achieving market accese agreements on financial services and accountancy in 1997. It also urged that an eccord on zero tariffs for pharmaceuticals could be expanded to include other industries and products.

Dole fails to dent 'President Schlickmeister'

aseball's regular sea-son ended yesterday, sending 20 of the 28 major league teams home for the winter. US newspaper sports pages will thus be rithout much of their staple diet, the box scores of the

previous day's games The US election season has another 36 days to run, which means its version of box scores - opinion polls in each state - remain required reading. Polls may not be infallible but they are, for better or for worse, a crutch for those who report and analyse which candidate is up, who is down and why.

The handiest compilation is published weekly by The Hotline, a political newsletter. Its latest will not have brought joy to the campaign of Mr Bob Dole, the Republi-

Ġ,

including Washington DC. with two statistical ties (Texas and Virginia, neither of which has gone Demo-cratic in the last 20 years).

Most states were not even close, with the president holding leads beyond the standard margin of polling error, normally defined as double digits, in 29 states. These figures have not

changed much in a month. It paign managers. is, therefore, not surprising that the mainstream US media, in writing the words that go with the box scores. has hardened in its opinion that Mr Dole has virtually no chance on the first Tuesday of November.

Two broad strains of coverage have emerged. One, inevitably, consists of early post mortems of presumed sation, poor speeches, etc. The other increasingly casts Mr Dole in a curiously sympathetic light, as if he were somehow disconnected from his own campaign.

Mr R.W. Apple of the New York Times noted that Mr Dole, legendary for his caustic and iconoclastic wit, has become "almost bland", either of his own accord or on the advice of his cam-

"He gives the impression of 'a man in a box', unable to be fully himself." Ms Maureen Dowd, colum-

nist for the same newspaper, wrote; "It isn't really e campaign any more. It's something more interesting, more absurd, more dark, an inarticulate elouching around cornfields in Ohio and half-It found President Bill ares - bad planning, organi- bed timing and bad meta- remain wanting.

Debt relief IMF ponders monetary union

By George Graham .

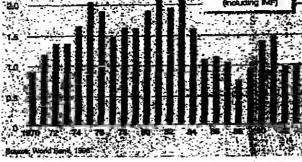

Monetary union is used to top hilling at meetings of European finance ministers, but this weekend it made its debut on a wider stage as the world's finance ministers gathered in Washington for annual meetings of the International Monetary Fund and the World Bank.

The US and Japan have until now tended to regard Emu as a purely European affair, but at this weekend's meeting of finance ministers and central bank governors from the Group of Seven leading industrial nations, a prelude for next week's IMF meetings, they began to explore for the first time the consequences of the introduction of a new leading international currency for the world financial system.

'If you get an Emu, obviously there are a lot of issues that need to he thought through with

Percentage of recipient CIVE Riisteral (natuding grants

around the world that currently have the D-Mark as a reserve currency will react to the euro as a substitute. said Mr Robert Ruhin, US

Emu also took a promitional advisory committee of the Federal Reserve Bank of New York on Friday. about the euro," said Mr

Both finance ministers and commercial bankers from the European Union have been struck, nevertheless, by the lack of preparation in the US and Asia for Emu, an event which is now little nent place in discussions at more than two years away.

a meeting of tha interna"Our impression is that

outside Europe there is a tremendous lack of information the euro would have a stronger role as a reserve currency than the D-Mark.

Although countries outside Europe are clearly less directly affected by Emu, Mr Hans Tietmeyer, president of the German Bundesbank, warned that they ignored the consequences of the introduction of the single currency at their peril.

"It is important that it is not just in the interests of the interests of the Americans and the Japanese. The euro will have consequences for the dollar as a reserve currency," Mr Tietmeyer said.

Mr Tietmeyer said the G7 meeting had agreed that axchange rates were now "significantly better aligned with economic fundamentals than in the past".

But he warned that this made it even more important that the new European cur-

Theo Walgel, German the D-Mark; that meant its finance minister, adding that introduction must not be put criteria for participation must be strictly enforced.

The move from national currencies to a single European currency was in itself an element of uncertainty, Mr Tietmeyer said, and that contributed to the steepnes of the yield curve for European interest rates.

"Anyone who argues for a relatively loose interpretation of the Maastricht critethe Europeans but also in ria must say what that would mean for the interest rate structure," he said.

The G7 meeting delivered confident assessment of the world economy as a whole, arguing that conditions appeared to be in place for a strengthening and broadening of economic growth into 1987. Throughout the G7 countries, infla-

tion remains at low levels, efforts are under way to reduce fiscal deficits and external imbalances have

By Michela Wrong in Dar-es-Saleam

Tanzania's President Benjamin Mkapa is coming under intense pressure from parliament to sack his finance minister, now in Washington for talks with the International Monetary Fund, over his involvement in a tax exemption scandal.

In what is seen as a test case for Mr Mkapa's muchpublicised campaign against official corruption, a parliamentary select committee is calling on the president to ensure Prof Simon Mbilinyi, a key figure in the country's economic reform programme, is "made accountable" for clear malpractice.

"If he is not made accountable we won't just sit back and be disappointed," Mr Iddi Simba, a member of the ruling Chama Cha Mapinduxi (CCM) party and chairman of the committee, said. "I shudder to think what perliamentary action we will take if nothing happens." Last Tuesday, the select

committee made public a 42page report into the June affair, in which the minister is accused of granting sev-eral billion shillings' worth of tax exemptions to four companies importing edible oil into Tanzania.

The committee's findings and recommendations come at a particularly embarrass-ing time for President Mkapa. The finance minister is negotiating with the IMF. which is believed to be on the verge of lifting a freeze on funding imposed in 1994 because of Tanzania's chronic failure to collect tax revenue. An Enhanced Structural Adjustment Facil-

ity worth \$234m is at stake. A bone of contention for both the IMF and bilateral donors has been the generous granting of tax exemptions to local businesses by corrupt government officials, run-up to last October's elections to eliminate the prac-

Call for multi-year plans for budgets

By Robert Chote, Economics Editor,

The International Monetary Fund's key ministerial committee yesterday updated its keynote statement of economic best practice, arguing that governments should establish multi-year plans for budgetary policy and make their finances more transparent.

The original "Madrid declaration" drawn up by the committee in 1994 called on governments to cut their borrowing, to adjust interest rates promptly to forestall inflation, and to introduce structural reforms which would make their economies run more efficiently. However, ministers felt it was important to update the statement to hroaden its strategy and strengthen its pentation

"We agreed to get going and to leave the gold issue The new declaration argues that governments should also recognise that undertaking structural

easier. In Europe, for examunemployment and thereby make it easier to reduce gov-

ernment borrowing. The quality and composition of plans to reduce government borrowing was also emphasised. A draft copy of the declaration advocated "reducing unproductive spending while ensuring adequate hasic investment in infrastructure".

In a background report to the committee, Mr Michel Camdessus, IMF managing director, said the Fund often tailored advice on the composition of fiscal retrenchment programmes to the size of the public sector in the country under review. It has told France, Ger-

many and Sweden their public sectors are too hig and government spending must be cut relative to the size of the economy. In the US the IMF has emphasised the need to postpone tax cuts,

rate and hudget aetting recently on efficiency grounds for a broadening of ple, liberalisation of labour the base of incomes, profits markets would halp out and spending which are and spending which are taxed in the US.

The draft committee declaration also urged governments "to improve education and training, to reform public pension and health systems to ensure their longterm vishility and enable the provision of effective health care; and to alleviate poverty and provide well-targeted and affordable social safety

"It is essential to enhance transparency of fiscal policy by persevering with efforts to reduce off-hudget transactions and quasi-fiscal deficits," the draft declaration added.

Misalignments in key exchange rates should be avoided, the committee argued. The declaration said: "Implementing sound macroeconomic policies and avoiding large imbalances are essential to promote financial and exchange rate stareform will make interest although it has argued bility." It made no explicit

reference to the use of central bank intervention to tackle misalignments.

Soundness of banking systems should also he ensured by toughening prudential regulations and supervision, improving co-ordination, better credit risk assessment, stringent capital requirements, timely disclosure of banks' financial conditions, prevention of money laundering and improved management of banks, Mr Kenneth Clarke, UK

chancellor, told the committee the IMF should pay specific attention to weaknesses in countries' anti-moneylaundering regimes in its regular "Article Four" health checks on economic policies. He also urged more countries to follow his exam-ple in publishing the preliminary conclusions of their Article. Four discussions with the IMF.

Mr Clarke also called for a revision of the IMF's articles of agreement aimed at giving it an explicit mission to encourage further capital multilateral trading system". I tica.

account liberalisation and to help members secure the benefits of free capital movements. He said it was wrong that the articles currently permit - and in some cases even encourage - countries to impose controls on capital account transactions.

Mr Camdessus's background review of recent Article Four discussions also conceded that countries with persistent, moderately high inflation (around 10 to 40 per cent a year) might have tackled inflation more effectively had the IMF explained in more detail costs and benefits of disinflation rather than taking it for granted that slowing the rate of price rises was a good thing. The Committee declara-

tion urged "consolidating the success in bringing inflation down and building on the bard-won credibility of monetary policy". It also pushed for "maintaining the impetus of trade liberalisation, resisting protectionist measures and upholding the

THE FUTURE OF REGIONAL AIRLINE TRAVEL IN EUROPE. EMBRAER'S NEW EMB-145.

The profit maker is here.

The EMB-145 provides jet performance, high dispatch reliability and operational flexibility all for the price of a turboprop. Designed to enhance the profit picture for regional airlines throughout Europe, the revolutionary new 50-seat EMB-145 has the lowest acquisition cost of any new jet airliner. Its advanced design and engineering yield direct operating costs comparable to a turboprop on virtually any route.

And passengers will find the widest aisles of any aircraft in its class, plus generous head room and seat pitch for unmatched comfort on every flight. With the EMB-145, regional arrines will finally have the ability to profitably provide comfortable all-jet service to whatever destinations they fly.

Strong ties to Europe's aerospace industry.

With European suppliers and risk-sharing partners such as GAMESA of Spain, SONACA of Belgium, along

with ENAER of Chile providing over 50% of its content, the EMB-145 is truly an international aircraft with strong European ties. And, with first deliveries just a few months away, you'll soon be seeing the EMB-145 in the skies over Europe. Today, however, you'll be able to personally inspect this remarkable new aircraft when it touches down during the European leg of our 1996 World Tour. And what you'll discover is a new airliner that will forever change the way regional airlines and their passengers will fly. It's history in the making - and it's just arrived.

European Union social chapter

Warning will be sent to companies

Chief Political

The British government will today go over the heads of its European Union partners by issuing a pan-European pamphlet to tens of thousands of European compa-nies outlining Britain's reasons for remaining outside the social chapter.

Ministers acknowladged that the initiative, endorsed by the cabinet last week, is designed to wrest back the initiative on EU policy after two weeks of bitter division

over monetary union. "This is the kind of Euroissue we must all rally round, becausa wa're all united against the social chapter," said a senior party official. "We're eending a warning shot to member states that we're not prepared to see our opt-ont dilnted in any way or to allow regulations to be intro-duced by the back door."

The 16-page booklet, to be launched by Mr Ian Lang, businesses, as well as to all ne MPs and members of tha European parliament. The document will also be transleted into French, German, Spanish and Italian and distributed to at least as many

companies across the EU. The tone of the document is likely to annoy some

Perón's strange hybrid of nationalistic, militaristic populism, which owed much to ideas picked up in Mussolini's Italy, built its foundations on unions thet were both powerful yet ultimately controlled by the Peronist.

machine. Menem this week served notice that this cosy relationship is to be terminated. Collective bargaining will be scrapped and long-defended workers' rights weakened in an effort to tackle near-record unemployment of 17 per cent.

Menem's very tone has changed. He dubbed this week's 36-hour general strike - judged by the media to have been one of the biggest industrial protests since the turbulent 1970s - as a "holiday stoppage", an excuse for a four-day weekend.

The tens of thousands of people who marched on the Plaza de Mayo represented, in Menem's opinion, a pathetic turnout that would be surpassed by this week-end's footballing encounter between Boca Juniors and River

Menem baulks at the sugges-tion that his attack on the unions, his privatisation of everything Peron nationalised, and bis radical overhaul of Peronist foreign policy, mark a break with the great general's principles.

Peronism, his aides explain, is a pragmatic doctrine that seeks "the grandeur of the nation and the well-being of its people". If Peron were alive today, facing the dictates of a globalised economy, he would be doing exactly the same.

That may be, it would nevertheless, be ironic if, just as Peron's remains were being lifted from his tomb, the last vestiges of his political legacy were being finally laid to rest.

The Monday Profile: Serge Tchuruk

The demure Holgado holds up

Holgado, who bears an

uncanny likeness to Peron, has

persuaded Argentina's Supreme

Court of her right to yank him

from his tomb again, a spectacle

rightful inheritance.

Vision of two worlds merged

Mr Serge Tchuruk has a singular vision of the future of warfare, Far from the nuclear Armageddon envisaged by many, the Alcatel Alsthom chairman sees precisioo, increasingly hi-tech conflicts in which virtually no one - friend or foe - gets killed.

The prime aim in such "cyber" battles would be to disable the enemy's central communications system. "It is something the Chinese have understood for thousands of years. The art of making war is to stop the other side being able to make war."

This, in a few words, explains wby the bead of one of the world's leading telecoms equipment groups is so keen to add Thomson, the French stateowned defence and consumer electronics group, to his already diverse collection of businesses. "Communications techniques ... are becoming the key to defence systems", he says. "Our thesis is that telecoms and

coming together." It is a beguiling concept - particularly when expounded by this trim, Marseilles-born 58-year-old former oil company executive. But the prospective combination of the two companies was not something initially that went

defence are two worlds that are

down well with the markets. Over a near six-month period from close of trading on March 28 when he made his interest in Thomson public until earlier this month - the price of Alcatel shares on the Paris stock market slid from more than FFr450 to well below FFr400.

This was a period, however, when the Alcatel chairman largely kept his own counsel about his strategic thinking - a tactical gambit in marked contrast to the spproach adopted by Lagardère, the missiles-to-magazines conglomerate that is his rival in the bidding process.

Since he broke his silence on September 18, the shares have rebounded to FFr430 - helped also by half-yearly results that appeared to confirm the group

problems of recent years. Though too long delayed in the eyes of many, the public relations offensive of the past 10 days - prosecuted with Mr Tchuruk's characteristic charm and thoroughness has been undeniably effective.

But there is a long way to go before the shares approach their early 1994 peak of FFr902, and it would be wide of the mark to suggest the Alcatel chairman had succeeded in removing all doubts. There are at least two factors which some still fear might to some degree compromise Mr Tchuruk's commitment to maximising value for his shareholders. The first is ego.

to the same IEA volume.

The second is politics. Has hs become too mesmerised with the idea of running a vast European industrial powerhouse capable of building everything from TV sets to nuclear power stations? Will the decisions he takes be influenced to an undesirable extent by

French government? The feeling from the past 10 days is that there is less to worry about on the first count than the second. Mr Tchuruk has spoken convincingly of his desire for a decentralised organisation capable of creating value hy means of technological transfers between its main activities and exploiting

"We must build enterprises that have their own real autonomy", he says of the planned "large" international partnerships" in the defence, consumer electronics and electromechanics sectors that would be set up if Alcatel's Thomson bid succeeded. "I have no pretensions to be a federa-

It has become clear that the Alcatel chairman has thought deeply about these partnerships, which ha believes are "difficult to manage", and has strong views on how they can best be made to work. Better in his view a small number of large wide-ranging partnerships than "a proliferation of joint ventures in speci-

alised niches". If all goes according to plan, Mr Tchuruk's empire will incorporate stakes in a number of politically-sensitive husinesses It is asking a lot to believe the French state, with its fondness for strategic planning, will give him and his partners a free hand where

these are concerned, Already some detect political influence in Mr Tchuruk's confirmation that the partner the group plans to seek in the defence field would be European and not, say, Hughes Electronics or Raytheon of the US. Pressed on the point, the Alcatel chairman acknowledges it is "not always best perhaps to have European partnerships" but adds that he has to be "practical".

But he bridles at any suggestion that the main reason for his interest in Thomson Multimedia, Thomson's money-draining consumer electronics business, is the state's desire to sell the defence and consumer electronics arms the strategic priorities of the together. "I assure you that it is good for Alcatel." The consumer electronics industry is at "the end of the analogue era and the beginning of the digital one ... We want to help Thomson Multimedia to attack the evolution towards digital technology with force.

FT GUIDE TO

Heart disease

What is wrong with Russia's president, Boris

He has had a number of heart attacks - probably three – which have caused permanent damage to his heart muscle. At the same time, the coronary arteries that supply blood to his heart are furred up with fatty deposits and blood clots.

It sounds as though he is lucky to be alive. Yes: 40 per cent of people are killed by their first heart attack and only a small minority survive

Could Yeltsin be restored to good health? The president's star-studded medical team, which now includes veteran US cardiologist Michael DeBakey, is planning to carry out a triple or quadruple heart bypass operation later in the autumn, after he has recovered further from the shock of his heart attack during the summer election campaign. Surgeons will remove three or four stretches of vein or artery from elsewhere in his body (the leg or chest) and graft them on to the coronary arteries, hypassing the diseased areas. Blood can then flow more freely to the heart, and the risk of future heart attacks is

What are the chances of success?

The world's heart surgeons have carried out several million bypass operations since the procedure was developed in the 1960s. The average risk of dying as a direct result of the surgery is less than 2 per cent. Most patients are enjoying an improved quality of life five years later. However. Yeltsin's heart may have been weakened seriously and irreversibly by his unusual series of heart attacks, each of which will have killed some muscle and caused scarring.

If the operation succeeds, could Yeltsin resume active work as president? His physical activity is likely to be limited by his

weak heart, and many people suffer from depression after surviving a heart attack. But Yeltsin's intellectual capacities will probably not be affected, so there is no reason why he should not

Isn't the stress of the Russian presidency likely to give him another heart attack? Contrary to popular belief, there is no clear scien-

tific evidence that a high-pressure job increases susceptibility to heart disease or makes a heart attack more likely. Indeed, people in repetitive manual occupations, who have little control over their working lives, are at greater risk than those

What are the important risk factors, then? Biggest of all is age. The risk of suffering a heartattack increases rapidly as you grow older.

and so does the risk that the attack will be fatal. Deaths among the 65-84 age group are 10 times greater than among the 45-64 group. Your genetic inheritance plays a vital role, too. Susceptibility to heart disease depends on many different genes interacting with environmental factors.

But no one can do anything about their age or their genes. How can Yeltsin – and the rest of us – reduce the risk of heart attacks in practice? Even people in late middle age with a genetic susceptibility to heart disease can reduce the risk through a change in lifestyle. For a smoker, the overriding priority is to give up at once. The effect of smoking on the beart is less obvious than on the lungs, but is serious. The British Heart Foundation estimates that 24 per cent of deaths from coronary heart disease among men and 11 per cent among women are due to smoking. And anyone, whether a smoker or not, can ensure his or she eats a healthy, balanced diet: high in fruit and vegetables, and low in animal fats.

What about drinking alcohol?

There is overwhelming evidence from several studies that drinking moderate amounts - say, two or three glasses of wine a day - reduces the risk of a heart attack. Apparently, alcohol in the blood helps dissolve fatty deposits before they can block a vital artery. Doctors and health authorities are reluctant to broadcast the "alcohol is good for yon" message too loudly in case it encourages. people to drink excessively. There is no donht that long-term heavy drinking damages the heart as well as the liver, brain and other organs.

Can drugs help?

Yes, doctors prescribe a wide array of drugs to help prevent heart attacks. They include products that thin the blood and reduce clotting, such as aspirin and heparin; anti-hypertensives to bring down high blood pressure; vasodilators to open up: narrow blood vessels; and anti-arrhythmics to make the heart beat more evenly. The market for cardiovascular drugs is worth \$10bn (£6.4bn) a year in the US alone.

Are there any prospects for reducing the terrible

toll from heart disease? Although heart attacks kill more people worldwide than any other single thing - more than 4m year - the death rate from heart disease is falling in most industrialised countries. Factors responsible include healthier diets, less smoking and better medical treatments. But we all have to die of something eventually, and heart attacks are likely to kill millions each year for the foreseeable

Serving up a poor man's feast

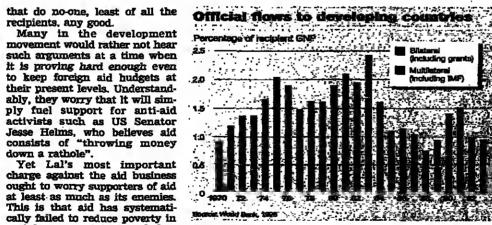

A new approach to overseas aid should ensure resources are better targeted

G7 finance ministers at today's World Bank annual meetings in Washington will be promising a "new beginning" for the world's poor. After years of soul searching, they are offering to help some of the poorest countries offload s small chunk of the Woods institutions and other official donors.

The deal bas rightly heen hailed as a breakthrough. But it is also a belated admission of the obvious - namely, that there are countries which are now too poor, and too burdened by existing debts, to stand a chance of ever growing out of the problem by themselves. The question is what else follows from this unhappy truth.

For aid organisations such as Oxfam and Christian Aid, the answer is plain. There should be more debt relief, much sooner than the World Bank, the IMF and the Paris Clnb of official creditors have promised, with far fewer strings attached. In addition, rich countries ought to reverse the long-term decline in overseas development assistance and redouble efforts to ensure help reaches those who need it.

Others draw a different conclusion: that we should not merely write off poor countries' debts but write off the business of giving foreign aid altogether. "Foreign aid", argues the economist Deepak Lal in an article in a looked at cross-country data volume published last week by since 1970 to establish whether the Institute of Economic an additional pound sterling of Affairs, "is an idea whose time has gone". He believes that aid programmes are an anomaly left as income, infant mortality or

propped up corrupt governby and large, it had proved ing as a share of GDP. extremely ineffective at improv-That the World Bank and oth-

highly effective programme. Taking account of the fact that aid tends to go to countries that it is because the money has been aid led to an improvement in basic indicators of poverty, such over from the inter-war period education. His answer was that, the form of higher state spending them even less domestic not

are open to dispute. But few disagree with the hasic message:

Yet Boone did not find that all anti-poverty programmes were pointless. Far from it. He thinks that specific projects such as the worldwide immunisation programms, and many individual World Bank health care projects, have made an important contribution to reducing poverty. The trouble is that only a small share of the official aid given to governments has actually heen already been moving in this spent on this kind of cheap but

Where aid fails, Boone argues, ploughed into pet projects which only profit a select group of government supporters. Tellingly, be finds that although aid does not generally seem to have benefited the poor, it has tended to benefit recipient governments, in governments is by any reckoning an admission of defeat. The underlying assumption is that the countries concerned are not in a position to develop into normal functioning states. All we can do is to help shore up small pockets of the country which can be kept out of the government's Boone's research does not con-

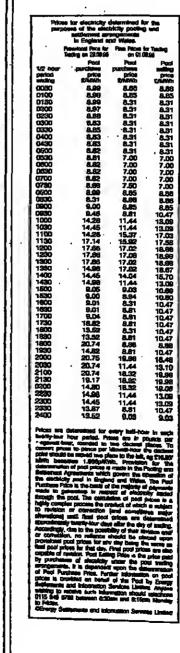

demn us to such a pessimistic approach. There are, as he shows, plenty of successful aid programmes working around the world, many of them administered by governments. The trick will be to reorientate aid programmes to target money at governments that can be counted on to spend it effectively, and not to be afraid of denying money to those who do not.

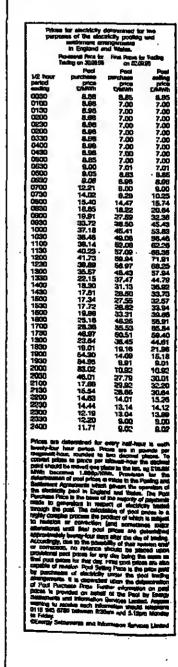

help. More important, hypassing

Miserly though it is, the new multilateral debt initiative effectively takes just such an approach. It will take continued pressure by debtors and their supporters to ensure that the G7 leaders' stick to their promises. But the premise on which the

programme is based, that it is worse than pointless to belp governments which are not dsdicated to improving the lot of the entire population, is the right

The devslopment community cannot afford to be dsfsnsive about the faults of aid programmes, or about the governments that administer them. Others are only too happy to believe that aid is throwing money down a rathole. It is up to its supporters to ensure that It is

MANAGEMENT

t is not every day that a company is saved by a chief executive with a chainsaw. But that is what happened at Porsche, the German sports

When Porsche was on the brink of collepse in the early 1990s, its desparate managers called for advice from Japanese manufacturing experts.

Chihiro Nakao, a former top engineer at Toyota Motor, toured the Stuttgart plant and decided it needed complete reorganisation. Among other things, he said workers were being swamped by the piles of parts stacked on racks high above the shop floor. "Where's the factory?" be asked. standing in the middle of the pride of German engineering.

This is a warehouse." Nakao ruled that the excess stocks had to go - and that they had to be removed in a way which drove home the message that life in the plant could never be the same again. So be asked Wendelin Wledeking, then Porsche's chief executive and now chairman, to come with him to the engine assembly room and bring a chainsaw. Surrounded by Porsche staff, Nakao asked Wie deking to go down the aisles and cut the height of every storage

As Manfred Kessler, a man-ager, remembers: "It was the defining moment. Historically, senior manegement never touched anything in the plant and no one ever took such drastic actions so directly and quickly." By the end of the week, the parts inventory in the engine room was reduced from 28 days' eupply to seven and Porsche had taken the first step towards the most radical restructuring in its history.

The reconstruction of Porsche is one of the many stories told with great skill in Lean Thinking by James P. Womack and Daniel T. Jones, who established themselves as leading analysts of manufacturing with a previous book on the motor industry - The Machine that Changed the World.

The Machine was a clarion call to the American and European motor industries, warning executives they faced being left behind hy the manufacturing advances achieved by their Japaneee rivals, especially Toyota. It struck e powerful chord and helped to prompt the industry's wholesale reconstruction.

Lean Thinking, which is published today, tries to break new ground. It argues the lessons learnt from Japan in motors can be epplied in other manufacturing industries and in services. It says the key is to eliminate waste - including excess inventories of goods and parts, unnecessary movement of parts and workers. idle time during the production process, and producing goods and

services which fail to meet cus-

Jones and Womack argue waste elimination must be pur-sued not only in production, but also in product development. sales and all other departments. "Lean thinking" is their term for bow this is to be achieved. It needed will actually be made. product that determines its value to a customer and bow this value is created in a "value stream". which is all the processes applied

to its production and sale, The authors argue that "value streams" extend beyond a single Browley

Stefan Wagstyl on two authors' crusade for a trimmed-down, waste-free means of production

The allure of a leaner figure

company up and down the production chain. They say that in order to make this stream efficient, excess stocks must be eliminated along the chain by introducing just-in-time delivery wherever possible. The importance of just-in-time delivery is not just to cut the cost of inventories. It is also to ensure that information - for example, about sales patterns or quality problems - is relayed as fast as possible to relevant workers. This information flow needs to be so good that products are pulled through the value chain by customer demand, not by producer bush. In this way only what is

to Toyota for pioneering these ideas in the 1950s. But they say that they must be learnt by practical experience.

Much of this is now familiar territory to followers of Jones and Womack and other writers

ular clarity. Where the authors try to take the argument forward is in setting out the case for companies to look beyond themselves in order to transform a whole value chain. This can only be done in close co-operation with sumpliers and customers through "collective analysis and action": The authors claim that this is the book's most innovative insight.

The trouble is, as they cheer fully admit, no company has yet done this, not even Toyota. So there are no examples of fully functioning lean value chains. Nor is there any detailed description of how such chains might rate. Jones and Womack specport is one example: airlines, airport authorities, taxi companies, haggage hendlers and travel agents might all co-operate to

on Toyota, although Lean Think- time spent hanging around at airing sets out the case with partic- ports. But it remains, as they concede, a dream.

They are on firmer ground in se studies of lean thinking at individual companies. Their descriptions of managers bringing change are a tour de force. As well as Wiedeking and his chainsaw, there is George David, the chairman of United Technologies of the US, wielding a metaphorical axe at the aero-engine subsidiary Prait & Whitney.

Like Porsche, P&W had spent decades building a reputation for top-class engineering. But, also like Porsche, it had run into serious difficulties by the early 1990s in controlling costs. Managers could not extract enough effiforce which was divided into 1.151 union-sanctioned job classifications. They tried to meet the challenge by investing heavily in eliminate waste - including the automation, including the pur-

chase of an \$80m state-of-the-art grinding machine complex.

Japanese experts, including Nakao, the ex-Toyota engineer, declared that, far from being part of the solution, these machines were part of the problem. The big grinders turned out a turbine blade every three minutes, but the blades they produced required painstaking preparation and cleaning afterwards. The whole process took 10 days. P&W decided to scrap the monster machine and install eight simple tooling centres for a total cost of \$18.6m and with a process time of 76 minutes

Replacing large automated cated equipment is a key technique of lean thinking. There is, say Jones and Womack, no point in doing one stage of a process quickly if it results in creating waste elsewhere.

The lessons apply equally well to smaller companies, such as Lantech, e US maker of machine for wrapping plastic around goods on pallets, with an annual turnover of \$70m. Pat Lancaster, the founder-chairman, found himself in trouble after competitors worked a way around his patents and started undercutting his prices. He realised he had to

reorganise to survive.

The company had grown by establishing separate functional departments including manufacturing, product development and marketing. The factory was divided into sections making different components which were later assembled into finished machines. Often complated machines had to be reworked to configure them to a customer's

With the help of managers familiar with Toyota techniques, Lancaster redesigned his company around just-in-time operations. This meant establishing separate lines for each main product type, with the machines set up in U-chape cells so that workers could see what other cell members -were doing. Surplus inventories were swept away, 90 was making machines for stock and reworking. In the four years to 1995, employes hours per machine dropped by 60 per cent to 80 minutes. Production time fell from 16 weeks to a maximum of five days. Delivery lead time was cut from between four and 20 weeks to between one week and four weeks. . .

Such changes do not come eas-ily. Jones and Womack say it takes five years for such reforms to become rooted in a company. Success requires immense determination, commitment from senior executives and support from trained experts - often Japanese engineers familiar with Toyota's methods - who will not work for a company unless they are convinced of its commitment. Even then, it will often take a crisis before senior executives can convince themselves and their colleagues of the need for change. The reforms require careful mapping of process to identify problems and solutions. But, say the authors, the potential rewards are enormous. Compaulate ebout how whole industries ciency gains from their vast nies which adopt lean thinking might be transformed. Air transplant, or from their their works change not only themselves but the world around them.

Fiona Lafferty

Permission to duck out for a day

are days when one's mood is so sour that the only solution seems to be to stay in bed.

Almost everyone suffers from this condition from time to time hut chooses different ways of dealing with it. Some fight it, get up and take their bad mood into work. Others phone up pleading a stomach upset.

To staff at Text 100, a PR company, there is a third option. They can take a "duvet day". Each employee is allowed two days a year when they can play hookey with their employer's

This strikes me as one of those ideas so good that there is practi-cally no chance of it catching on. The typical corporate response is

when the prospect of a day at work just does not appeal. Indeed there to recoil from anything that costs. But I doubt if duvet days do cost. If you are a skiver, you would have taken those days off sick anyway. But if you are permitted to skive, once your entitlement is used up, you might think twice about taking further illegit-

imate days.

Even those with a pronounced work cthic sometimes do personal things on the company's time. After having worked hard, they coast for a bit. But most companies simply refuse to

recognise this.

There seems to be something fundamental ebout the need to work on-off. At the beginning of the century, Frederick Teylor, the inventor of the time and motion study, found that the peostant, steady pace were mentally retarded. To work at 100 per cent

Lucy Kellaway

all the time just does not come naturally. One answer is to be more explicit about this. That way we could reassure ourselves that the periods we spend standing at the coffee machine are e vital part of doing the job. Two duvet days are not a lot. But they are e start.

Everywhere management layers are being taken out, except in the

finance sector, where new ones are being added. Last week Goldman Sachs created a new rank in its organisation which it has decided to call "managing direc-

To old-fashioned people, man-aging director sounds like a senior position, but Goldman has created 70 of them, each of whom will have at least 200 people in the company who are senior to them. They will, however, be able to lord it over the vice-presidents.

a vertiable army of 4,000 employ-

Job title inflation is running out of hand. It is hard to convey-any idea of seniority when the grandest-sounding titles are so easily bestowed on young upstarts, many of whom have only a few years' experience.

There is, however, one word that still seems to mean something, and that is "head". Only monsters have more than one head. Yet even that word has been débased, albeit grammatically. No longer can you just head something. These days you have to head it "up".

Here is a novel way of tackling stress: install futons, fish tanks and wishing wells In the office. Freemans, the mail-order comas a "perfect working environment" which will incorporate

these features. .Futons (which I always thought only marginally less uncomfortable than the floor) will be installed in special "antistress" rooms, and there will be fish tanks for stressed-out people to gaze at. Water will be the theme, with partitions thet appear to have water cascading down them, and a wishing well, which the company has cutely named "Freemans Fountain of Youth".

I wonder if Freemans could have created the same beneficial effect on its employees' mental health et rather less cost. According to e survey by Hays Accounthing that makes British workers

pany, is spending £20m building really happy is a subsidised office what it optimistically describes biscuit tin. Admittedly the people who took part in the survey were not asked if they'd prefer a foun-tain of youth. Had this been one of the options, I'd be prepared to bet e packet of chocolate biscuits what they would have plumped

> I epologiee to readers for my somewbat eggcentric edvice last week on ordering a boiled egg in France. I have now received more letters than I have eaten either hard- or soft-boiled eggs telling me that the correct phrase is un oeuf à la coque.

BUSINESS EDUCATION

tados com esta a como se en esta de la companya de

The Sloan school is creating ways to deliver lifelong learning, says Della Bradshaw

The ticket to the future

t used to be the case that two years at business school was enough to set a would-be director up for life. But the upheaval of the 1980s has taught companies and business schools if not yet the ebullient 30-year old business graduate - that managers need to be continually re-educated if they are to maintain a grip on ement practice and technology implementation.

The result has been a rise in talk of "lifelong learning". The phrase already seems hackneyed, but the concept is one that business schools have hardly got to grips with. And it is one that presents them with their biggest challenge: how to ensure their alumni stick with them in future rather than turning to other business schools or training organisations. In Cambridge, Massachusetts,

the Sloan School of Management at the Massachusetts Institute of Technology (MIT) is planning a voucher system as a way of tying students to the school Future master of business administration (MBA) students would take a fistful of vouchers on graduation which they could later exchange for courses. The cost would be built into the initial MBA fees.

The scheme could be in place as early as next year. "My own objective would be that the class of 1999 would have the vouchers," says

Glen Urban, dean of the Sloan ber of core elements has been

The voucher scheme is just one of the ways Urban has altered the graduate management experience at Sloan since his appointment three years ago. It is just two years ago since the

MBA was introduced. Before that students had to write a thesis and received a master of science degree. In an attempt to make the courses more practical, the num-

reduced from 13 to six, completed in a single semester rather than a full year. Students can then choose from 100 optional programmes.

To steer students through the electives the school has introduced a track concept for students who want to work in, say, banking or marketing. The most popular track is unlikely to cause raised eye-brows: consultancy. Indeed, 43

ated in 1996 went into consultancy. . Further, Urban has masterminded a joint degree between the Sloan school and the MIT School of Engineering which will usa the Internet to deliver course material to participants in the workplace. The course is intended for the sort of student who would "build a 747 or a global telecommunications system," as Urban puts it.
The school has already pio-

per cent of the class which gradu- neered the use of the Internet for

an executive courses this autumn. Tha course on negotiation was open to alumni from the school, a first step, Urban believes, in the move towards lifelong learning.

Moreover, it is not just the MBA programme to which Urban has turned his attention. A mildmannered man and an accomplished amateur sculptor, he has been steering the Sloan school through a period of rapid cost-cut-ting and change.

Urban's mission on taking over

the job, he says, was to mould Sloan into "the pre-eminent business school of these times", and to do so within the financial constraints of the day.

Increasing the size of the MBA programme to 300 students - still small by US standards - has given Urban the funds to expand else-where. He managed this with a minimal increase in staff by pushing through a productivity strategy based on a points system to equalise the teaching load between faculty members. Tha result was a 25 per cent productivity increase. Communication with his staff

has gone well, but Urban believes the outside world still does not get the full picture. In particular, the "MIT shadow effect" colours employers' views of the calibre of a Sloan graduate. "The negative effect is that people think we're turning out a bunch of nerds."

Driving away with the students

Ford is in offer seven cholarships for master of business administration (MBA) students in the UK. Cranfield, London and

Manchester Business Schools will each receive two of the £5,000 scholarships and Warwick will receive one. Ford will have some

input in selecting the student and the recipient's project will be undertaken at the company. But there is no obligation for the student to join Ford at the end of the course. Ford: UK, (0)1277 253000

Course in Paris in the new year

The Hec School of Management in Peris has developed an intensive 16-month fulltime MBA programme on which the students will be taught in both French and English. Students will study a two-semester core programme followed by optional courses selected from a list of 75 possible topics. In the final four months they will be involved in a fulltime

company project. The programme will run from January 1997. Hec: France, 1 39 67 73 79

Michael Thompson-Noel · Sport

Racing seeks its pound of horseflesh

borse-racing tale on the graspingness of those who manage racing in Britain. It starts with next weekend's running of Europe's top race then ventures into the muddied economics that stigmatise British racing.

Next Sunday, many rich raceborse owners will jet to Paris for Longchamp's Prix de l'Arc de Triomphe. 2 112-mile thriller which, every now and again, reveals or crowns - an outstanding equine champion

Last year's winner, the American-bred, Arab-owned English-trained Lammtarra, was a charismatic English Derby winner whose racetrack exploits and potential value as a stallion were such that his owners. the ruling Maktoum family of Dubai, were recently able to sell him to Japan for a reported \$30m (£19.2m).

England's best bope in next Sunday's Arc is probably Pentire, an eccentric colt but capable of great speed when he feels like it. If the bettiog is to be believed, Pentire is unlikely to beat the French-trained favourite, Helissio, who won bis tune-up race at Longchamp oo September 15 when described by his trainer. Elie

One of Helissio's most valuable characteristics is his biddability. "You can do anything with him [in a racing, is appealing to Kenrace] - lead, if you want, or come from behind. He goes on any ground," says Lellouche. English bookmakers rate Lellouche's colt as 3-1 pre-race favourite.

However, an Englishtrained runner could finish in the money, and place prize-money in the Arc is large. Even if no English runner is placed in the race. it is likely that Englishtrained raiders will win sackfuls of francs in other Longchamp races next Sun-

Indeed, English-trained runners are often flown to foreign race tracks - mainly in continental Europe, some times elsswhere, including the US - where they race for pots of prize-money. Then they fly bome again.

Occasionally, horses trained outside England plunder English races. But English prize-money, infamously low, is not an alluring target for foreign owners. As a result there is a significant gap, in England'e favour, between the amount of foreign prize-money won by English-trained borses and the English prize-money

Lellouche, as only 80 per won by foreign-trained prize-money. Nor does the cent fit.

Nor does the racing establishment often

Now for the fishy bit. The British Horseracing Board, which supervises UK neth Clarke, the chancellor, for a further reduction in offtrack betting duty in his Budget in November.

Clarke has already reduced betting tax this year. On March 1 it was cut by I percentage point to 6.75 per cent of turnover. But the board wants it cut again, to 5 per cent. It says that for too long, UK racing has been over-taxed and underfunded. From its suggested 1.75-

point cut in tax, it wants Clarke to allocate 0.75 of a percentage point of turnover to racing, to boost prizemoney and stimulate racing investment. The remainder would go to punters - reducing the deductions levied on their bets, helping to pro-mote betting turnover and boosting betting-shop profitability.

However, the big sums won by English-trained horses in foreign races are cleverly glossed over in the racing board's pre-Budget submission to the

Arguably, this devalues its case for spending part of the proposed cut in betting tax directly on propping up

Union

Limited

acknowledge why rich non-British owners, including oilrich Arab owners, base some or many of their horses in Britain in the first placs. The reason is this: they like Britain and they like British

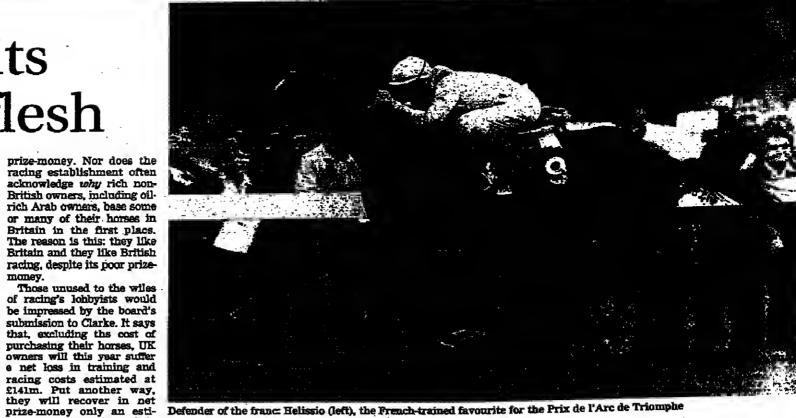

racing, despite its poor prize-Those unused to the wiles of racing's lohbyists would be impressed by the board's submission to Clarke. It says that, excluding the cost of purchasing their horses, UK owners will this year suffer e net loss in training and racing costs estimated at

training and racing costs.
British racing's prizemoney/cost ratio compares badly with ratios elsewhere. In 1994, says the board, the prize-to-cost ratio was 22 per cent in Britain, 47 per cent in the US, 49 per cent in France, 86 per cent in Japan and 143 per cent in Hong

mated 21 per cent of their

countries "Forty-one offered a better return on investment than Britain and only four [including Ireland]

The board acknowledges that racing has become fully

Defender of the franc: Helissio (left), the Franch-trained favourite for the Prix de l'Arc de Triomphe

valuable races in the world are now run overseas. Modern transport ... makes it simple to take horses abroad for competition, and in the period 1991 to 1995, the number of British-trained horses who won or were placed in races abroad rose from 225 to

"Equally, the...pre-eminence of British racing, based on the historical status of its great races, depends on the participation of overseas-trained horses. Such international competition cannot be sustained in

prize-money . . . Between 1992 and 1995, the number of foreign-trained entries [in] British races fell from 1.362 to 1.055."

Unfortunately for the racing board, whose chairman is Lord Wakeham, there is a view in some racing circles that there is too much UK racing: too many tracks, races, horses. In relativa terms, the majority of racehorses are not high-flying speedsters but - hy genetics' law of averages - slow, fumhling creatures whose destiny, most often, is the internationalised. "The most the absence of attractive dog-meat factory. Why punt-

ers, without whose support racing would vanish, should have to subsidise so many galumphing thoroughbreds is a moot point

The reason why UK racing is underfunded compared to racing in other countries is that British off-track betting is mainly in the hands of commercial hookmaking combines, which drain large sums out of the sport. Scrap the bookies and the sport's finances would be trans-

Clarke need not despair. Whet he should do in November's Budget is slash the rate of off-track betting duty by 4.75 points to only 2 per cent of turnover. That would charm punters and boost betting turnover.

In due course, prize-nioney levels would benefit. But Clarke should stipulate that the extra prize-money be allocated only to the mest important races - pleasing owners of the fleetest horses. not the dullest-footed.

Meanwhile, Clarke could do worse than bet boldly on the biddeble Helissio next Sunday. In trackspeak, Helissio looks bome and

bere is a river running through the heart of London, and it has been diverted into the sacred halls of the Royal Academy. In one of the most strikingly designed exhibitions for many years, the RA is showing 21 models of inhabited bridges spanning an artificial river. "Living Bridges" is the title of the display, which aims to convince the world that bridges can be more than mere constructions taking streams of stinking traffic across

polluted urban waterways. The exhibition was designed by one of Britain's best architects, Nigel Coates, now professor of architecture at London's Royal College of Art. Coates was given visual excitement.

Colin Amery • Architecture

Model example for London bridges

the challenge of presenting the history of the urban bridge while using the exhibition to advance ideas for spectacular new bridges for London.

It is unusual to find an exhibition that focuses on one huilding type, and there was a risk the show would be dull. But Coates has grasped the difficult nettle of the architectural exhibition and designed one that is thrilling to visit and effective in conveying

The models are all to the same scale and are beautifully made and displayed. We start with old London Bridge, built in the 11th century and until 1739 the only bridge across the London part of the Thames, It had houses, a chapel, an inn and the famous gateway where traitors' heads were

The present Financial Times design competition for a new foothridge across the Thames from Bankside, near Southwark

38 DOVER STREET, LONDON WIX SRB

Bridge, to Saint Paul's stresses in its brief the importance of the magnificent views to be had from the centre of the river. It also emphasises the need for silence and freedom from all wheeled

The competition is now under way, and the judges are about to start examining the 220 entries; a record number for any international competition. The shortlist will soon be known, so watch this space.

Views of the city of Florence were not the point of the Ponte Vecchio. It was trade that mattered, and the Medici dukes insisted on high-quality goldsmiths and silversmiths occupying the shops on the bridge. The Ponte Vecchio was the first shopping arcade, and although built in 1345 still stands and trades.

Two Parisian bridges follow on from Florence in the RA's show, one of them being the unexecuted project by Jaques Androuet

Henry III, who in 1578 designed a magnificent circular urban space that completely ignored the

The three historical English examples are all classical. In fact, it is wonderful to see the magnificent model of the proposal by Sir John Soane for what he called The Triumphal Bridge - until-now only realised in drawings. The grand model of his scheme is a revelation of splendour and is and a 400-bedroom hotel.

the bridge that should be built to link Somerset House in central London to the South Bank, to mark the millennium.
The model of Sir Edwin Lut-

yens' scheme for an art-gallery bridge across the River Liffey in Dublin shows another proposal that had previously only existed in drawings - an intelligent idea that would have been workable.

However, the proposal for the Pearl Bridge in Dubai City by Mario Bellini is going to be built, and will give the city the landmark it conspicuously lacks. Bellini's bridge has a great internal stair and offers an auditorium for 2,500, floorspace for the United Arab Emirates stock exchange

Video & Data Conferencing

The New Competitive Edge for Business

Video and data conferencing will change the way we work forever An FT Business Seminar to be held at the London Hilton on Park Lane, 21 October 1996

Videoconferencing is a technology which has come of age, enabling face-to-face communications between teams and individuals, regardless of distance. Through a series of case studies and interactive demonstrations, you will learn how leading organisations have used this cost-effective tool to improve productivity and profitability, achieving a real

Business benefits include: og and a range of flexible

Strategy for block release

The Net is restoring community spirit to a US housing estate, writes Victoria Griffith

resident of a government housing project in the down-and-out city of Newark, New Jersey, laughs about the time she logged on to the computer at 3am to find her neighbour Delphim Harden on the same programme. "I typed in "What are you doing up et this hour?' and she answered What are YOU doing up et this hour?," says Johnson. For Johnson, going online has given her a keen sense of togetherness with neighhours she once largely ignored. "I used to keep pretty much to myself," she says, "I was afraid of talking to other people in the projects. I never knew what kind of people they might turn out to be. Now, I have lots of friends."

Johnson is part of e US federal government programme celled Making Healthy Music, which aims to improve people's lives by plugging them into cyberspace. She is continuing to receive government assistance while bringing up two

orphaned grandchildren. Her neighbours say that since Johnson has gone online, she has become e pillar of the community.

The programme provides an insight into how things would be if the poorest in acciety were online. That day is not far off, many analysts believe, "Pretty much everyone in America has a telephone and e TV." says Ted Julian, an analyst et International Data Corporation, e research company. "Some day, I suppose everyone will have e computer and an Internet connection."

Under the Music programme, developed almost two years ago by Boston Shaw, participants are given e computer, software and training in exchange for promising to try to improve communication with their neighbours. They are then hooked into an intranet, a programme that links them to other users in the neighbourhood. Some 150 people now take part, using 34 computers scattered through homes. schools and

of the experiment have been a success. One goal was to encourage participants to start up small businesses. None has got off the ground.

Another Music initiative gave money to children to enable them to sell ice-cream and other treats online during the summer. "We didn't see much raturn," says Pamela Morgan, who administers Music for Newark. "We got the feeling that they ete most of the profits."

et the programme has created a community spirit many say was lacking computer consultant Alan before. Online hulletin boards list a host of forthcoming activities, including parades, festivals and benefits for neighbourhood causes. "Chat rooms" encourage users to talk about issues such as Aids and gang warfare and to exchange ideas about combatting such things.

The key to the initiative's success, say organisers, is that it is used to encourage.

churches. But not all aspects rather than escape from, face-to-face encounters. While participants exchange messages online, the true interaction takes place when they run into each other in neighbourhood and organise outings and get-to-gethers. "We don't want peo-

ple to sit at their computers

all day, says Morgan. One of the greetest unknowns in the experiment was how people with no previous technological experience would react to life in cyberspace. The results have heen positive. "I've never seen an easier group to train, because they're so enthusiastic," says Tiffany Cunningham, who runs training sessions for the group.

Morgan says she worried that the written format of the programme would daunt the Newark users, many of whom are almost illiterate. Yet while their messages are peppered with spelling and grammatical errors, participants have embraced the medium, and have even used it to improve their writing skills. "I used to have e hard

time reading and writing." says Harden. "But I've got much better." Shaw believes poor areas

have a greater need for online communication than wealthy communities. "Not only are people afraid to talk to each other face-to-face in these neighbourhoods, they also have e tougher time get-ting together," he says. "They don't have big bouses to hold meetings in, like people in wealthy suburbs. They also work very different hours, on night shifts and weekends."

Music has had its share of problems. It can be difficult to get people to commit themselves to training, and participants often drop out after a few months. One gave up after her computer was stolan, believing the expensive equipment was a provocation to thieves

For people like Barbara Johnson, though, the experience has been upbeat. "This has really changed my life," she says. "I walk around the projects and I know a lot of people. I really feel like I am living in a community now."

Paul Taylor on the problem of illegal material

Porn caught in Net

Proposals put forward last addressing the issues."
week by Internet service providers in Britain to tackle the problem of illegal material - particularly child pornography - on the Net were trumpeted by the British government es "ground breaking" and, "an opportunity for the UK to take a world lead."

The proposals, dubbed R3/ Safety Net, include setting up an industry-run complaints hotline, establishing monitoring and investiga tion procedures and adopting e self-regulatory code. They have the backing of all the largest UK Internet service providers, the government and the police and come amid rising public con-cern about Internet pornography.
In reality, however, many

believe that the voluntary proposals, which aim to curb illegal rather than simply offensive material, may prove as controversial and ineffective as other interna-tional attempts to regulate

Even Ian Taylor, Britain's science and technology minister, admitted that "the Internet is so vast it is impossible to remove all illegal material. These proposals will only go some way to

The R3/Safety Net proposals - R3 stands for Rating. Reporting and Responsibility - combine the ideas of Peter Daws, Internet entrepreneur and founder of the Safety Net Foundation, and a newsgroup rating scheme developed by Demon Internet, the UK's largest independent

Internet service provider. Individual newsgroups will be rated to indicate whether they normally contain illegal materiel and what sort of illegality is involved. The Foundation will establish a telephone hotline which will allow the public to report the presence of child pornography or other illegal material in a specific newsgroup.

As for offensive (but legal) material, proponents of the scheme, which include the Internet Services Providers'
Association and the London internet Exchange, will also support rating schemes which enable it to be filtered out using commercially available software.

Each hotline complaint will be investigated by the foundation and when illegal material is identified, details will be passed to Internet service providers. Within the UK, if the authors of the

material can be traced they will be asked to remove it.

Failing co-operation, the foundation will ask service providers to block the author's account and pass details to the police. When material originates from outside the UK, the authorities will liaise with the relevant overseas police force.

Despite the protests of such libertarian organisa-tions as the Campaign against Censorship of the Internet, proponents of the scheme insist it is not intended to curtail free

This has not stopped some ohservers from auggesting that the initiative is little more than an attempt to head off the threat of legislation. Cynics also note that the proposals appear to have been rushed through just in time for the UK party conference season.

Net experts, however, acknowledge that auch ini-tiatives will probably make it less likely that the casual Internet user will stumble on illegal pornography, but they also believe that, given the nature of the Internet, determined individuals will still find methods of circumventing these and almost any other restrictions.

 Charity site OneWorld Online has put in place what it claims is the UK'e first secure system designed to handle online credit card donations to charity. SAFE (Secure Antomated Financial Exchange) will be evailable to any charity as part of its fundraising efforts and has been tested with the help of children's charity Unicef (www.one-

The reason that a Mid-afternoon drowsiness is familiar to everyone too. howl of ice-cream before retiring can defaat hnt that has not stopped jet lag, he says, is that it researchers from setting out stimulates the hody's to prove that it exists and tryptoproduction of that it impairs our effi-

researchers in rural Texas studied "single-vehicle road accidents" - in other words. drivers who managed to have accidents even when sight. The number of accidents was lowest at 10am, rose to a peak at sleepy 3pm and then declined to a low point at 7pm, when drivers

are far more alert. Thesa sleepy periods explain why people flying across the Atlantic find it easy to drop off on the night of arrival even when their body clocks are still working to their home time.

A traveller from London who goes to bed at 9pm or 10pm in Seattle, for example, should find it easy to drop off because it is 5am or 6am in the UK. For a traveller making the journey in the opposite direction, going to sleep at 11pm London time coincides with the drowsy mid-afternoon period at home in Seattle.

But the 24-hour pattern

also explains why these two travellers, having had little difficulty falling asleep, will often be wide awake a few hours later. The two drowsy periods are followed by surges of adrenalin. After two hours sleep for the traveller from London, it is 7am. or sam back home - time to get up. To the traveller from

one is usually alert.

The trick is to try to rather than east; westward travellers recover from jet lag more quickly. Scientists from the US last year published a study of the effect of clocks naturally work to a

Seattla, 2am in London is air travel on the perfor-6pm at home, a time when mance of major league basehall teams. Their study found that teams from the extend this short period of eastern US flying to play in sleep. It is usually easier to the west did better than eastern US flying to play in do so if you have flown west . teams flying in the opposite direction.

Graeber says the reason it is easier to adjust when flying west is that our body

25-hour cycle rather than a 24-hour one. There are sufficient cues during our days at home to tell us to shorten tha cycle slightly to 24 hours. When we travel westwards, however, our bodies welcome the opportunity to lengthen the cycle.

But while it takes fewer days to recover when flying

who stay away for only two or three days are unlikely in notice the difference. Those first few days are miserable whichever direction you

travel One of Graeber's tips is to take advantage of how tired you are from your journey. Do not go to sleep when you arriva. If you do have to nap after flying east and arriving at your destination in the morning, set an alarm for two hours later, get up.

shower and go for a walk. Ensuring you are tired means you are likely to sleep that night. This explains why many travellers sleep better on the first night of the trip than on the second, when they have had time to recover from the journey.

But there are no easy answers to dealing with the problem of waking, in the middle of the night, after those few hours of sleep. Graeber suggests taking a light sleeping pill. Some travellers use melatooin, the hormone that promotes sleep, in the same way. Instead of taking a melatonin tablet before going to bed, they take one when they wake during the

night. The efficacy of melatonin is still unproven, howevar, Research on Air New Zealand crews suggested that while melatonin might be effective when used as a sleeping pill, it might actu-ally slow the body's adaptation to a new time zone. And nobody yet knows what the long-term effects of taking melatonin regularly might be. Ice-cream might be fatwest, the many travellers, tening, but it is safe,

Eat, travel, and be healthy

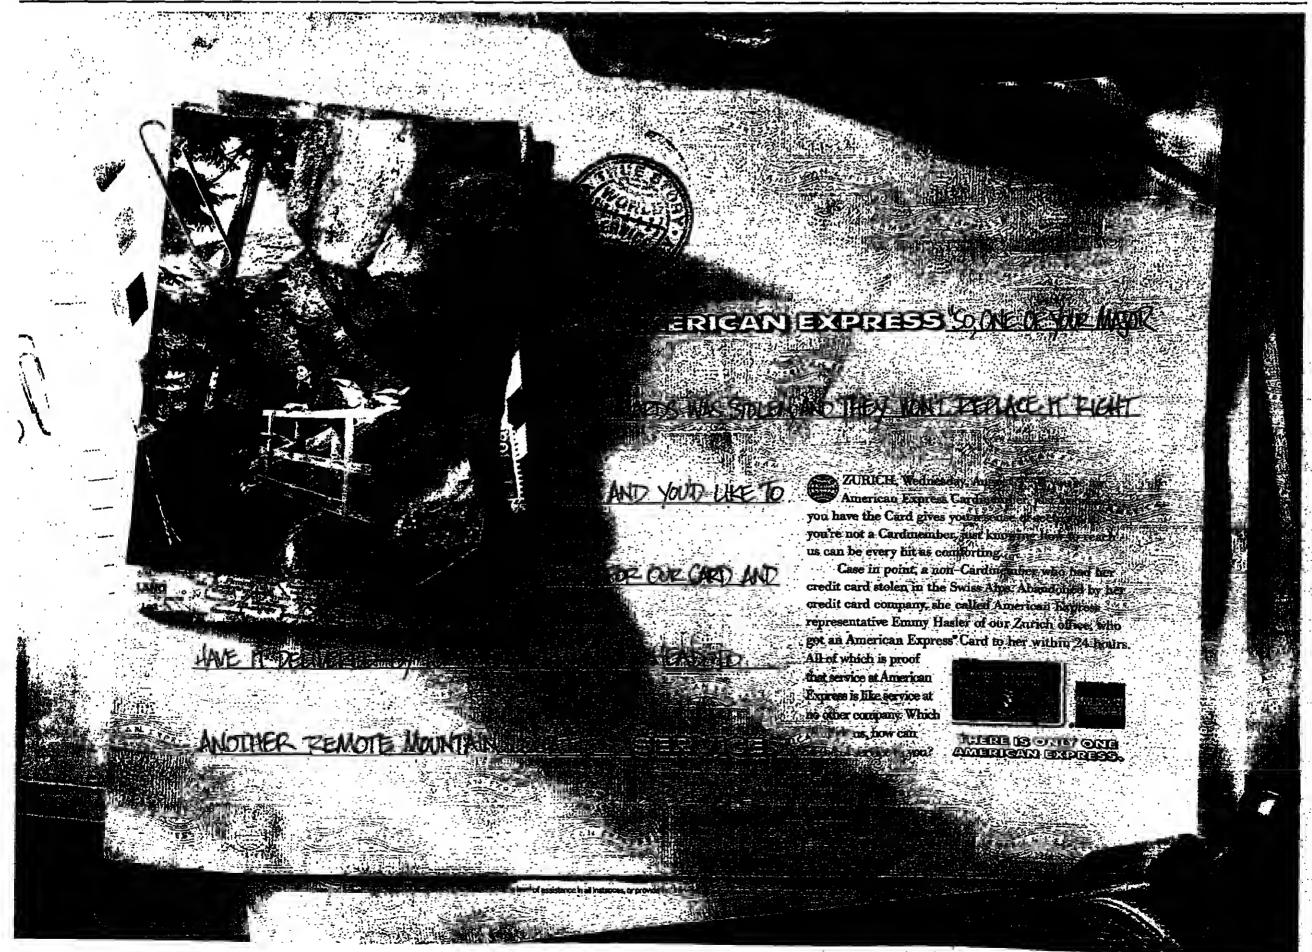

usiness travellers should take the same care with their diets as Olympic athletes, according to Dr James Scala, menu consultant to the Hyott hotel chain and a former adviser on nutrition to the US Olympic ski

team. If runners eat food with a high fat content, they slow down, he says. In the same way, the effect of fatty foods on travelling executives may be decreased mental capacity, mood swings and a general lack of stamina

The hotei chain started working on the problem some time ago at its 103 properties in the US, Canada and the Caribbean with what it calls culsine naturelle - which are typically low-fat,

high-protein disbes. The hotel chain says healthier eating is catching on rapidly among clients, and now represents almost one-third of its food sales.

Unfortunately it stretched across two local authorities. Tynedale and Eden. The former is likely to approve lt with enthusiasm, hut the councillors of Eden took described the work as an underground lavatory. At the moment the project is in limbo and the lottery money

> This is the exception. The north generally is delighted its art. Its main concern is to maintain the momentum into the future. This will come if the Baltic

quickly became the city's pleted, providing at least 30 permanent jobs and many more part time, with spinoffs into the surrounding

> he energy behind tha Visual Arts programme has parmeated the whols region. Two of the most acclaimed art exhibitions of the year have nothing to do with the project - the Lucian Freud exhibition at Abbot Hall in Kendal, which attracted 25,000 people, the museum's usual total for the year, and the first in-depth investiga-tion into the life and work of Benjamin Robert Haydon, the early 19th-century artist whosa genius was only matched hy his ability to quarrel with everyone, from patrons to friends. This is currently on show at Dove Cottage. Wordsworth's homa, and powerfully conveys the intellectual vigour of the era as well as giving e much needed displey to some of Haydon's most important works.

By going for the adventurous, Visual Arts has garnered a great deal of publicity much of it specious. The screens that surround Bill Viola's cathedral video were believe e monumental steel suggested by the police as a precaution: there has not been an actual protest et the naked image. The most intel-lectually dubious project – Goldsworthy's sheepfolds, by a literal handful of art lovers in a year - bas aroused little criticism, perhaps because it is seen as

> The combination of thought-provoking exhibits and scandal has succeeded in putting the north on the art groupies' map. Visits to the region's art galleries are up hy between 40 and 80 per cent this year, and bed occupancy has jumped by 15 per cent. These are the kind of economic facts that speak louder in the north than any outsized product from the fevered imagination of a conceptual artist.

t the Young Vic we A have Blood Wedding, the first play in Federico Garcia Lorca's great Andalucian trilogy. Both of the others, Yerma and The House of Bernarda Alba, have been seen quite recently in London, in distinguished stagings, but not Blood Wedding. Partly, perhaps, because as a modern classic it turns up so regusity productions; partly also because its poetry - at once hly hard to make work in English.

Most of all, though, because it translates so well into ballet, or flamenco dance: in that form Blood Wedding is familiar to audiences around the world. Music and danca were always meant to be part of into an opera but not, sadly, by Lorca's close friend Man-

Tim Supple's staging at the Young Vic goes in more for stylised movement than dance, which is okay, but there is less song than there ought to be. When even the lullaby in the second scene was declaimed over a musical background, one began to wish that the bndget could have run to some real

Adrian Lee's music, per

formed liva by three players on a vast array of "worldmusic" instruments, is aptly theatrical hnt heedlessly eclectic. There are touches of Spanishry, but also bagpipes, chimes, a didgeridoo singing bowls and anything else he could lay hands on. Sometimes we might be in Star Wars rather than among Andalucian peasantry in a hard land. Since so much trouble has been taken with the costumes, which look plain and euthentic, it seems e pity not to have a score that matches them at least in

Suppla uses a new translation by Ted Hughes. It manages to be properly pithy, often colloquial, and yet nearly always - finds speakable equivalents for key poetic phrases. Inflation apologists

Fears that price stability would reduce economic efficiency and raise unemployment are exaggerated

level of national output. The Federal Reaerve's But if inflation were zero decision not to raise interest why would it be impossible rates last week was almost certainly influenced by the to cut money wages? The changing intellectual cliauthors turn mystical at mate in the US. Absurd this point, and appeal to non-economic conceptions though it may seem, people of fairness, "Most people," they say, "consider it unfair for a firm to cut wages, except in extreme circumstances. On the other hand,

are now worrying about the supposed harmful effects of stable prices. Such fears are no longer confined to the political left. most do not consider it Mr Jack Kemp, the Republiunfair if a firm fails to raise can vice-presidential candiwages in the face of high inflation". date - and darling of the conservative right - is just They try to support this as opposed to Fed tightenclaim by pointing to empiriing as Mr Robert Reich, the

labour secretary. affected institutions occupying the political and economic middle ground. Prof George Akerlof and colleagues at the Brookings Institution, a centrist Washington think-tank, recently published a paper urging the Fed to drop its formal goal of price stability.

Since Prof Akerlof is a leading theoretical economist (and the husband of Janet Yellen, e Fed governor), the paper deserves

in a dynamic economy. the authors argue, the fortones of companies constantly change. Moderate inflation "greases the economy's wheels" by allowing companies that are doing badly to lower their real wages without actually cutting wages in money terms. If the overall price level were stable, this often would not be possible. Given the reluctance of employers to reduce wages in cash terms, they would cut employment instead.

The Brookings economists estimate that, if the Fad were to succeed in pushing inflation to zero, the equilibrium jobless rate would rise by more than 2 percentage points to about 8 per cent, against slightly less than 6 per cent if the inflation

target were 3 per cept. Moreover, the higher jobless rata would translate into a permanently lower know that a 4 per cent wage increase when inflation is 6 per cent is a cut of 2 per cent in real terms. And they also know that a 2 per cent wage increase when inflation is 4 per cent is a cut of precisely the same magnitude; they do not regard it as worse simply because the

Yet why would workers suddenly lose this capacity for simple arithmetic if the price level were stabilised? Why would they regard a 2 per cent wage cut with zero inflation as more "unfair" than either of the above offers? It makes no sense

The example of the 1930s

is not as telling as it seems because policymakers then reinforced the aversion to wage cuts. Even Republicans such as President Herbert Hoover had very limited sympathy for free-market doctrines. Like other politicians of his day, he feared that wage cuts would reduce purchasing power and worsen the depression. After the stockmarket crash of 1929 he thus urged businessmen not to cut wages even in the face of price falls. Tha resulting increase in real wages pushed up the unemployment rate and greatly worsened the downturn.

Even if Prof Akerlof is

Alleged perils of zero inflation

Afternative stabilisation paths Unemployment rate (% of workforce)

wards" in spite of persis-

The argument is patently

tently high unemployment.

implausible. The great les-

son of recent decadas,

aurely, is that workers do

understand tha impact of

inflation on the purchasing

power of wages: in the jar-gon of economists, there is no such thing as "money

illusion". If this were not

the case, inflation would be

a painless way of cutting

real wages, and govern-

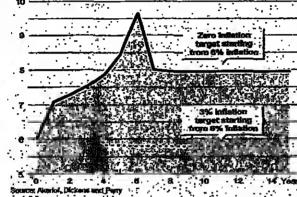

ments really could spend

their way into higher levels

of employment, just as

But, in practice, workers

Keynesians once assumed.

money wage cuts, there is no reason to regard this as a social "given". Nothing is fixed in social life. In a zero inflation world, people could learn to accept the need for occasional cuts in money wages, just as they now accept cuts in inflationadjusted wages. To assume this is impossible is to assume that people are permanently irrational poor, if not insulting,

assumption on which to

base any economic theory.

If the US had recently enjoyed a long period of sta-ble prices, and if this had been associated with high unemployment, tha concerns raised in the Brookings paper might be under-standabla. The truth, of course, is that inflation has been a chronic problem for most of the post-war era. Since 1950, tha US consumer price index has risan by more than 500 per cent. It has risen about 40 per cent since Mr Alan Greenspar becama Fed chairman in 1987 - despite his repeated evowals of the importance of stable prices.

Since the core rata of inflation has dipped below 3 per cent only in the last couple of years - a heartbeat in economic terms - it eems premature to worry about the dangers of zero inflation. The approach to stable prices, moreover, has been a positive rather than negative experience for business and workers alike. Corporate profits hava boomed and the jobless rate has dropped to nearly 5 per

With zero inflation, relative price signals would be clearer than they are today. The tax system would impose fewer distortions. Capitalism would function even more efficiently. And the jobless rate would tend to be lower, not higher. The pessimism of the new inflation apologists is quite

Leadership qualities should be defined to support value theory

current debate is whether it

From Lord Wallace of

Sir. It is fascinating to find professor (Alec Reed, etters, September 26) insisting at the same time that "the qualities required for effective commercial leadership are hard to define", that these qualities do not necessarily include either technical or linguistic expertise, but that the appropriate market rate for their salaries is, in contrast. relatively easy to define and calculate.

Market principles ought to apply to executive salaries as much as to other areas of economic life. Exceptional qualities evidently deserve The question at issue in the

is appropriate that the general run of senior executives should receive disproportionate increas salary year by year, while the general run of other employees are held back. Behind that lies the question of whether the contribution senior executives make to companies is so much greater than those of other key employees as to justify a widening gap, year by year, in the distribution of rewards. If it is indeed the case that

British executives are in such high international demand that maintaining their salary levels in line with general wage increases risks losing large numbers to other countries, then the case is made. Professor Reed and his colleagues should be able to provide the evidence to support this case. My uninformed impression is that the UK is a net importer of top

management, rather than a net exporter. That suggests that exceptional management qualities are in short supply in this country; but it does not suggest that so many of our domestic executives should command levels of remuneration comparable to those recruited from the international market.

William Wallace. House of Lords,

Astonishing change to civilised service

From Mrs Helga Drummond. Sir, I was astonished and dismayed by the changes to the Eurostar services reported in your Busine Travel section ("Farewell to the classiess society".

Sentember 23) On frequent trips between London and Paris I very quickly learned to appreciate what I felt was a degree of civilised service the airlines

can only dream of. I cannot think of anything more enjoyable after a strenuous working day in Paris than to lean back in my pre-allocated seat and enjoy a good quality meal served unhurriedly and in style, allowing time for pleasant conversation with a colleagua or another

If there really are

worksholics about who prefer a quick snack on a tray in order to work all the way to London, let them travel by air. They will get what they want and can then go on working at bome.

Singapore servers

From Mr Goh Liang Kwana. Sir. Your article "Electronic undesirables" in the Media Futures column (September 9) stated that the Singapore government spent an estimated \$5200,000 (£91,000) each on proxy servers to "check requests for access against a blacklist of sites containing objectionable material"

This is not true. The Singapore government didnot install any proxy server. The proxy servers were installed by commercially operated local Internet services to enhance their network efficiency and meet. the growing demand for Internet services. There are about 150,000 aubscribers out of 744,000 bouseholds in Singapore, and the number is growing rapidly.

Proxy servers enhance efficiency by reducing download times and speed up network access for users. They are used by network administrators all over the world, including the US and Europe.

Gob Liang Kwang, chief executive officer. Singapore Broadcasting Authority. World Trade Centre, 1 Maritime Square, #09-59 Singapore 099253

Euro question better left to market forces than politicians

From Mr Bryan Cassidu

Sir, Samuel Brittan sheds the light of long-overdue common sense on the "euro" debate ("The euro will surely come", September 26). Not once does he use the phrase "single currency" which causes so much heartburn to many Tory MPs and candidates

The concept of a "common currency" (the term "parallel" is too much economists' jargon) is a much more comfortable one. It gives business and

consumers the choice of whether to use the euro or their national currency for transactions - in other words, market forces. The euro will have to

operate alongside national currencies for some years after 1999 even in those countries which are part of the currency union. Euro notes, coins etc will not be available until after 2002. Sir Samuel quite rightly

reminds us that the US dollar is widely used in many parts of Central and South America side by side with national currencies because people there trust it more than they do their own. So is the D-Mark in many parts of the former Communist Bloc. Many people would prefer

to leave the matter to market forces rather than politicians. Bryan Cassidy,

European parliament. 97-113 Rue Belliard,

From Mr Thomas Hackett. Sir, To attempt correcting

Samuel Brittan is always a risky business, but surely, and ironically (given the subject of his September 26 Economic Viewpoint on the euro), it was Lord Palmerston rather than Bismarck who said of the Schleswig-Holstein question that only three men had known the answer. Of that trinity, one had died, the second had gone mad, while

8 rue des Sept-Fontaines, L-2534 Luxembourg

he himself had forgotten.

Robert Chote on efforts to cut 20 countries' debt burden

Relief brings its own pains

Cost of debt initiative

When Mr Kenneth Clarke, the UK chancellor, first proposed selling part of the international Monetary rund's \$40bn (£25.6bn) reserves to help finance debt attempt to help some of the world's poorest countries. Instead his initiative has

launched a relentless round of number-crunching, tortu-ous negotiations and intensive politicking over how it should be implemented and who should pay for it.

In two years a proposal which should cost less than the development of the Eurodisney theme park in Paris has put leading industrial countries at loggerheads and the reputations of interna-tional financial institutions

The initiative's objective is to help poor countries which adopt responsible economic policies to reduce their debts to levels at which export earnings, aid receipts and capital inflows are sufficient to service their borrowings comfortably. The IMF and World Bank estimate that under existing debt relief programmes, there are eight countries with unsustainable dabt burdens and at least another 12 which could easily fall into that category.

The earliest beneficiary would be Uganda, where poverty is pervasive in spite of impressiva economic reform. Debt repayments will absorb a third of its export earnings over tha next three years. Its \$184m debt repayment in 1996-97 will amount to more than \$9 a head - 10 times what the government will spend on basic healthcare. Oxfam International, the

lobby group, estimates that reducing Uganda'a debt service payments to the 20 per cent of export samings recommended by Mr Clarke would save the country \$80m. a year. This could finance Paris Club's share of the 50.000 primary school teachers with teaching materials, basic healthcare for 2m people, vaccination for 1m children and access to clean water and latrines for 1m.

The IMF and World Bank calculate that reducing debt finance tha bank's share in such countries to sustainable levels will cost between income. But controversy sur-

Source: Modd Back staff materials

cated by the range of their creditors, which include governments, commercial lend-marked for the individual states of their creditors, which include governments, commercial lend-marked for their creditors, which include governments. reconcila their conflicting interests has caused most of the mitiative's problems. The 20 poor countries iden-

tified by the bank and IMF had total external debts of \$97bn at the end of 1994, measured at the present value of future repayments. About 60 per cent was owed bilaterally to the governments of other countries (many of which are members of the Paris Club of industrial countries) and 14 per cent to private sector credi-tors. About \$21bn was owed: to multilateral institutions such as the World Bank and the IMF.

The Paris Club, under its "Naples terms", can offer 67 per cent relief on most bilattry before its first request for aid agency and development a rescheduling. The IMF and World Bank wanted this increased to 90 per cent, after which they would step in to reduce total debt to a sustainable level.

Under this proposal, the \$5.6bn cost would come to \$2.9bn, compared with \$700m for the World Bank, \$500m for the IMF and \$1.5bn for other creditors. Mr James World Bank, has promised to account of the largest possi-

ers and international organi-aationa. The need to IMF's gold reserves as "selling the family silver". However, he has since embraced It as a way to put the IMF's existing subsidised loan facility for poor countries the enhanced structural adjustment facility (Esaf) -

on a permanent footing. Germany remains opposed to gold sales, however, fearing it would create a bad precedent and that it might stir up support for sales of Bundesbank gold at home. An IMF board meeting two weeks ago kicked the issue into touch, agreeing to fund the debt initiative from reserves while postponing a decision on gold sales until nearer the time when Esaf needs tha money.

Gold sales have captured eral debt incurred by a counthe headlines, but many officials believe the greatest threat to the long-term success of the initiative comes from the Paris Club and Its powerful secretariat in the French finance ministry. Mr Christian Noyer, head of the secretariat, told the head of the IMF'a ministerial committee earlier this month for the promised relicf. that the Paris Club governments would increase the generosity of the Naples

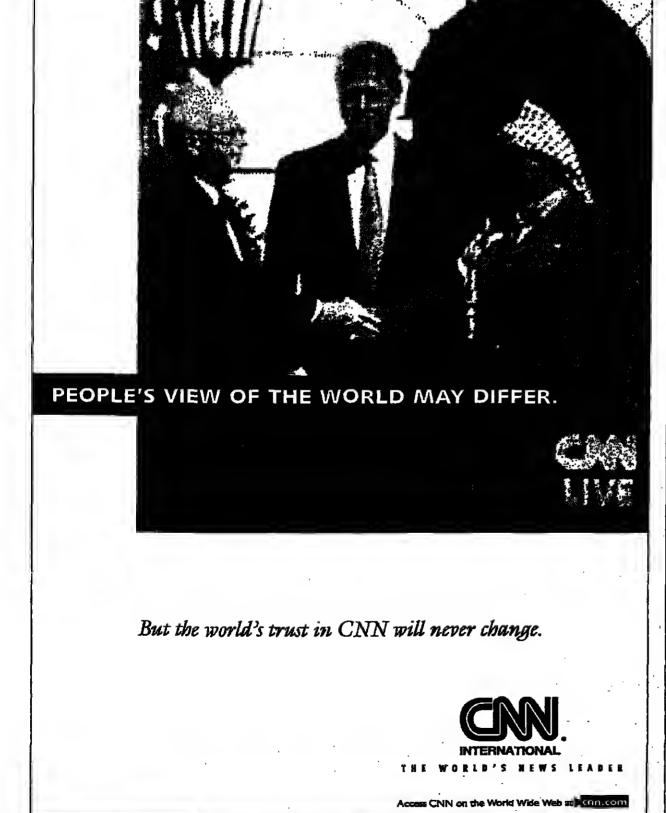

ble contributions of tha from its substantial net World Bank and the IMF". This reflects a desire to

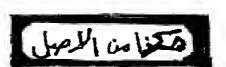

away from bilateral relief Mr Michel Camdessus, the and on to the multilateral

90 per cent debt relief was too much. At Saturday's meeting in Washington of finance ministers from the Group of Seven leading industrial countries, they agreed to push for up to 80 per cent, which would shift \$1.2bn of the costs on to the multilateral organisations. But, according to Mr Wolfensohn, this means that some countries may not achieve debt sustainability.

The Paris Club's detractors say its secretariat is opposed to the very notion of a comprehensive approach to debt relief, which would rob it of its power over supplicant borrowers. As Mr. Noyer said last week: "We are asking [the World Bank] to put its cheque on the table and not occupy itself with our work". At the IMF's "interim" committee yesterday, also in Washington, ministers gave the Paris Club a fresh nudge to play its part, but its willingness to co-operate will become clear only when the first countries establish their policy track records and apply The IMF's decision to pro-

ceed with the initiative while holding back on gold terms only "when they deem sales has allowed Mr Clarks Wolfensohn, president of the it appropriate, taking and the other finance ministers to hail a great achieve-ment. But if the initiative succumbs to power games in \$5.6bn and \$7.7bn. But rounds how to finance the shift more of the burden will be ordinary people in Uganda and the like who

Italy's budget

The prospect of being hanged concentrates the mind wonderfully. In this spirit, the Italian government has decided that it must make a bigger affort to pass the Maastricht test next year. This conversion is welcome. But Italy's plans may still

Military

Until last week, the left-ofcentre Olive Tree coalition had planned to achieve fiscal deficits of 4.5 per cent of gross domestic product next year and

3 per cent in 1998. It had also hoped to form a common front with Spain on the side of lenient treatment of any failure to meet restrictive definitions of the Maastricht Treaty's fiscal criteria. But Mr José Maria Aznar, Spain's prime minister has made it clear that Italy would obtain no such support. Whereupon the Italian government finally realised that it would have to make a bigger

Last July, the government had proposed to make a struc-tural fiscal adjustment of L32,500bn (£13.7bn or 1.8 per cent of GDP) in 1997. But because of the slowdown in the economy, this would already be insufficient to meet its old target. Thet now demands an adjustment of some L37,500bn, to which the government plans to add a one-off Maastricht tax, in order to raise an edditional L12,500hn. Yet even this may reduce the deficit to only about

growth is unexpectedly strong.

The government's hoped-for down the devious path of creative accounting. But it should not be allowed to do this.

With a ratio of gross debt to GDP of more than 120 per cent double the Maastricht reference number - and e history of fiscal profligacy and currency instability, Italy has much more to prove than France. It should required to show that it has its deficit under durable control. which would necessitate reform of pensions, health and public administration. The fact that the government has shied away from such changes is a bad while this provides a strong

case against any leniency, a further decline in interest rates could bring the fiscal deficit in line with Maastricht criteria without much further fiscal tightening. Redemption yields on 10-year bonds have already fallen from nearly 14 per cent in March 1995 to 9.2 per cent last week. If Italy were a credible candidate for Emu, they might come far closer to German levels, which should render Italy's public finances sustainable.

Its partners should insist that Italy achieve its planned programme for 1997 and agree the reforms needed to ensure durable spending controls. If this were done, the country might deserve the benefit of the doubt. Nonetheless, it should not be too surprised if the jury takes a

Caveat banker

The bankers of the world are watching this week's meetings of international financial institutions in Washington with one Mexican-style financial crisis, will the lenders get bailed out, or won't they? With luck, they

will not get a straight answer. It would be good to think that banks active in emerging markets might be concentrating on . avoiding the next Mexico, not wondering how they will ha helped out when it happens. for the banks would be to pre-The signs are that they bave become a bit more discriminating since the crisis. Yet Danks will always prefer to have their emerging market cake and eat it: high returns, coupled with International Finance, whose the security of a global slush members include leading comfund if things turn mouldy.

banking community has generally supported tha new "arrangements to borrow" worked out among the IMF's richest members, which will be given final approval this week. These will make a \$50bn emergency credit line available to support future Mexicos. The trouble is that banks would rather the borrowing countries did not have the same feeling of security. After all, how can you trust a government to stand by its commitments when there it knows there is an automatic safety net to support it if it

two ways to resolve the commdrum. The first is to price their loans with reference to the stansimple question. Come another dard country and currency risks, coupled with some estimate of the probability that a given country will be bailed out. One can be fairly sure, for example, that Mexico or Israel would get help in a crisis. But the same would not apply to Libya or Tanzania.

The second line of approach vent defaulting countries from having access to emergency out their problems with private borrowers. The FT Interview · José María Aznar

Still everything to play for

Spain's PM is betting his country will win a place in the first group of single-currency nations, he tells **David White** and **Tom Burns**

place in the first group of singleprobably none has as much at stake on the decision as Spain'e Mr José Maria Aznar.

Not only has qualification become the overwhelming determinant of Spain's economic policy - a fierce discipline in a country where unemployment is twice the European Union average but it is also the fulcrum of the political deal keeping Mr Azpar's minority centre-right government in power,

"We shall be there," he insists. Spain is still well ontside tha essential requirements on inflation and public finances, but Mr Aznar is determined it can meet them by the end of next year and join the euro in January 1999.

"I am ready to take whatever measures are necessary to succeed, because I am absolutely persuaded that Spain is staking its stability and prosperity in this bet," he says. "And in the second g politically for the most important membership there is. Also, I am very convinced that this has the backing of the majority of Spanish opinion."

Since May, when he moved into the Moncloa prime ministerial complex on the outskirts of Madrid, after e hard-won agreement with Catalan regionalists, Mr Aznar has settled into his new role. His manner has become more confident, less defensive, although still a contrast with the expansive, communicative style of Mr Felipe González, his Social-

In the columned salon of the Monclos palace, the white sofas where Mr González received his guests for more than 18 years have been re-upholstered in a blue brocade. Speaking fast and quietly. Mr Aznar barely moves

mong the European position except when he leans forward to re-light a large cigar. Occasionally, and epparently et the cost of some effort, his features rearrange themselves into e

crinkly smile. It has been a big week for the government; an outline agreement with trade unions on the state pension system, a new arrangement on finance for the country's self-governing regions, a deal with regionalist parties to secure backing for a 1997 budget which Mr Aznar describes as very tough".

As a proportion of the nation's output, the overall deficit has to be cut by almost a third to reach the 3 per cent target set in the Maastricht treaty. In international financial cir-

cles, many are deeply sceptical about Spain's prospects of meeting the criteria. But an increasing number of economists in Madrid are ready to believe it might actually make it. The question only next year's events will for it to become part of "a answer is whether this 43-year zone of stability, with low interold former tax inspector is the est rates, a stable currency and

In his rapid ascent to take over the leadership of the conservative Popular party and bring it to power for the first time, Mr Aznar has shown himself to be both methodical and stubborn. He leaves no doubt as to his earnestness about the Maastricht goals.

That, he says, was the message he gave e fortnight ago to Mr Romani Prodi, the Italian prime minister, when they met in Valencia. Mr Aznar made it clear he would have no truck with any joint southern European approach to try to bend the criteria or the timetable.

"He wanted Spain and Italy to walk together holding hands towards Maastricht," he says of Mr Prodi. "I'm not interested in helding hands. I told him we'd be there, right at the start."

political nature of the decision (on who joins), but is absolutely determined about fulfilment of the conditions," be adds. Spain's calculation is that if it can roughly match France's perfor-

mance on the criteria, it cannot easily be excluded. "The closer I am to France, the happier I will be," Mr Aznar edmits.Would it be a disaster if Spain's entry was held back, if Germany proved reluctant to risk admitting "peripheral" countries et the outset? "No, it would not be a disaster," says Mr Aznar.
"The thing is that I..." - he breaks his sentence with a ner-

vous laugh - "... that it's better to get there."

onetary union has "more has advantages than drawbacks" for Spain, he says. It were "good aims, with or without Maastricht".

He speaks proudly of the "iron belt" of controls included in the latest budget and the "economic hygiene" that would come from making spendthrift regional governments more answerable to taxpayers. Here is the tax inspector in Mr Aznar speaking. The financial deal for the regions, which the government had to draw up to satisfy the Catalans' main demand, would mean more e re-jigging of the way funds were paid than extra costs, and in any event would cost no more than Pta200bn (£1bn) over

five years. 'Spain's budget mentality and budget credibility will change very significantly," he says. In the planned wage freeze in the

"Spain is very conscious of the public sector, Mr Aznar bas managed to avoid any serious confrontations in his first months of government. But be has a firm belief that he can change the country's high-spending culture.

"I think one of the elements in the modernisation of Spain is changing the mentality about spending," he says, and edds sol-emnly. "I have taken on this responsibility and this engage-

He has kept a close eye on preparation of the budget, which he describes as "extremely rigorous from the expenditure point of view". There is, he points out, a wider picture to the cuts (which includa a reduction of more than 7 per cent in public investment). Apart from a programme of pri-vatisations going through next year, there is to be "a grand overhaul of Spain's public sector".

This includes streamlining the administration. "It is the first time in Spain's history that the civil service, rather than getting larger, has got smaller."

But what of the high growth expectations that the Popular Party saw as carrying the country through its period of reforms? Mr Aznar puts e brave face on it. Yes, year-on-year growth in inflation-adjusted GDP had sagged to 1.9 per cent in the second quarter, but it was "perfectly possible" to recover to a 2.3 per cent rate at the end of the year and 3 per cent in 1997.

He predicts this year will also see a fall of 200,000 in the number of jobless. According to the latest quarterly survey this stands at 3.5m, or 22 per cent of the evailable workforce.

Inflation, which the government expected would be below 3.5 per cent at the end of the year, was et "historic lows", and the government could help bring it down further through its powepite of union protests against ers over electricity, gas and telephone charges.

Did his policies mirror the hard-line "free-market" or softer "Christian Democrat" current in his party? There is only one label Mr Aznar eccepts and thet is "centrist-reformist".

"I believe in policies that are possible. A policy that a country will not accept is condemned to failure." Mr Aznar's "relatively optimistic" vision includes a dose of relief that his arrival has brought no clashes such as last year's social unrest in France over welfare reforms. He jokes ebout scaremongers' visions of "the armoured division rolling down the streets of Barcelona".

Mr Aznar is above all a cautious man, looking for consensus. nudging rather than rolling back the frontiers of the state. In the public sector, he says, "there are areas in which prudence calls for a slow approach."

The liberalisation measure generally considered most vital for Spain's chances of competing within a single-currency bloc easing its labour rules - is being discussed between unions and piovers. He sav for the outcome, but hints that if there is no agreement by early next year the government is pre-pared to lay down its own plan. Steps have already been taken

to liberalise telecommunications and other sectors, constraints on savings have been eased and pri-vatisation plans have been prepared. "I think this list is pretty good for four months," he says. lt is a dogged, dey-by-day approach. Mr Aznar compares it with the competitive examinations he sat 20 years ago for Spain's elite corps of "inspectors of finance". He worked 10 hours a day, learning answers by heart on about 250 topics. He still sees himself as an examinee. "At the end of the day you're competing against yourself, and you get on

with your own job."

Smoke damage

The announcement last week that 40 lung cancer victims are to sue two of the tobacco giants is e test case in more than one

It will test in the British courts the ebility of the tobacco companies to withstand the huge compensation claims which they have been facing in the US; and it provides the first big test of the government's new "no win, no fee" approach

Unlike the contingency fees system in the US, the UK system does not allow lawyers to charge more than their normal fees, whatever damages are awarded. Even so, critics argued the change would provide a "bonanza for lawyers" and the risk that frivolous cases would be brought. Supporters maintained that given the repeated reductions in eligibility for legal aid, it was a way to make jus-tice more broadly available.

The scheme has been running for little more than a year. But the limited experience so far suggests that wider access to the law is indeed being achieved. More than 10,000 people pursuing personal injury cases have taken advantage of the scheme so far, according to the Law Society's estimates.

Few of these cases have come to fruition: only a handful have been settled before reaching court. They form, nonetheless, the first core of cases on which insolvency and human rights.

the critics' view of the scheme will be judged when it is reviewed in a couple of years'

Last week's decision, how-ever, takes "no win, no fee" into much broader territory. Not only is it the first class action under the new arrangements, it is the first large case in which "no win, no fee" is plainly substituting for legal aid.

Those suing are some of the 200 peopla who, after being granted legal aid to develop their case, found it was withdrawn in July. The Legal Aid Board then took the view that the chances of success were less

than 50 per cent. Whatever the outcome, however, the action is plainly not frivolous. Too much is at stake

for both sides. The case will be important for shareholderes. Antagonism to smoking is now so widespread that e legal judgment would be helpful to suggest whether the industry may be facing large liabilities for the damage its products are said to have done. This case may provide an

important pointer - as well as demonstrating how well conditional fees are operating. It will provide a key piece of evidence on which to judge whether the Lord Chancellor is right in his longer term desire to extend ano win, no fee" into other areas of the law beyond personal injury,

Lebed urges Yeltsin to hand over reins of power

By Chrystia Freeland

Mr Alexander Lebed, the Russian security chief, says president Boris Yeltsin should officially hand over his executive powers until he has recovered from his planned heart

bypass operation.

Mr Lebed's appeal contradicts the assertions of other senior government officials that Mr Yeltsin is still able to rule the country, and suggests that the struggle for power is heating up inside the Kremlin.

Yesterday it emerged that Mr Yeltsin, who is scheduled to undergo heart surgery within six to eight weeks, had ignored medical advice during tha summer election campalen, thereby aggravating his heart problem.

Dr Renat Akchurin, who will operate on the president, told Russian television yesterday that Mr Yeltsin had defied medical advice and "treated himself ruthlessly" during the campaign. In August, doctors had doubted whether he was claimed he had been handed

Mercedes workers strike over cuts in sick pay

By Wolfgang Münchau in Frankfurt

The battle by German trade unions against cuts in legal sick pay entitlements intensi fied over the weekend when 20,000 Mercedes-Benz workers called their first full-day strike. Previously they had limited themselves to brief

The metalworkers stopped work in car plants around Stuttgart and in Bremen as opposition politicians warned of the demolition of the wel-fare state. Trade unionists are threatening "a hot autumn".

A law taking effect tomor row will cut statutory sick pay from 100 per cent of wages to 80 per cent. Unions and employers, however, disagree about whether the law must override existing employment

Today's edition of Der Spiegel, the news magazine, says legal experts in chancellor Helmut Kohl's office believe that employers may be acting unlawfully if they cancel existing contracts on the basis

of the new law.

IG Metall, the engineering workers union, has targeted Daimler-Benz, the parent group of Mercedes, after it led wave of large industrial groups declaring unilateral cuts in sick pay.

Mercedes may also become a legal test case, because most Mercedes-Benz car workers have work contracts giving guarantees for full sick pay from the first day of illness. IG Metall has called out its members for a full day of pro-tests on October 24.

Many employers regard the old 100 per cent sick pay deals as a symbol of Germany's declining competitiveness. But Ms Renate Schmidt, the leader of the Bavarian Social Democrats, said the new law

tions of our democracy". For the trade unions, sick pay is a crucial battleground. IG Metall secured many of the current arrangements after a 16-week strike in 1957, the most bitterly fought industrial

dispute in post-war Germany. One opinion pell says 63 per have refused to follow Daim ler's lead. They include Volkswagen, the car maker, and

Precessag, the metals group.
The government coalition is also split. Mr Kohl has called on employers not to break existing contracts. But the Free Democrats, the junior coalition partner, welcomed the decision by Daimler and other companies to implement the new law without delay. At Mercedes-Benz, workers

are specifically targeting over-

time, especially Saturday

work, for industrial action.

The obvious consequence will be an explosion in the cost of state sions. Since this would require implausible tax increases, many

THE LEX COLUMN

Small byte at Olivetti

Olivetti's institutional shareholders have won a famous victory. The De Benedetti clan. which controls the struggling Italian electronics company's board, is apparently willing to allow them to appoint a non-executive director. If the company's plight was not so dire, the notion that they could be bought off with so little would be amusing. Do investors really think that a single non-executive will safeguard their interests when all the top executive posts are packed with Mr Carlo De Benedetti's associ-

Now is not the time for quarter measures. Not only is Mr De Benedetti's credibility damaged follow-ing a string of broken promises; big strategic questions are looming and a former director has cast doubt on the accuracy of Olivetti's reported results. Rather than accepting a single non-executive, investors should insist on sufficient directors to wrest control from Mr De Benedetti They would then be able to discover Olivetti's full financial position and decide whether the current executives should stay in place. If Mr De Benedetti refuses, foreign share-holders could force his hand - they

do own 70 per cent of the company. But the institutions, as too often is the case, do not seem to have the stomach for a fight. Some say Olivetti's difficulties are so great that its banks could lose patience by the time the board was revamped. Maybe, but more likely they are simply afraid of the spotlight. If they shirk the opportunity to take control and Olivetti's situation detariorates, shareholders will have only themselves to blame.

European pensions

As everyone knows, the European pensions problem is colossal. So are its investment implications. By one reckoning, worried Europeans are likely to generate between \$150bm and \$200bn a year in additional savings over the next decade or two. Where is all this capital going

Start with the demographics. Longer lifespans and a falling birth rate point to a frightening drop in multiples of workers to pensioners. In Italy, this figure has fallen from six times in 1950 to four times now, if nothing changes, it will be below 1.5 times by 2040.

but to cut future pension benefits and get individuals to save more

This picture is probably too stark. For a start, part of governments' responses will be to raise retire-ment ages – in which case people may work longer but not save more. Moreover, big cuts in pension benefits may be politically undelivera-ble. Take Britain: it is luckier than most in its demographics and its reformed state pension now looks affordable in the long run. Yet even in Britain it remains to be seen whether governments can hold their nerve as reforms start to bite. The most likely outcome is not black and white. Governments do have some demographics in their favour: strong growth in the num-ber of middle-aged high savers. This alone should ensure that private savings grow. But so will the cost of state pensions. And since governments are har ily likely to find the

full cost in 'er taxes, they will doubtless re. to borrowing. This suggests waving an early goodbye to the fiscal good intentions of European monetary union. It also suggests that a good chunk of the growth in private savings will be eaten up by bonds, not equities. Where does this leave fond hopes that private savings will flood into the underactive stock exchanges of continental Europe? Even to the extent that the money is not gob-

bled up by governments, this can-not be taken for granted. The funds will not be invested in European stocks unless these are likely to produce decent returns. And Europe will be up against a formidable appetite for capital in Asia. Moreover, Europe's ageing population will do nothing for its growth prospects. As it is, the puny size of Continental stock markets probably likely to be slow.

uses for capital than a shortage of

This may not be the whole story Even if a flood of savings does not flow mechanically into Continental stock markets, local companies will still have a strong incentive to compete for it. The same logic applies to fund managers and even to stock markets. To win access to this new capital, companies will sursiy mand to demonstrate more emphasis on shareholder value: fund managers a clear focus on returns; and stock markets transparent and fair rules. Who knows? If such a virtuous circle gets going, maybe Europe's pension woes could work wonders for its equities after all.

Easdag

Wouldn't it be great if Europe had a string of entrepreneurial high-tech successes like Microsoft and Intel? Both are listed on the US Nasdaq exchange, a forum for trading the shares of "growing" compa-nies. Why not set up a similar exchange in Europe and repeat the

The logic behind setting up Kasdag, which opens for business today, is not that simplistic. But some of the rhetoric is. The reality is likely to be more pedestrian. While the aspiration of closing Europe's technology deficit with the US is noble, merely setting up a specialised stock exchange is not going to do the trick. A much bigger barrier is the cluster effect: although Europe produces a large number of boffins, it lacks the cre-ative buzz of a Silicon Valley. Not suprisingly, many of Europe's best are drawn there. Another barrier is the conserva-

tism of European investors. Many shun equities completely: those who do not tend to be wary of hightech stocks. Mr Peter Young, late of Deutsche Morgan Grenfell, was an exception. Again, it is hardly sur-prising that more than 80 European companies - such as Business Objects, the French software group - have gone straight for a Nasdaq listing and given European exchanges a miss.

This is not to say Easdag can play a role. Some European companies. which might be minnows on Nas dag, may feel they will get a higher profile on Easdaq. And some Euro-pean shareholders may be happier investing in companies listed on a local exchange. But progress is

Monday September 30 1996 Jardine Fleming head quit over reforms

By John Ridding and Louise Lucas in Hong Kong

ower, special engineering. IMI plc, Birmingham, England

A rift over reforms after a trading scandal prompted Mr Alan Smith'e resignation as the head of Jardine Fleming, according to the outgoing chairman of the Hong Kongbased investment bank.

"I was unhappy with the restructuring proposal," said Mr Smith, whose departure was announced on Thursday. He was referring to last week's management reorganisation and the creation of a supervisory board. His concerns include a lengthening in the line of command which could threaten opportunities in

The reorganisation fol-lowed fines of £400,000 for Jardine Fleming and compensation payments of \$19.3m (£12.3m) after an investigation revealed last month that Mr Colin Armstrong, a senior fund man-ager, had diverted profitable client trades to his own

Mr Smith said disagree ment over strategy was the only link between the affair and his resignation. Officials at Jardine Fleming, a joint venture between Robert Fleming of the UK and Jardine Matheson, the Hong Kong conglomerate, said neither Mr Smith nor other Armstrong's activities.

About 100 staff at the bank had an interest in the Ninja fund, which received some of tha trades diverted by Mr Armstrong. But Jardine Fleming said there had been no collusion among staff. "Wa have undertaken a

review of personal accounts over recent weeks and we are satisfied that no one has been advantaged in an mappropriate way," said a bank official. "Employees investing in the Ninja fund came from ecross the group, including a lot of junior staff. There was no question of a clique in the know." The bank said staff should be allowed to invest in its

appliance makers warn

By Greg Mctvor in Stockholm and Richard Waters in New York

A shift in European buying habits to lower-priced, non-branded bousehold appliinces will damage thirdquarter results at both Electrolux and Whirlpool. Against a difficult eco-nomic background, Euro-

pean : consumers have bought fewer appliances and tended to be less expensive. according to the two grows. Sweden's Electrolux, the world's largest maker of household appliances, said trading in Europe deteriorated in the quarter to the end of September - the sixth in a row in which demand had fallen year-on-year.

Mr Lennart Ribohn, depnty chief executive, said: "Wa never believed that Europe would have a strong year this year. Even in the future our view of the European market is cautious, although we see no direct deterioration from now on." The group was expecting a

pick-up in European demend due to lower interest rates but did not expect it would be felt in the final quarter. A year ago, Electrolux reported underlying thirdquarter np 4 per cent to

SKr677m (\$102m). Whirlpool of the US warned that third-quarter operating results would be 35-40 per cent below their level of a year befora – despite what it said were record results in North and Latin America. In the 1995 quarter, Whirlpool reported an operating profit of \$124m and net income of \$64m. The latest period will also include a \$30m restructuring charge.

Whirlpool elipped into loss in Europe earlier this year and, despite a "significant" improvement since then, said it would still reg-ister a small third-quarter operating loss.

Mr David Whitwam, chairman, indicated to analysis that it had been hurt in particular by lower profit margins on refrigerators.

Whirlpool's chares fell \$1% on Friday to \$50%. Electrolux chares closed SKr4 lower at SKr370.50.

Court set to act on tunnel debt talks

By Geoff Dyer in London and Andrew Jack in Peris

The president of the French commercial court will intervene in Eurotunnel's refinancing talks this week if the Anglo-French Channel tunnel operator fails to reach an agreement with its banks by today.

Mr Jean-Piere Mattei, head of the court, said last week he would not renew the contracts of the two court-appointed mediators. which run out today and have been extended twice.

The euspension of the mediation process aggravates Eurotunnel's financial position as the French court has the powers to begin administration procedures. But negotiators believe

try to use its influence to force the two sides to make tha necessary compromises However Eurotupnel and its 225 banks will have to convince the court president

that they are close to a deal and that the will exists to reach an agreement. Sir Alastair Morton, Eurotunnel's co-chairman, said earlier this month the "architecture" of a refinancing of its £8.8bn (\$13.7bn) of

debts was in place. The mediators, or manda-taires - Mr Robert Badinter and Lord Wakeham - will report to the president of the court today on the refinancing talks, which are understood to bave made progress in recent weeks.

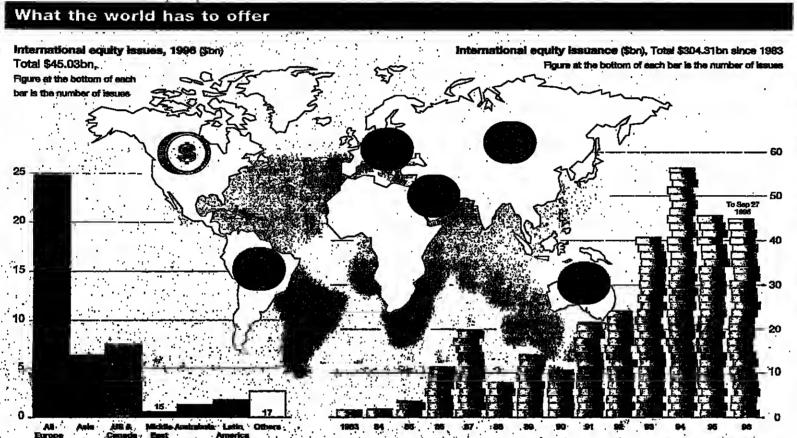

The package is expected to include an initial debt-forequity ewap giving the banks up to 49 per cent of tha enlarged share capital, and an issue of convertible bonds which will be redeemable by the company if it reaches certain revenue targets, but which could leave the banks in control of the company at a later stage. However the two sides have yet to agree the price

NAMIBIA

Offers are invited for the aquisition of at least Seventy Percent (70%) share holding in the above company.

aamba Collieries Limited is located in the Southern part of Zambia in the mining town of Maamba some 352 km from Lusaka the capital city of Zambia and was incorporated as a limited company in 1971 under the ownership of the Government through the Zambia industrial and Mining Corporation (ZIMCO).

Maamba Collieries Limited (MCL) is engaged in the mining and selling of coal to major industries in Zambia such as Zambia Consolidated Copper Mines Ltd (ZCCM), Nitrogen Chemicals of Zambia (NCZ) and Chilanga PLC, as well as for exports to neighbouring countries.

The town of Manmba has grown around the mining company which provided social facilities such as schools, a clinic, housing and other amenities such as water. This has been necessary to extract and retain skilled personnel to the remote mine

In the Southern Province Mazmba Collieries Limited (MCL) represents more than just o coal producing company; it is the largest employer and cradles the hopes and aspirations of a large proportion of the population in the province. It is also the sole producer of coal in Zambia.

Mine Capacity and Reserves A total of 78.2 million tonnes of coal reserves is estimated available in the MCL assigned area, of which 60.2 million tonnes is proven and 18 million tonnes is probable. The reserves in stock are as per January 1996 estimates. There are two open cast mines operating at Maamba in the Kanzize and Izuma basins with an annual capacity to produce between 600,000 and 800,000 metric tunnes of saleable coal, depending on demand, production capabilities and other constraints.

The Company has a ready market locally for coal with major Companies such as Zambia Consolidated Copper Mines (ZCCM), Chilanga Cement PLC, Nitrogen Chemicals of Zambia Limited and other domestic consumers. An export

market exists in Malawi, Tanzania and Zeire.

The Workforce The management and employees of Maamba Collieries Limited have all the necessary experience and qualifications required to operate Coal mining business effectively. As at 14 June 1996 there were 1,162 employees at Maamba

Key Strengths . It is the only coal mine in the country

 Large reserves of coal Well trained and professional workforce.

Unsatisfied domestic market

· Growing market demand for coal throughout the region for the indefinite future in South Africa, Botswana, Tanzania, Malawi, Namikia and within Zembia itself (with a growing private sector and re-investment in the mining sector). Strong historic links with ZCCM Close proximity to domestic and international road and rail links.

Privatisation Objectives The Privatigation of Maamba Collieries Mine must be driven by long term objectives which include: Developing MCL into a regionally competitive, growing, and profitable company, while ensuring that Zambia's national interests are not

· Contributing to the growth and development of Zambia's economy through increased employment, re-invest tax revenues and providing products and services which foster and support a thriving

· Recognizing, and incorporating as appropriate, any other interests which require resolution, such as the previous and ongoing JCI

dilitation programme. Providing expanding opportunities for Zambian Participation in management, workforce, skill development, and ownership including public ownership of shares at an appropriate time in the future.

 Transferring all company operating/financia/legal/leadership responsibilities to the private sector as quickly

Divesture Plan

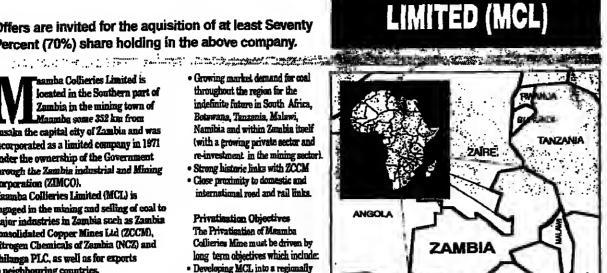

• The Prospective bidders are invited to use their own technical experience/expertise to propose the best approach and business plan for MCL. A relatively long due diligence period of four (4) months has been provided during which bidders will receive, investigate, evaluate all

pertinent information and circumstances

regarding MCL Bidders will be required to find and conduct their own exploration and analyses, as they see it fit, in order to prepare the approach and business plan which will meet privatisation.

· To enter into final negotiations with the leading hidder by the end of 1996 with the aim of concluding a comprehensive, quick, and straight forward deal.

 The business plan and future development and the deal proposed by the bidder will be subjected. to an impartial independent evaluation which will advise Government on the best alternative in the national interest.

MAAMBA COLLIERIES

of the first to experience transition to plural politics and democracy and a leader in the implementation of a privatisation programme which will establish a market economy led by the private sector. Apart from privatisation, Zambia has put in place sound policies which have, in a short period of time, reduced inflation and stabilised exchange rates. EARNINGS PER SHARE

The calculation of earnings per share is based on profit after taxation of \$48,277,000 (1995 - \$48,953,00) and on 168,965,720 (1995 - 168 881 520) shares in issue during the year. TAXATION

Deferred tax amounting to \$25,983,000 was charged against profits for the six months. No provision has been made for normal taxation as the company has an assessable loss.

COMMENT

Total coal sales of 1,944,039 tonnes for the six months (1995 - 2393,795 tonnes) showed e decrease of 17% over the same period last year. The decline in the volume of coel sales was largely a result of low demand from the Zimbabwe Electricity Supply Authority (ZESA) power stations due to scheduled refurbishment. A decision to make coal stations due to scheduled refurbishment. A decision to make coal supplies available to the Zimbabwe iron and Steel Company (ZISCO) on a cash upmort basis had an adverse impact on their ability to maintain their normal offitake. The availability of transport has also been unsatisfactory paticularly since the middle of united 906.

An agreement has been reached with ZISCO too the company to lease coke oven batteries and liner trains for an initial period of eighteen to twenty-four months with effect from 1 July 1936. The lease charges will be applied to reduce the outstanding debt due by ZISCO. At the end of the period under review, 84,000 tonnes of coke were produced from the ZISCO cake overs. In addition, the oxiding coal stackule has been

reduced from 200,975 tonnes to 149,263 tonnes. . . Coke sales of 128,555 tones (1995 - 108,602 tonnes) were 18% above

sales for the same period last year. This is attitudable to the increased production of coke to full capacity as well as sales from the ZISCO coke

The coke oven gas pipeline to ZESA's Hwange power station was successfully commissioned during May 1996 and 13,935,370 normal cubic metres of gas had been delivered by the end of the period under

Turnover and grofft before interest for the six months was 10% and 28% respectively higher than the same period last year despite a reduction in the volume of coal seles. This was due to the largest in the volume of coke sales, price increase awarded in March 1996 and a revenue from the coke oven gas sales.

The net interest position is lower than the previous year as a result of Interest on the coke over gas pipelina idens which le no longe capitalised following the commission of the project. Included in the current assets is the ZISCO debt of androximately

\$100,000,000 and stockpile of coking cost and coke amounting to \$16,349,000 and \$43,583,000 respectively.

FUTURE OUTLOOK

Demand for HPS coal is expected to improve in the second half of the year following the completion of refurbishment at Hwange Power Stallon. However, the performance on WCC coal sales will depend on the availability of transport. Demand for coice is expected to remain flort and sales from ZISCO coke ovens will improve turnover in the second high of the year. Production costs are expected to increase due to the recent selery and wage increases. Your directors have declared an inferim dividend of 0 cents per ordinary share based on the net profit after that for six months to 31 August 1996.

DECLARATION OF INTERIM DIVIDEND

Notice is hereby given that an interim dividenci number 133 of 0 cents per-ordinary share be end is hereby declared in respect of the six months ended 31 August 1998. The dividend will be paid to shareholders registered at the close of business on 18 October 1996. The transfer books and register will be closed from 19 October 1996 to 22 October 1996, both dates inclusive, and dividend warrants will be posted to members on or about 15 November 1996. The dividends payable to non-resident shareholders will be paid in accordance with Exchange Control Remulations. Shareholders' tax of 15% will be deducted where applicable

By order of the Board C.T.N. WABATAGORE

Refuge to announce sweetener for merger

By Motoko Rich

Refuge Group, the home services life insurer which is proposing a £1.46bn (\$2.27bn) merger with industry rival United Friendly, will today announce details of a sweetener for disgruntled share-The group, which has

twice postponed an extraorshareholders to vote on the deal, has designed an instrument that would guarantee shareholders access to future surpluses from its so-called assets accumulated in life company balance sheets -

These orphan assets have been at the centre of shareholder complaints about the merger terms. Since the merger was announced last month, Refuge has come under pressure from inves-tors who believe the terms disadvantage them. Perpetual, the fund manager with a 7 per cent stake, has been most vocal, declaring its intention to reject the deal

Any release of funds from the orphan assets to shareholders must be sanctioned by the Department of Trade and Industry. Although Ref-

They believe if the DTI changes its mind after the merger, surplus which should flow to them will have to be split with United Friendly shareholders. The security instrument

would put shareholders in the same position as if the surplus assets were to be released at the time of the merger. It will be transferable and independent of the on the original terms. shares in the merged group, United Assurance, which Refuge shareholders will receive if they vote in favour of the deal.

Ruling to end Brent saga

By David Blackwell

The long legal dispnte between Brent Walker and Grand Metropolitan over the acquisition of the William Hill betting chain is expected to end today with a final ruling from the independent arbitrator.

Brent Walker, which is struggling with £1.5bn (\$2.34bn) of debt, is seeking a £200m reduction in the pur-chase price. GrandMet is seeking the final £50m payment withheld by Brent, plus interest and costs - a sum that could reach £90m.

The ruling by Mr Ray Hin-

hring the arbitration saga to an end, although some residual matters remain to be settled. However, Brent Walker's chances of winning a substantial reduction in the 2685m price it agreed for William Hill in 1989 may have taken a substantial knock earlier this year. The High Court ruled in January that a clause of the 1989 sale agreement should be rectified to state that acquisition accounting be used to calcu-

late Hill's profits. GrandMet believed this was the interpretation both sides had originally agreed.

Brent Walker claimed that ton of Arthur Anderson will profits should have been calculated on the basis of sustainable profits without elements such as the write-back of acquisition provisions. On that basis, it believed that Hill's pre-tax profits for the year to September 1989 had fallen well short of the £55m warranted by GrandMet.

Brent Walker admitted at the time that it was disappointed and immediately lodged an appeal, but it has not pursued the appeal pending the outcome of the arbitration. It contends that the High Court ruling affected

More revelations from Flemings

Nicholas Denton on further surprises following the discovery of questionable trading

ings fund management affair per cent of Ninja. last week; one more immeditions for the fund management industry.

The first was the announcement that Mr Alan Smith, chairman of the Jardine Fleming joint venture, was resigning. He was a casualty of a

management reorganisation has been paid back. following the discovery that the group's star Hong Kong fund manager was diverting profitable trades into his personal account.

Flemings denied Mr Smith was resigning as a result of the regulators' action. But competitors in Hong

Kong had regarded his position as untenable ever since Flemings agreed to pay £700,000 in fines to the Investment Management Regulatory Organisation and \$19.3m in compensation to disadvantaged investors. So his departure was no surprise.

The more interesting revelation was that Mr Colin Armstrong was by no means the only Flemings executive who gained as a result of his questionable trading.

Flemings had already dis-closed that Mr Armstrong bought options, waited a day or so, and then put those that had gained in price into his own personal account while allocated losing positions in general to three client accounts. The group said a fund called Ninja, with which Mr Armstrong was closely associated, also bene-

What they did not say, and what has emerged this week, is that about 100 Jardine Fleming staff including Mr Smith enjoyed clear personal gain through their investments in Ninia.

Through direct holdings in Ninja, or indirect interests or the company pension

two fund, Jardine Fleming And even the perception of Flem- employees owned up to 20 favouritism can be damaging developments in the Flem- employees owned up to 20 It is hard to calculate how

tors with limited discretion over their own investments. Mr Armstrong may have been priming their investment performance in an irregular fashion, but they had no knowledge of that: There is, however, an

Personal account trading, while standard at all large investment banks, was particularly extensive at Jardine Fleming.

Employee money was often managed elongside that of outside clients, within the same funds, or by the same manager. From Mr Colin Armstrong, insiders appear to have received special favours, whether they knew that or not. Outside clients were disadvantaged.

Investment by employees alongside chents can be useful. It can sharpen the incentive to produce investment

But, for outsiders, there is always the risk that fund managers will for reasons of internal politics favour their which they are most evident. ups.

to the reputation of fund managers, as Flemings is now discovering.

Mr Norton Reamer,

president and founder of United Asset Management, the 14th largest investment manager in the US and 30th largest in the world, was in a bullish mood during a recent trip to the UK, writes Wil-

change in the US fund management industry and believes that UAM, which he founded in 1980, is ideally placed to take advantage. He agrees with industry analysts who talk of serious pressures pushing the fund management industry towards a period of consolidation

. However, he disagrees with those predicting that a spate of takeovers will lead to the emergence of a small number of giant fund managers. Rather, he says, consolidation will be tempered by the natural ability of small investment organisations to deliver better performance than large organisations.

ons. Money managers are by nature entrepreneurs and "simply prefer to work in small organisations, where they feel valued and able to make a difference," Mr Reamer says.

He therefore argues that investment management companies need to "be both large and small at the same time", something that UAM, with its 46 affiliates - or subsidiaries - is trying to achieve.

UAM's 46 affiliates, of which Murray Johnstone in the UK is one, have a total of more than \$160bn in assets under management. UAM became a public company in 1986 and has grown primarily through acquisitions, although Mr Reamer says through managed unit trusts colleagues or the funds in that it has also backed start

British Gas deal with which might be released after the merger. These orphan assets have Hydro fails

By Simon Holberton and Robert Corzine in London

A planned purchase by Scottish Hydro of British Gas's business in Scotland and parts of the north of England collapsed yesterday when it became plain that British Gas was unable to concinde the deal while under severe commercial and regulatory pressures. ..

It would have seen the creation of Britain's second biggest gas company, with Scottish Hydro supplying gas to 2.5m households in Scotland, Northumberland and Cumbria.

It is understood the Scottish generator would have paid more than £250m (\$390m) for the business and some of British Gas's £40bn worth of take or pay supply contracts with North Sea

producers. Neither company would last night comment on the failure of the deal but is likely to raise concerns among investors about British Gas's ability to conclude

large transactions. An adviser close to the deal said it fell through because of British Gas's inability to cope with the twin pressures of demerger and the sale of its Scottish . business. Widespread prob-lems with British Gas's billing system added to its difficulties in focusing on the

"It's extremely galling for Scottish Hydro," the adviser

Both companies know each other well: they are partners in the Seabank combined cycle gas turbine power station on Morecambe Hay.

Scottish Hydro will push sheed with its expansion in the English electricity market, a market that takes a third of the power it currently generates and will take 50 per cent by 1999.
Although the demands of

the demerger of British Gas Energy, the domestic supply and trading arm of the company, from Transco, the pipeline monopoly, was cited as the reason for the collapse of the deal, many aspects of the proposed transaction could have Mr Reamer is predicting | helped the demerger pro-

bidder opposes price cuts

By Jane Martinson

The chief executive of one of the water companies bidding for rival South West Water has warned that stringent absolute price cuts were "not do-able".

Ofwat, the industry regulator, has indicated that if the rival bids from Severn Trent and Wessex Water were to be approved the price cuts demanded would be the largest yet.

Ofwat believes customers should benefit from price cuts in the event of a take-

In an interview with the Financial Times, Mr Vic Cocker, chief executive of Severn Trent, said high operating costs in relation to turnover would make a straight price cut of something in the region of 20 per cent impossible.

"With a high margin company like South West Water," he said, "a 20 per cent cut in turnover is something like 50 per cent off operating costs. That's just not do-abie."

Even with the appointment of a new chief executive and the launch of an important new model this month, Volvo, the Swedish vehicles group, is expecting to take up to two years to turn round its unprofitable US

truck business.

Mr Karl-Erling Trogen,
head of Volvo's truck division, said Volvo GM Heavy Truck, the US subsidiary, would not break even until some time next year. "In 1998, we should get back to profitability," he said.

appointed Mr Marc Gustafson, a senior executive at rival Mack Trucks, as its new US boss. Mr Gustafson, who helped rescue Mack in the 1990s, replaces Mr Per Lindquist, who was abruptly removed last August.

Mr Gustafson'a appointment coincides with the launch of Volvo's "VN" heavy truck. The new model, derived from the successful European FH vehicle, should plug a crucial gap in Volvo's US range, which has been losing market share.

Volvo GM Heavy Truck, in which General Motors has a 18 per cent stake, slipped into loss this year after the downturn in the Class 8 market for heavy trucks and an even mora precipitous

over 15 tormes have fallen 15 per cent this year. Volvo's sales of Class 8 trucks plunged 30.5 per cent in the first seven months, taking its share of that market below 10 per cent for the first time since 1987. The impact on earnings has been exacerbated by the 4 per

cent fall in prices of new heavy trucks this year. However, Mr Trogen, who assumed control of the US subsidiary pending a replacement for Mr Lindquist, admitted the company was partly to hisme for its difficulties. Management had concentrated too much on the VN, prompting a "loss of focus on running current operations and a lack of cost

efficiency", he said. Mr Trogen has instituted sweeping cost cuts and a marketing push to stem the decline. Volvo expects to shed about 500 US truck jobs this year, while spending on materials, purchasing and general expenses is being slashed by between 5 per cent and 35 per cent.

However, Mr Trogen emphasised Volvo's commitment to the US, which was an essential part of its global sourcing and production

strategy.
"Wa have a strong commitment to North America and I am very confident we

Volvo sees US Swedish workhorse image takes a back seat

Today's launch of the sporty C70 coupé marks a move up-market for the troubled carmaker

The racy-looking new C79 coupe will be the biggest step taken by the Swedish manufacturer in its move away from the boxy workhorses for which it is famous, to a more up-market range competing with the

likes of Audi and BMW.
"The design of the C70,"
says Mr Tuve Johannesson, chief executive of Volvo'a car division, "clearly reflects the new Volvo."

The high-priced C70 is not a make-or-break model for Volvo, It will be made in sive market: But its success or failure will go some way the car division can recover from recent losses and carve out a profitable, independent long-term future.

This has been an issue since Volvo broke off plans to merge with France's Renault in late 1998. It is central to the Volvo group's post-merger strategy of concentrating on its core car and truck making operations. It is a key factor for investors deciding whether Volvo shares, which have fallen adamant the strategy of

t the Paris motor from SKr165 a year ago to show today Volvo under SKr165 a year ago to under SKr150 today, will will pull the covers of the sleekest, sportlest car it has ever made.

gramme under way at Volvo.
"The risk embodied in the car division is critical, becausa no ona except the company management proes confidence that Volvo is big enough to survive independently," wrote Salomon Brothers in a recent report on Volvo.

The task facing Volvo has

been clearly illustrated by its results over the past year. A combination of flagging sales and high development costs pushed the car division into the red in the last quarter of 1995 and the first quarter of this year.

In the second quarter, car operations moved back into the black. But a sharp fall in earnings at the truck divi-sion caused group operating profits to tumbla from SKr4bn to SKr2.3bn (\$346.9m) in the first half. These setbacks were followed this month by reports in the Swedish press -strongly denied by Volvo of disquiet within the company, and speculation about

the position of Mr Soren Gyll, group chief executive.

. But Mr Johannesson is

modelling the car division is not in question. "I'm quite sure there are all kinds of opinions, but we in the car company have e strategy and I am convinced that we are unified around that

strategy," he says. The C70 is one of what Mr Johannesson calls tha "building blocks" of the strategy. The aim is to broaden and upgrade Volvo's narrow product range, and output from less than 400,000 now to 500,000 cars a year, Volvo's vulnera. bility owes much to the high costs that a small-volume manufacturer must bear in development and production. Volvo is using partner-

ships to defray some of these out being swallowed by one costs. The C70 is the result of the world's volume car of a joint production venture manufacturers. To this end, based in Uddevalla, west Sweden, with TWR, the spe-cialist British sports car company, which will also launch a cabriolet model

next year. partnership is the NedCar production venture in the Netherlands with Mitsubishi of Japan. Volvo is producing its recently launched \$40 and V40 mid-range saloon and estata car models et NedCar on the same production line as the Mitsubishi Carisma.

But Volvo is determined to show that it can thrive with the mainstay of Volvo since

its introduction in 1992. The Sweden, has spawned several versions, including a four-wheel drive model. The 900-series saloons and estate cars complete the current

The next development will be a replacement for the 900. But this is expected to be based on a reworked version of the 850 platform, or chas-sis. Volvo intends to base its wider range of models on two basic platforms in order to cut costs further.

Since taking over the car division a year ago, Mr Johannesson has introduced tough cost controls. He says - without specifying - that he has lowered Volvo'a break-even level. Combining the earnings effect of the new cars with these new measures, Salomon Brothers predicts tha car division could achieve an operating profit of nearly SKr2bn in

That would put it well on the way to achieving its long-term goal. But Volvo has little margin for error. Every new model - includ-ing the C70 - will have to prove its worth if independence is to be secured.

First half 1996 Results

Return to break-even in 1996

Paris, September 26, 1996 - On September 25, 1996, Serge Tchuruk, Chairman and Chief Executive Officer, presented the first half 1996 results and reported the progress on Alcatel Alsthom's recovery plan to the Board of Directors.

During the first half, the Group registered income from operations of FF 0.5 billion compared with FF 1.4 billion in the first half 1995 and a net loss of FF 0.4 billion compared with a loss of FF 1.2 billion in the corresponding period of 1995.

The Board of Directors noted that the results were in line with the action program and reflected the recent trends and the still limited effects of the current recovery plan. The Board also noted that the effects of the plan, already more noticeable for the second half, enabled the Group to aim at a return to break-even for the whole year and to foresee a significant reduction in debt, taking into account the divestments already completed as of today.

At the same time, the Telecom sector's activities have been repositioned towards high growth market segments thanks to a competitive product portfolio particularly adapted to the most recent market trends.

Results at June 30, 1996

Activities during the first half were characterized by numerous commercial successes which, despite the market fall in undersea cables, resulted in a global increase of 3.8% in orders, which reached FF 81.5 billion. The growth was particularly strong in the Telecom sector. Sales during the first half, which mainly reflected delivery of orders received

in 1995, amounted to FF 74.3 billion, a decrease of 3.4% over the same period in 1995, on a comparable basis. Income from operations amounted to FF 0.5 billion compared with FF 1.4 billion

during the first half 1995.

This decrease comes from the Telecom sector for FF 0.6 hillion and the Cables sector for FF 0.3 billion: The Telecom sector's income from operations (FF -1.1 billion), declined compared to the first half 1995 (FF -0.5 hillion). However, it shows an improvement over the second half 1995 (FF -2.8 hillion or FF -1.3 billion

excluding exceptional items) and should return to a positive level for the second half. Income from operations in the Cables sector amounted to FF 0.9 billion. The decrease compared to the first half 1995 is due to the strong

deterioration in the undersea cable activities. - GEC Alsthom maintained its income from operations at FF 0.6 billion, the same level as in the first half 1995, within the context of a power generation market still characterized by intense competition. Orders

the rail transportation activities, notably in North America. Income from operations in the "Systems" activities, while negative, did improve. The loss recorded in income from operations is entirely due to the integration of Alcatel Siette where restructuring is satisfactorily

increased during the first half and major achievements were recorded in

Saft registered income from operations at approximately the same level as that of the first half 1995. The activities continue to grow, particularly in

high potential technological markets. The increase of FF 0.8 billion in net income, is mainly due to a reduction in income tax and an increase in net income of equity affiliates.

During the first half an income tax credit of FF 0.1 billion was registered compared with a charge of FF 1.3 billion during the first half 1995. This difference is partly due to a decrease in income from consolidated companies, but mainly reflects an improved management of the Group's. worldwide tax position, and the effect of recognizing tax consolidation in the year in which it occurred, in compliance with international accounting

In addition, net income of equity affiliates, which include notably the results of Havas, Framatome, Shanghai Bell, and Colira (after exceptional items), increased from FF 0.1 billion in the first half 1995 to FF 0.8 billion in the first half 1996.

Progress of the Recovery Plan

The plan announced a few months ago is progressing according to

 Half of the FF 10.0 billion asset disposal program has been achieved. It should be completed in the coming months, which will result in a substantial reduction of the debt to equity ratio. This refocusing is complemented by the simplification of the Group's legal structure wherein the number of legal entities has already been reduced by more than 300, representing one third of the previous count.

The objective of achieving global savings of FF 7.0 billion per year by 1998 is maintained.

Restructuring measures, mainly concerning the Telecom and Cable sectors, have become indispensable due to the radical changes occurring in the Group's economic environment. Since mid-1995, close to 20,000 job reductions, principally in Europe, have been announced or realized in these two sectors. The subsequent plans seek all possible solutions to reclassify affected employees.

Simultaneously, the Group has began a program to significantly reduce (by FF 10.0 billion) its gross operating assets as well as its administrative expenses which could allow annual savings of over FF 2.0 billion.

Redeployment of the Telecom business

The Group's Telecommunications sector has undergone significant changes during the last months, which deserves a special comment.

The first half 1996 was characterized by a clear resumption in orders (+ 21% compared to first half 1995) and of sales (+5%) despite a decrease in switching, which is due to a drop in prices, the shrinkage in some major markets, in particular France, and the significant decrease in exports to China, where local production has considerably increased. To respond, the Group has reinforced its software and service offerings in switching, in order for it to remain one of the major key elements of Alcatel's portfolio.

Conversely, the product portfolio is undergoing significant transformation, favoring sectors with high growth potential: transmission, access systems data networks, mobile infrastructure. Orders and sales will progress by more than 40% in 1996 in the field of transmission. This development is especially accelerating in the U.S. where sales have doubled over the last four years, passing the one billion dollar threshold this year. Similarly. in access systems, where the market is expanding strongly (+20% per year), Alcatel will also register a growth in its orders and sales of over 40% in 1996.

The strategy of alliances and partnerships is being pursued, tirrough cooperation with Sharp in the mobile handset activities, and with the signing of an agreement with Motorola regarding mobile communications infrastructure (CDMA and DECT standards) and for the cross supply of

All of these actions together should allow the Telecom business to regain a significant growth rate in the coming years (+5% to +10% per year).

"Safe Harbor" statement under the Private Securities Litigation Reform Act of 1995: This press release contains certain forward looking statements relating to the Group's expectations regarding results for the full year 1996, expected savings from the recovery plan, and the Group's asset disposal program. Such expectations assume (1) that anticipated costs of the recovery plan will not increase; (II) that operating results and each flow from operations will not be affected by unexpected factors including market declines, the effects of privatizations or deregulations in the telecommunications sector (including changes in the investment strategy of major operators), increased competition, the development of new technologies, increases in other costs, or changes in volume: and (III) that the Group will be able to divest non-strategic assets in a satisfactory mariner. Actual results could differ materially from the above as a result of these or other factors.

Spring date for decision on French bourse times

By Andrew Jack in Parts

The French stock market will decide by next spring whether to extend its opening hours until 9pm, to gain an advantage in the intensifying battle between European equity markets.

The extra hours would allow trading in French shares to continue until closing time on Wall Street. A high proportion of trades are already driven by the US market. Some 40 per cent of volumes on the Paris bourse take place in the last two hours before its existing closing time of 5pm.

There is a growing buttle between exchanges for business, partly because of the EU investment services directive that came into force this year. The new pan-European Easdaq market for high-growth companies has also just been launched.

The Société des Bourses Françaises (SBF), operator of the French stock market. is modifying the rules for its own fast-growth nouveau marché, which was launched in March but has had a disappointing first

few months. The SBF is planning close co-operation with markets in Germany, Belgium and the Netherlands, and has modified the rules of its "off-market" frades to

mcourage new busines The proposals to change the opening hours of the bourse have caused considerable controversy, and the timetable for recommendations has slipped by several nonths. A number of banks have said the extended hours would require two shifts of different staff each day, raising costs and causing concern among unions. To ease settlement, the SBF is considering a "cutoff" at 5pm each day, after

which trades would be rolled forward for accounting to the next day. The proposals could also cause problems for morning newspapers, which would miss reporting a lot of finan-cial information which is only released after the mar-

kets close, as well as final

closing prices. The SBF is discussing release of sensitive financial information with the COB, the French markets regulator, although it has taken the view that such information should only be provided after the markets close.

INTERNATIONAL NEWS DIGEST

Oracle focuses on intranet software

Oracle, the world's leading database manageme software supplier, aims to become the top provider of software for building intranets - private networks based on the standards of the internet. The strategy places Oracle on a collision course with arch-rival Microsoft, which is also looking to dominate the fast-growing market for intranet software.

On Tuesday, Oracle plans to launch Network Computing Architecture, which would link existing mainframe and distributed computer systems with the latest Internet technology. Its ambitions in intranet software also overlap those of Netscape, the Internet software leader, which is focusing increasingly on the

corporate intranet market. Oracle plans to marry old and new technologies with "middleware" programs that enable older computer systems to be plugged into an intranst network. The NCA is based on standards developed by an industry consortium and available to all software developers Oracle stressed. It said it would transcend standards battles over Internet browser technology.

Louise Kehoe, San Francisco

Ifil declines in first half

Ifil, the Agnelli family's industrial holding company which has a 13.8 per cent stake in Flat, posted group pre-tax profit down from L374bn to L349bn (\$229m) for the six months to June 30. Parent pre-tax profit rose to L151bn from L114bn. Net assets at June 30 were L164bn compared with net debt of L26bn at end-1995, and the group forecast improved full-year results. AFX, Milon

Barito Pacific growth warning

Indonesia's Barito Pacific Timber, one of the world's largest exporters of tropical hardwood plywood, said first-half operating income grew 58 per cent as revenues improved on higher plywood prices. Net sales grew 4 per cent to Rp427.9bn (\$184.5m). However, interest income, which still accounts for the bulk of its pre-tax profit, fell from Rp83bn to Rp78.7bn. First-half net income fell to Rp37.2bn from Rp38.7bn, while operating income grew to

Rp22.9bn from Rp14.5bn. Barito Pacific is expanding into pulp production, which will eat into its large cash pile. As a result, "interest income will continue to decline and we will not see much in the way of profit growth", said Mr David Stormont, analyst at Jardine Fleming Nusantara in Jakarta. Manuela Saragosa, Jakarta

Telekom quiet on dividend

Deutsche Telekom, which publishes its preliminary share issue prospectus on Friday, will pay shareholders an 'above average" dividend next year, Mr Ron Sommer, chief executive, said. But the company declined to comment on a report in Focus magazine that next year's dividend pay-out would total DM8bn (\$1.97bn), double the 1996 level. Focus said the dividend, combined with tax credits, would give the shares a yield of about 6 per cent.

Mr Sommer, interviewed by Welt am Sonntag, the Sunday newspaper, said Telekom expected a sharp turnover and profits improvement in the second half of 1996. First-half net profits fell from DM3.5bn to DM129m as the result of a one-off charge for redundancy costs. Andrew Pisher, Frankfurt

Deutsche Babcock sells units

Deutsche Babcock, the struggling German engineering group, has raised DM180m (\$118m) through the sale of two subsidiaries. Velan Inc. a Montreal-based joint vanture, and Bergemann, a German company. Both companies specialise in cleaning heating surfaces in power station and industrial plants.

Elbrar, the

7.

Yet backers of Easdaq. which include some 80 European financial institutions, remain confident of the market'e success. They were on hand at a conference in London earlier this month to assure 200 potential partici-pants - bankers, fund managers and brokers - of a bright future for the pan-European market.

In the past 18 months, similar declarations have been made on behalf of the nouveau marché in Paris and the Alternative Investment Market in London. Plans for German and Belgian junior markets are under consideration, as is a scheme to link the Frankfurt, Brussels and Paris versions in a pan-European exchange

Is there room for another alternative bourse? The results for the UK and French junior markets so far have been mixed. Aim has scored well. In just 18 months it has attracted more than 200 companies with a combined market value of niche attracting high-growth more than £4bn (\$5.25bn). It companies. Nasdaq has even has benefited from the closure of another jumor market in the UK, London'e sophisticated investment culture, and the bull market.

The nouveau marché, on the other hand, has got off to a slower start. Since its launch in February, it has attracted only 12 listings. The French authorities announced a revamping of

the its rules last week in the face of the increasing compe-

However, Easdag's backers are adamant a gap exists for the new market. Mr. Jonathan Freeman, head of list-ing at Easdaq, said: "There is a great need for something like Easdaq – a market for high-growth European com-panies with international aspirations which want to raise capital. We are not rivals to either Aim or the nouveau marché, which are for smaller companies."

Easdaq is hoping to under-pin its credibility by model-ling itself on Nasdaq, the US market which has carved a taken a small shareholding in Easdaq and has struck an innovative agreement which allows Nasdaq members to list on the European market.

Indeed, the first companies to list will be Nasdaq members. Mr Jacques Putzeys, Easdaq chief executive, saye there could be eeven capital-raising flotations tory systems in Europe' to within the first few months. underpin investor confidence. The regulators' role will be crucial to how the new market fares.

Mr John Alexander, a director of the TR Smaller Companies Investment Trust, said Easdaq will prove attractive if it can provide liquidity. In the US, there is a constant stream of small investors oiling the market and stopping it getting stodgy from just institutional investors - that's what Easdaq needs."

He said the quality of companies would also be a crucial factor in attracting investors. However, another fund manager said: "The danger for a new market like Easdaq is that if companies are good enough to float, why not list on the national main market?" The answer to this may lie in the ratings attached to high growth stocks by the new market. Nasdaq has traditionally given superior valuations to high-growth companies, and Easdaq will be hoping its investors follow suit, which in turn will attract more

Mr Neil Austin, head of new issues at KPMG, believes US investors will have an important role to play in Easdaq'e development. "Clearly there are a lot of US investors not exposed to Europe who could be interested - particularly given their experience with Nasdao."

WEST RAND CONSOLIDATED MINES LIMITED corporated in the Republic of South Africa) (Registration number 01/01978/06) (WRCM or the Company)

Notice to holders of share warrants to bearer Proposed distribution by WRCM of 18.3% of the shares of Kalahari Goldridge Mining Company Limited ('KalGold')

and separate listing of KalGold

INTRODUCTION

On 18 and 27 September 1996 Nedbank Investment Bank announced, Inter alia, that: - the directors of WRCM had resolved to proceed with the distribution by WRCM to it's shareholders of 18.3% of the 95,123,380 issued shares of KalGold (the distribution"). The distribution will be implemented by way of a dividend in specie

in terms of the distribution WRCM will distribute to its shareholders 17,424,676 ordinary shares of 1 cent each in KalGold ('distribution shares'), for no consideration, in the ratio of 100 distribution shares for every 100 WRCM shares held

the Johannesburg Stock Exchange ('JSE') had granted a listing of the entire issued share capital of KalGold, consisting of 95,123,380 ordinary shares of one cent each, in the Gold — "Witwatersrand & Others' sector of the JSE lists with effect from the commencement of business on Monday, 14 October

- the distribution will have no material effect on the earnings and dividends attributable to WRCM

RATIONALE FOR THE DISTRIBUTION AND SEPARATE LISTING

The distribution and separate listing of KalGold will:

- increase investor awareness of the Goldridge project: - result in KalGold shares becoming tradeable; and

1996, the effective date of the distribution

- result in WRCM shareholders directly holding part of their investment in the Goldridge project in the form of KalGold shares

ACTION TO BE TAKEN BY HOLDERS OF WROW SHARE WARRANTS TO REARER In order to participate in the distribution, holders of WRCM share warrants to bearer are required to surrender coupon no. 118 detached from share warrants to bearer, together with a duly completed fisting and surrender form (in duplicate) to one of the Company's bearer agents listed below.

The trend is your friend for Emu

returning to their desks today after a September holiday could be excused for thinking that their trading screens are

For the relationship between the prices of so-called "high-yielding" Italian. Spanish and Swedish bonds and German government paper - typically measured by the differential or "spread" between vields has shifted sharply since the

end of August. Swedish 10-year bonds now yield nearly more than a third of a percentage point Swedish paper was trading at a price yielding nearly half a percentage point countries could join Emn more. Spanish bonds of the

a price which yields only 3 year spread over Germany basis points more than gilts reached more than 5.75 perand, after a surge in prices on Friday, the gap between the yields on Italian and German bonds is now close to its narrowest ever levels.

The spreads of these highyielding markets over Ger-many have waxed and waned in line with the market's perceptions about European convergence prospects over the last five years. In January 1994, the Swedish yield spread over Germany fell to only 85 basis points, and in April of that year both Italy and Spain less than UK glits. As trading at roughly their recently as mid-August present levels compared with Germany.

faded, yield spreads bal-

centage points less than a year ago. In September 1995, Spanish bonds were generating a yield of more than 4.25 percentage points over Germany, while the Swedish-German 10-year yield spread reached 4.5 percentage

points in April last year. Nevertheless, the vigour and pace of the current rally of the high yielders seems to have been a genuine surprise to traders and analysts who carefully scrutinise each and every basis point

One trader at Liffe said on

Friday that he had never seen such a consistent and strong one-directional move in the bond futures market as that which has occurred

in the Italian BTP pits over the last few days. As price rises make even the most bullish forecasts look relatively cantious, analysts have been hurriefly revising their figures. They point to a fundamen-

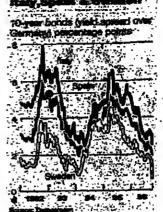

tal shift in the way investors and traders view the pros-pects for Emu, with both core and peripheral economies looking more likely to meet the Maastricht criteria on inflation, debt and the fiscal deficit. For one thing even the so-called "peripheral" countries - like Italy, Sweden and Spain - are all making progress on inflation. There have been signs that economic growth is beginning to pick up again in France and Germany,

making it more likely that

the so-called core countries

fiscal deficits to 3 per cent of GDP. Above all, though, the Swedish, Spanish and Italian governments appear to have investors convinced that they are seriously intending to take fiscal action sufficiently radical to permit them to become, if not founder members of European Monetary Union, then members very soon after the launch of the union in 1999. The decision earlier this month by the European Commission to allow France to incorporate a one-off Fr37.5bn payment by France Telecom into its budget calculations has helped, encour-aging bopes that other governments might benefit from this flexible interpretation of

the Maastricht rules.

which Spain and announced a Ptas1,200bn deficit reduction package on Friday - look set to meet the 3 per cent level And last week news that Italy intended to introduce a savere L63,500bn deficit reduction package has ushered in the once unlikely possibility that Italy too might meet the Masstricht target in 1997. According to local analysts, the decision 0.5 8.6 20.2

to toughen up the budget package reflects the Italian government's perception following the recent Dublin meeting that the EU is not prepared to water down the Masstricht criteria and that Italy's more cautious existing strategy - elower progress towards the 3 per cent fiscal deficit target with a view to enter Emu at a later stage - carried its own political risks. The rally could

still come unstuck. Hopes of French growth could prove illusory. Political cons has proved notoriously fragile in Italy in the past, and the dollar, whose etrength has bolstered high-yielding currencies against the D-Mark this year, could weaken. But for the moment, at least, even for Emu bears that old stock market axiom applies. The trend is your

French bank likely to slip back a net profit of FF. first half of 1996. into red

Crédit Lyonnais, the troubled French bank, is scheduled to report a firsthalf net loss on Thursday. The bank and the government were putting the finishing touches to a rescue plan, the third since early 1994, which would be made retroactive so Mr Jean Peyrelevade, chairman, would not have to report yet another slide into deficit, they said. The bank only just managed to break even in 1995 after a FFr12.1bn (\$2.3bn) loss the year before. Left to its own devices,

FFr285m-FFr1.55bn with forecasts focusing on FFr600m-FFr800m range, analysts said. The bank had a net profit of FFr36m in the

■ GIB: The Belgian retailer, is expected to announce first-half results on Thursday. They are expected to be weakened by a poor first-half showing by its Quick Restaurants - which traditionally generate a third of prof-- and the home improvement units in

France and the US. Mr Bruno du Bus from Puilaetco said: "I have a negative fundamental point of view for GIB." He is not giving a first-half forecast and said he was not estimating whether GIB would show an improvement on the BFr645m (\$20.6m) net profit a year ago, but estimated a Credit Lyonnais would post BFr2.2bn net consolidated a first-half net loss of profit for the full year, com- House of Fraser. The trou-

pared with BFr3.157bn a year earlier.

Quick's net profit in the first half fell from BFr147m to BFr7m. "Quick is very important for GIB and it published bad first-balf results," Mr Du Bus said. Above all, GIB was present in sectors which all suffered.

■ Kemira: The Finnisb chemicals group, is expected to report its eight months to August profit after financial items on Thursday. Analysis expect them to be FM570m-FM640m, up from FM478m (\$104m) a year earlier, with sharply reduced profits at its nigments operations offset by a strong performance in its other core businesses. They also expect Kemira to provide further details of its planned issue of FM8m shares.

bled UK department store group, is expected to armounce 10 store closures alongside deeper interim es when it presents its strategic review tomorrow. Analysts will want evidence that Mr John Coleman, the new chief executive, has a coherent and achievable recovery plan after disappointing results and the slump in the group's shares

In addition, both Sweden

since flotation in 1994. Losses of between 14m to £8m (\$12.4m) are forecast in the traditionally weak first half, after £4.3m a year ago.

Hewden Stnart: The UK's largest independent plant hire company, will unveil its interim results on Wednesday and analysts are expecting solid growth in profits despite a deterioration in

trading conditions during

NatWest Securities is forecasting pre-tax profits of £19.7m (\$30.5m), against £16.2m, on higher turnover of £141.8m. Longer-term concerns about the weakness in UK construction and a competitive pricing environment will remain, but investors will take heart from the group's record of riding out the difficult periods better

Bank of Scotland: Reports interim results on Wednesday having emerged from a period of turbulence caused by the sale of most of Standard Life'e 32 per cent stake in the company this year.

Analysts are concerned about a sharp rise in expenses, and there are also questions about asset quality as the loan book expands fast. They will also look for signs of how well last year's

purchase of Bank of Western Australia has gone.

Pre-tax profits for the full year ending February 1997

are expected to fall in the range of £570m to £620m (\$961m). The results for the first half to August 31 are forecast to be between £270m HTV: The ITV company

for Wales and the west is. expected to continue its upward trend in profitability. on Wednesday with interim pre-tax profits of about 26.5m (\$10.1m). This compares with 28.1m

last time but only £2.8m in the first six months of 1994 can be sure that its gaze will be elsewhere - watching to to see whether Mr Michael Green's Carlton Communications can overcome his dis like of the high ple and really will make a bid, or wbether CanWest; the Canadian-based international broadcaster, is serious about pursuing an interest,

Blenheim Group: The UK exhibitions organiser which has been the subject of an on-off bid bettle, is expected to announce a sharp rise in interim pre-tax profits on Wednesday, Analysts are forecasting

pre-tax profits of \$25m-230m. up from £13.1m (\$20.1m) when the group was held back by losses at its French business. Elembaim will also be under pressure to give has made particularly in more information about a developing programme further takeover approach it rights. But whatever the said it received two weeks ago. Earlier in September, it had ended announced it had ended talks with a potential bidder, believed it be United News & Media.

IMPROVED FIRST-HALF 1996 RESULTS

Income before exceptional items; and taxes # 15% : (Net section) (group share): + 25% THE WALL PROPERTY.

The Board of Directors met on 25th September 1996 under the chairmanship of Mr Jerôme Monod to review the consolidated financial statements as at 30th June 1996.

CONSOLIDATED RESULTS

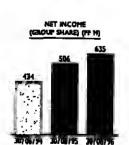

In FF millions	First half 1996	First half 1995	Change	1995
Revenues	- 44,370	48,346	-8%	98,615
income before exceptional items and rax	1,703	1,482	+ 15 %	3,617
Net income (group share)	635	596	+ 25 %	. 906
Coch flow	7 101	3710		

First-half 1996 revenues were contributed 54% by environmental services, up from 46% on 30th June 1995. This creed reflects stronger focus on the group's core business lines following the divestment of the funeral services division (OGF-PFG) and the partial disposal of the electrical supplies distribution division (Westburne). On a Fige-for-like basis, revenues growth amounted to 1.7%.

income before exceptional items and tax and net income (group share) rose by 15% and 25% respectively, notably owing to the buoyant environmental services and communications divisions. Cash flow amounted to FF 3.2 bn, flat on last year, and represented 7.2% of revenues, against 6.7% on 30th june 1995.

TREND BY DIVISION

First half 1994 Environmental services - 715 24,067 21.950 585 44,433 1.300 18,755 21,423 - 31 43,959 211 INTERPORTURE CON 791 37 642 48 1.406 . 69 757 - 111 4,330 - 96 6,817 - 675 of which property de 227 - 104 294 - 120 444 - **298** 44,370 635 43,345 506

The group continued to gain share on the international water distribution market, notably thanks to the successful takeover of Northumbrian Water, Managed revenues generated by International water distribution operations now exceed revenues posted within France.

The refocusing on core business lines and cost cutting program implemented at the energy division since 1995 year-end is on target and business was lifted by favorable weather conditions.

Revenues and profits of the waste management division continue to grow at a sustained pace, notably internationally. In the Communications sector, the group successfully pursues the commercial development of M6 and Lyopnaise Communications, as reflected in 13% growth of nevenues. The group is about to launch additional services on its cable networks and holds a stake in TPS, the satellite T.V company, held 10% directly and 20% through M6. Revenues of the construction and infrastructure concessions division dropped by 4%, burt by the sluggish French building and road construction markets. Orders remained flat at FF 30.8 bn.

Property development losses were reduced to FF 100 m, in line with the drop of inventories to FF 2.2 bn.

RECENT DEVELOPMENTS

The Board of Directors noted with satisfaction the new international water distribution contracts won in the United States, Australia, Turkey and Palestine. it further confirmed the group's strategic objectives; refocusing on business lines ensuring steady operating profits and international growth,

Rush of offerings for October

Recent stability on the US stock market and pent up demand for capital has led to a potentially record-breaking rush of companies seeking to offer their shares to the pub-

More than 100 companies with market capitalisations of at least \$50m are set to launch initial public offerings next month, according to Renaissance Capital, a firm that analyses IPO valuations. That figure rivals the 104 such offerings that were issued in all three months of

the third quarter. The pace of offerings began to pick up last week when 22 deals hit the market after three weeks in which a total of only three new com-panies were listed.

in July and August, the rate of offerings fell off sharply as traditional summer · doldrums combined with turbulence on financial. markets to make new listings unattractive. In recent weeks, however, financial simple supply and demand.

markets have soared, and so has the number of companies hoping to proceed with IPOs while they can get high

prices for their stock. Equity issuance generally ebbs during the summer, but the slowdown this year was particularly pronounced in part because of the recordbreaking pace of the IPO market in the first half of this year. Just \$7.6bn was raised by companies going public in the quarter that ends today, compared to the record \$18.5bn raised in the second quarter, according to

Securities Data Still analysts are overwhelmed with the number of new companies going to market now. "We have never seen it like this," says Mr William Smith, an analyst at Renaissance Capital. "We are continually amazed about the ability of the mar-

ket to absorb this." One reason for the market's absorptive powers is

Corporations are taking a record number of shares off the market through buyback programs as huge inflows to equity mutual funds are adding to demand. The amount of money flowing into equity mutual funds

jumped to \$18bn in August

after dipping in June and

Although the rate of offerings may now be approaching its levels of the spring there the tone of the IPO market has changed. In the spring the offering calendar was heavily weighted toward technology companies, espe-cially much-talked-abont Internet-related offerings that were able to attract even if profits were years off.

Now, the spate of IPOs set to come to market represents a broader range of the US economy. One of last week's best performing of Abercrombie & Fitch, the specialty retailer being spun off by the Limited Shares in the company ended the week the \$16 offering price.

Still, some analysts and money managers are worried that even though there is less ballyhoo surrounding the new offerings, the overall quality of the deals

emains low. Mr Mark Barsham, a new issues analyst at Standard & Poor's, cites Navigation Technologies as an example. The company, due to go public this week, makes sophisticated automotive computers that use satellite technology to provide directions for drivers, but it has never turned a profit and large amounts of capital does not expect to before

2001. Mr Aash Shah who manages a \$50m small capitalisation stock fund for Federated Investore, says careful research is more important than ever. "I think the quality has diminished as the

MARKETS: This Week

The wave of bond market euphoria which greeted the Federal Reserve's decision not to raise US interest rates last week is likely to fade this week, as investors focus instead on the inflationary implications of the next batch of economic data.

S. American of Selections 2.

Comment of the same

1.00

141

But the bond market's favourable reaction to the news suggests investors are not worried that the Fed's decision was motivated by political concerns, ahead of the November election, and are willing to believe that current rates are justified by economic fundamentals.

The focus this week will be on Friday's employment numbers: MMS analysts have forecast a rise in September non-farm payrolls of 175,000 and a slight rise in the unemployment rate to 5.3 per cent.
Also under scrutiny for

inflationary pressures will be the September National Association of Purchasing Management survey of manufacturing activity on Tuesday. Analysts expect the index to rise to 53 per

The stock market managed only a lacklustre performance last week, after a strong run earlier this month, resisting the upswing in the bond market. Investors will be looking at the trickle of third-quarter

results this week for signs of whether US companies earnings growth is sustainable

Morgan Stanley's third-quarter results on Wednesday will provide a useful pointer to the performance of other investment banks, which report later in the month. Morgan Stanley's third. quarter ended on August 31, so the numbers will not be boosted by the recovery in investment banking activity in September.

Interest rates did not go up in either the US or the UK last week, but stock markets may feel that their sentence has been postponed rather than commuted.

Equities and gilts reacted with some relief to the decision by the US Federal Reserve, in particular, not to raise rates, but they may feel differently if, on Friday, the US non-farm payroll figures show strong economic growth. Bond markets might start to feel that the Fad was taking too many risks with inflation.

The main UK economic data this week will be the MO money supply figures, consumer credit, and the purchasing managers' index. Unless the data are dramatically strong or w they seem unlikely to resolve the perceived stalemate between the governor of the Bank of England (who is believed to want higher rates) and the

chancellor (who may still be hankering after a cut). The equity market will have some corporate developments to get its teeth into; Hanson floats off Imperial Tobacco and Millennium Chemicals while trading in Thistle Hotels starts on Wednesday. The big bid remains elusive. Cadbury Schweppes

briefly aroused the

Friday, but previous rumours about Footsie stocks have not been substantiated.

Gilts investors might focus on the Labour party conference. Mr John Shepperd of Yamaichi International (Europe) said the market will ask two questions: "Will there be any further clues on prospective economic policies and will it give the general impression of a party ready to assume power?

hond market also had a positive influence. Deutsche Morgan Grenfell maintains its optimistic view of German equities, noting that foreign investors were net urchasers in May and June for the first time since the fourth quarter of 1995. The DM17bn (\$11.2bn) inflow in those months more than offset the outflow.

"We believe that the trend of foreign investors building positions should continue, in light of the dimme prospects for Wall Street and the more favourable outlook for the German market,". DMG said in its latest equity monitor. It expects cautious German institutions to become more active buyers of German shares as bond

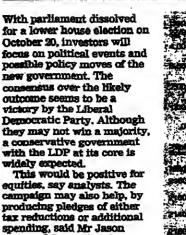

yields edge up. It is sticking to its year-end DAX forecast of 2,700 points, based mainly on the favourable outlook for

corporate earnings. It has become less gloomy about the construction sector, and says signs from the automotive industry remain encouraging, DMG is also

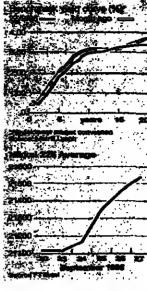

bullish about chemicals. After their recent run-up on the back of merger and takeover speculation, bank shares have run out of steam, however.

Moody's, the rating agency, has been casting a critical eye over the long-term debt ratings of Deutsche and Dresdner.

James of James Capel. Some sectors of the equity market have already begun to rise on the back of such an expected outcome. Steel stocks have risen on hopes of increased public works spending while realtors were higher on expectations of measures to support property prices by the new

"It is more likely that we will have e supplementary budget with the right-wing dominated government," said Mr Ken Okamura at Dresdner Kleinwort Benson in Tokyo. Any government which is stronger than the present coalition will want to show its strength by pressing for greater spending.

A victory by conservative forces will also mean that there could be measures to support real estate prices in order to aid property communies and other businesses affected by the

slide in property prices. However, a pure LDP government would cause the current push towards bureaucratic and business reform to fade, reducing Japan's economic growth potential and allowing problems to continue to accumulate, said Mr James.

ALCOHOLD ST

Omens poor for gold event

could have hoped for better mens in the lead-up to the Mining Investment Forum they are bosting in the Colorado capital this week.

The representatives of some of the world'e largest gold mining companies who are attending the five-day event could be looking over their shoulders as speakers outline brave plans for the future to see whether a continuation of last week's speculative pressure on the gold price is eating into their profit margins,

After a falled rally attempt late last month the market has been on the slide, and by the end of last week the price was poised uncomfortably close to a critical sup-

ounce it was only \$1 above a key psychological level and \$2 clear of a key technical level. And analysts were warning that if these were breached the price could challenge support at \$375 or even \$372 an ounce.

Part of the reason for the weakness was Thursday's statement by the chief of the International Monetary Fund that the fund had the necessary majority to sell 5m ounces of the precious metal to belp pay for debtfunding aid to poor coun-

That factor was not new to the market - the amount of gold involved had previously; been shrugged off by at least one analyst as "insignifi-

The Denver Gold Group port point. At \$381 a troy cant" - but with the bears apparently in the driving seat for the present it seemed to have assumed greater potency.

• The platinum market has also been very weak of late (on Friday it ended only a little above an earlier 33month low) and that could add spice to a presentation by Impala Platinum of South Africa in London on Friday.

"Platinum and silver really depend on gold, and if gold goes, then they will as well," a London precious metals dealer told the Reuters news agency on Friday after the London platinum price ended at \$385.75 an ounce. That was 25 cents up on the day but still \$1.50. down on the week.

PARIS

Economic news could be back to the fore in Paris this week with the latest Insee business survey due to be published today. The survey. for September, coincides with the release of the August unemployment numbers; together they are expected to provide bourse investors with an important snapshot of the economy.

The Insee survey will fill in some of the detail on how business is shaping up after the summer recess. Secondquarter data gave a relatively downbeat reading of French business sentiment Investors will be hoping for a return of more positive trends. As for corporate results,

Wednesday from electronics leader Schneider, and media group Havas puts out a halfyear statement on Thursday.

Solid profits news was one reason for the stock market's rise last week, to within a comfortable range of its April peaks. Schneider and Havas are expected to add to the trend of strong earnings growth. Paribas is likely to remain a focus of speculation about imminent corporate activity.

All in all, the Paris bourse. which has moved back above 2,100 on the CAC-40 to close to its April peaks, should not be short of talking points.

Olivetti is due to publish its full first-half financial report today, before meeting finanthe news flow is starting to cial analysts in Milan on slow. Interims are due on Thursday and London on

Friday. The troubled electronics company has already answered 16 questions about the interim report, posed by the Milan bourse watchdog. However, as recently as last Wednesday, the head of Consob told Parliament be still did not have adequate clari-

Sales and net income growth in the first half of 1996 in line with targets stated at the time

Sales: +11.5%

Group Share of Net Income: +22% The GUYOMARC'H N.A. Board of Directors, chaired by Mr Alan DECROP, approved the group's ts as at June 30 on September 26, 1996.

CTIVITY IN THE FIRST HALI	F OF 1996		
In million FFr	30.06.95	30.06.96	96/95 Change in %
Sales	1,954	2,179	+11.5
Operating Income	61.8	54.7	-11.5
Group Share Recurring Net		1	
Income before Goodwill	29.7	28.2	-5.1
Extraordinary Income	_	8.6	NS
Group Share of Net income	28.7	35.0	+22.0

Sales for the first half of 1996 increased by 11.5%. The growth is especially high in the international division after the consolidation of SIPRA (Ivory Coast) in which the Group has taken a majority

Like for like growth with constant exchange rates is 2.8%.

The 9% increase in France is essentially due to the consolidation of the accounts of NOVALIMENT and OFTEL in 1996.

Feed sales increased by 4.6% in volume.

Premix sales (minority interests) registered a 4.2% increase in France and 10.2% increase in the international division in volume terms

Finally, the Animal Health division registered a 9% sales increase, thanks especially to strong sales growth of the Paciflor probiotic in Europe.

RESULTS IN THE FIRST HALF OF 1996

Recurring Income

Despite an unfavourable context due to high commodity prices, the operating income in the first half of 1996 is in line with forecasts for the current fiscal year.

With an unchanged consolidation basis, operating charges remain firmly under control. The same applies to interest charges with falling interest rates to a large extent, off-setting the impact of the special dividend distribution of the end of 1995.

Corporate tax registered a share decrease, essentially ascribable to Brazil.

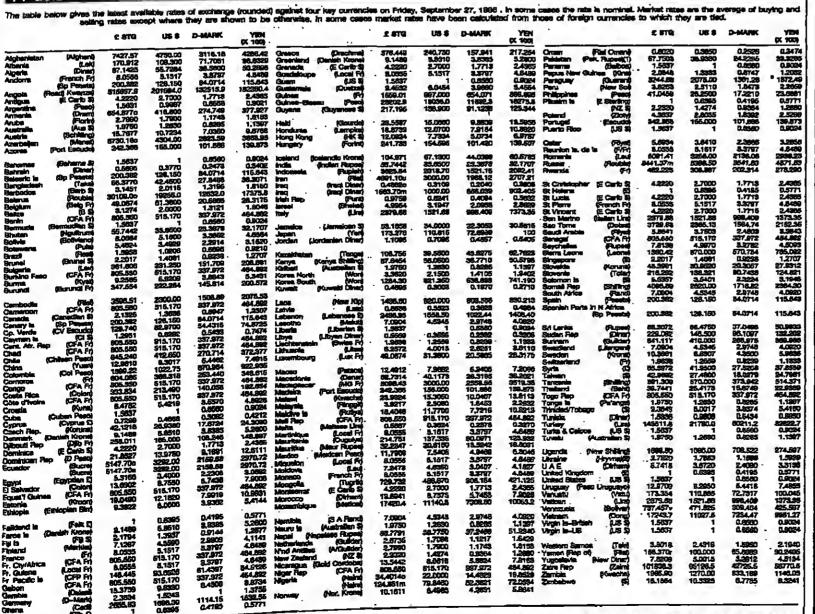

The group share of recurring net income before goodwill amounts to FFr 28.2 million. It stands at a level close to last year, despite being disadvantaged by stock market listing expenses. The FFr 8.6 million exceptional income is in line with the figure given at the time of the stock market listing. It corresponds to the net corporate tax gain on an insurance compensation received

following a silo collapse at a plant in France. Net Income

The group share of net income recorded an overall increase of 22%

The group had announced a 1996 target for the group share of net income of FFr 55.4 million at the time of stock market listing. Heving realised FFr 35.0 million in group share of net income as at June 30 1996, including FFr 26.4 million in recurring net

bit sorry for Russia's ence, Mr Anatoly Chubais, weather-beaten market reformers, who learned last week that their president's cardiogram counts as an important economic vari-

Since 1991, Russia's economic team has been buffeted by almost every imaginable political challenge: an attempted hardline coup, an armed battle between the president and parliament, a humiliating war with a separatist province, and, this year, a tense election race against a popular communist cendidate.

But in the face of these political storms, the reformers have somehow managed to shift their country from central planning to ths beginnings of a market economy. More than 80 per cent of the industrialised workforce are employed in at least partially privatisad enterprises. And, after years of runaway inflation, prices fell slightly last month, and the rouble has stuck to an exchange rate band against the dollar established by the

With President Boris Yeltsin's election victory in July. the architects of this capitalist revolution were confident that the country would at last begin to enjoy the fruits of five years of traumatic

It is hard not to feel just a post-election press confermastermind of Russia's mass privatisation and the president's chief of staff, voiced a widely shared view that Russia's economic take-off would be so swift that foreign investors had better enter the market while there was still something left to buv.

PHEROING MARKETS By Chopsing release

That prediction fell flat almost immediately after the ballot, when investors who had been pushing the market up on tha strength of polls predicting a Yeltsin victory began to sell as rumours about his health gained currency. The rumours led to a July

slump of about 30 per cent. The markat rebounded in August, but fell earlier this month when the president announced he needed heart bypass surgery. It dropped further last week when doc-tors revealed that Mr Yeltsin was so ill that the operation would be postponed for up to eight weeks.

Inheat comments by Dr Michael DeBakey, the US patriarch of cardiac surgery who was consulted on the operation, lifted share prices slightly at the end of last week, but most analysts say Russia is now condemned to a few more months of financial paralysis as investors wait for the outcome of Mr change. In a triumpbant Yeltsin's operation.

Mr Jonathan Hoffman, international economist at CS First Boston in London. agreed: "On a three to fiveyear period it is going to be one of tha best performing markets in the world. But why not wait until things are more certain? I think +12.46 +9.89 +15.55 that's what people are going to do.'

The length of their wait will chiefly be determined by the strength of Mr Yeltsin's heart and the skill of the Kremlin's newly famous surgeons. But investors will also be watching for a few economic milestones.

One is Russia's first eurobond issue, planned for this autumn. In spite of the political tension, some Moscow bankers think the eurobond. which is expected to establish a benchmark for other

This is the opinion of Mr Russian securities, will still be placed this year.

"I think there's a good chance the eurobond will eigners into the domestic come through. If it is placed, debt market, regardless of it will be at a higher pre the Kremlin leader's state of mium than they thought because the market will health. He argues that high demand it." said Mr Victor fact of Russian life and urges Huaco, president of Moscowforeign investors to learn to based investment managers live with it as a matter of Orion Capital.

But other analysts argue that the Russian government could postpone the eurobond launch to a more favourable moment without hurting its reputation in the eyes of international investors.

"If they go ahead with it now they risk having lower rating and having to ney a higher yield than they would if things were clearer If the top politician is gravely ill, especially in a place like Russia, it would be no surprise if they postponed it," Mr Hoffman said.

Another litmus test is the yields on domestic bonds. whose sky-high returns of more than 200 per cent earlier this year made Russia a textbook example of "crowd ing out". With the profits on Russia's least risky investment - government securities - so high, buyers had no reason to turn to the stock market or to put money directly into companies.

Russian and western economists agree that investment in the real economy can pick up only after the yields on GKOs, short-term treasury bills, drop even further than their current level of around 60 per cent.

As Ms Bella Ziatkis, head of the Ministry of Finance's securities department, said: Our goal in fact is to squeeze the money from the GKO market to other markets, and primarily to make banks invest in industry. But even if the money moves to the stock market, we will welcome such a development.

Many analysts believe that in the medium term, bringing GKO yields down is one of the most important steps the government must take to stimulate investment. But in the near future, the only financial news that really matters will be about Rusmatters will be about Rus-yielding) assets. Repackag-sia's most important heart. ing them allows a trade-off

NatWest joins the fashion to

securitise

The decision last week by National Westminster Bank to turn one-third - the equivalent of \$5bn - of its corporate loans into securities has highlighted the increasing popularity of securitisation in Europe.

Declining absolute yields on conventional bonds and narrowing spreads on corporate bonds have fuelled the interest of investors, which in turn has stimulated innovation by issuers.

The European scens has changed sharply since tha late 1980s, when only mortgages were securitised. Assets securitised recently range from consumer loans to junk bonds, and from motorway tolls to wine. In a few cases, even unsuccessful securitisations have themselves been further repackaged into new securities.

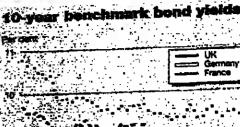

US institutions hava issued bonds backed by such esoteric assets as loans made to buyers of mobile phones, and Walt Disney even securitised revenues from motion pictures yet to be made. One of the most exotic deals in the US was by Grand Metropolitan, tha UK branded food and drinks company, which recently sold \$50m of bonds backed by tequila it plans to

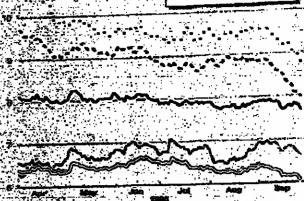

There is practically not a single class of asset that cannot be securitised," said ona analyst.

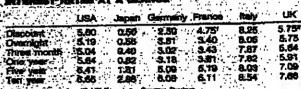

import from Mexico.

At first sight, NatWest's planned programme is innovative even by US standards. "It is the first time that a bank has taken a high quality investment grade corporate loan portfolio and transferred it to a securitisation vehicle," said Mr Martin Owen, chief executive of NatWest Markets.

The new securities, however, will resemble collateralised loan obligations, a technique used in the US since the late 1980s. CLOs are securitisations of diversified pools of (typically high

between credit quality and yield. Since most of the sets have been low quality, high-yielding loans, issuers have sought to generate demand for the repackaged. securities by partly sacrificing yield in exchange for credit enhancement

Around \$12bn of CLOs have been issued since 1987, of which just under \$3bn were launched last year. Outstanding CLO paper now amounts to roughly \$7bn.

Mr Paul Taylor, managing director of Duff & Phelps, the credit rating agency, said: "NatWest's transaction is technically a CLO." What made this deal different, he said, was that "CLOs have traditionally involved low quality assets".

NatWest argues that its deal differs from CLOs, because the underlying assets are all "high quality investment grade", or loans to unrated entities with high credit standing.

The securitised deal, in effect, will command a higher average credit rating than the underlying loans would gain in their own right, because the risk of default is reduced by the amalgamation of loans to around 300 borrowers.

rities issued by ROSE Funding Group, its special purpose vehicle, will range from highly rated to unratad notes, so it seems likely the credit quality of some of the assets will be lowered.

In compensation, the returns will be made more generous by attaching different lavels of seniority to the issues. All payments made by borrowers are distributed to asset-backed securities holders by order of seniority.

The decision to securitise only bigh quality loans reduces the risk of default, but should any borrower fail to make one or more payments on its debt, the loss would affect only the lowest quality paper. It would take a large number of defaults before holders of the top quality paper are affected.

Analysts are confident the transaction will attract healthy demand if the yield is generous, and could even inspire other banks.

Meanwhile, NatWest has moved on. Last week British Land, tha property group, announced it was launching bonds backed by future revenues from 135 Bishopsgate and had chosen as lead manager NatWest Markets. which is also the tenant of But NatWest said the secu- that property.

USINOR SACILOR ==

Proposed Acquisition for Allevard shares to be followed by the Merger of Allevard into Ascometal

At a meeting held on September 23, The Board of Directors of Ascometal (a 99.9 %-owned subsidiary of Usinor Sacilor), acting in agreement with the Board of Directors of Allevard (whose shares are listed on the secondary market of the Bourse de Paris), approved the proposed acquisition of Allevard by Ascométal. Consequently and in accordance with article 5.5.5. of the General Regulations of the Consell de Bourses de Valeurs, the Board of Directors of Ascométal decided to acquire all Allevard shares not held by Ascometal, that is, 522,680 shares, representing 32.7 % of its capital.

Purposes and Consequences of the Transaction

Aster, the Specialty Steels Division of Usinor Sacilor, carries out, with its different subsidiaries and in particular Ascométal, a policy of "downstream" development aimed at supporting the automotive, trucking and railway industries from which 45 % of its revenues A subsidiary of Ascométal since 1989, Allevard is one of the main players in this strategy, as a specialist supplier of suspension

products, as a specialist in fastening devices and as a producer of spring steels. The proposed transaction will position Allevard as a core business of Ascometal and Aster.

in the area of spring steels, the complementary nature of the activities of Ascometal and Unimetal, both subsidiaries of Aster, will permit the development of a global offering of products and services whith benefits from synergies in their respective know-how and technology, production capacities and marketing. The suspension and fastening devices activities lend themselves naturally to incorporation in separate subsidiaries as is the case with the other downstream activities of Aster. In this way, the suspension activity will be free to enter into alliances with industrial partners in order to accompany the globalisation of clients. It is estimated by the Group that the proposed transaction will only slightly impact the level of indebtedness of the Usinor Sacilor

Group, and, that it should produce a slight positive effect on profits per share. This press release is made for informational purposes only and does not constitute an offer to participate in the transactions

described herein. These transactions have not been registered with or approved by the Securities and Exchange Commission or the securities authorities of any state. This press release coutains certain forward looking statements that are based on the estimates and assumptions of the Usinor Sacilor

group. There can be no assurance that these forward looking statements or the estimates and assumptions on which they are based will prove to be correct. Notably, no assurance can be given that all required approvals will be obtained for the transactions described herein or that such transactions will be consummated and, if consummated, that they will lead to the business and financial results

MONDAY

Bosnia election decision

The body which supervised the elections in Bosnia, the Organisation for Security and Co-operation in Europe (OSCE), is due to announce whether the results should be certified as valid. Robert Frowick, the OSCE head in Sarajevo, is expected to say certification should be granted. Provisional figures appear to show a turn-out of 96 per cent, which many observers concluded was evidence of fraud on a massive scale. OSCE sources in Sarajevo deny that - in order to allow the west to begin disengagement from Bosnia - the poll will be declared a success whatever the evidence.

EU, Japan to Improve links Enhancing political ties and trade and investment flows will be at the forefront of the annual summit between the European Union and Japan, which starts in Tokyo. John Bruton, the Irish prime minister and current president of the European Council, Jacques Santer, the president of the European Commission, and Sir Leon Brittan, the commissioner responsible for trade policy, will meet Ryutaro Hashimoto, the Japanese prime minister, to review progress on all aspects of their relations.

Swiss debate Nazi Inquiry

The Swiss parliament begins its debate on the government's plan to investigate the fate of assets deposited in Switzerland before and

during the second world war. Amid intense criticism of Switzerland's role as a recycling point for looted Nazi gold, the government is rushing through legislation to facilitate the investigation - for which purposes the bank secrecy laws would be lifted and imprisonment or fines of up to SFr50,000 (£25,600) imposed on anybody obstructing it.

Spanish budget presented

Spain's centre-right government sends its first budget to parliament, with tough spending curbs aimed at meeting the deficit limits for the European single currency. These include a pay freeze next year for 2m public-sector employees. Unions will be staging their first demonstrations against the plan, and another protest day is scheduled to take place a week before parliament begins its debate on the budget on October 22. However, safe passage for the budget bill is guaranteed after agreement between the minority government and Catalan and other regional parties.

Rao in criminal court

prime minister, is to appear in a Delhi Washington (to Oct 3).

The opposition Labour party's conference continues in Biackpool until October 4 amid the government's controversial 'demon eyes' campaign

criminal court for the first time on charges of conspiracy and cheating a London-based food executive out of \$100,000 (£64,000). Mr Rao resigned as Congress party president after he was ordered to answer the charges in court. Lawyers say he could be arrested following the proceedings, but he is expected to ask for bail.

WorldAid exhibition starts About 45 humanitarian agencies and more than 260 commercial suppliers are taking part in the first ever WorldAid exhibition and conference at Geneva's exhibition centre (to Oct 4). All the main United Nations relief agencies, church groups, the International Red Cross and private charities are participating. WorldAid, the group organising the event, says humanitarian aid is now worth \$8bn

Public holidays Australia, Botswana, Sao Tome.

materials and transport equipment.

TUESDAY

IMF-WB discuss debt relief

Finance ministers on the Development Committee of the World Bank and International Monetary Fund will discuss proposals to help relieve the debt burdens of up to 20 of the world's poorest countries. These discussions come before the formal opening of the annual meeting of the IMF and World Bank, in which finance ministers and central bank governors

EU foreign ministers

EU foreign ministers meet in Luxembourg to discuss how to retaliate against the US Helms-Burton and D'Amato laws penalising companies doing business in Cuba, Iran and Libya. The EU is likely to agree counter-measures in principle, possibly including an appeal to the World Trade Organisation. Ministers will discuss the escalating violence between Israel and the Palestinians and negotiations in the Maastricht treaty review conference (IGC).

British MP sues for libel

Conservative minister, brings a libel action against The Guardian, which accused him of accepting cash to ask questions in the House of Commons. The Guardian has subpoensed John Major, the British prime minister, Michael Heseltine, the

Ministers plan for IGC

The foreign ministers of Germany and France, Klans Kinkel and Hervé de Charette, meet in Paris for a Franco-German seminar on the intergovernmental conference. Apart from further attempts to co-ordinate their strategy throughout the remainder of the IGC the two foreign ministers will discuss the agenda at the EU summit in Dublin.

Franco-Italian summit omano Prodi, the Italian of

Jacques Chirac in Naples for a Franco-Italian summit. The advent of the centre left government in Italy headed by Mr Prodi has helped put behind one of the worst periods in Franco-Italian relations. This was provoked by Italy voting against French nuclear tests at the UN and personality clashes between Lamberto Dini, the previous Italian prime minister, and Mr Chirac.

THURSDAY

Local elections in Brazil

In the first mid-term electoral test of Fernando Henrique Cardoso, the Brazilian president, more than 100m people vote in municipal elections. Success for Mr Cardoso's supporters in the ballots for 5.508 mayors would boost his hopes of running for a secon term in 1998. Brazilian law prohibits the re-election of executive officers. However, with the support of two-thirds of congressmen - who have strong party links with their local government colleagues - the constitution could be changed.

US complains over Fuji

The US has called a special meeting of the World Trade Organisation's dispute settlement body in Geneva to request a WTO panel on alleged restrictions in the Japanese photofilm market. The dispute, which has pitted Rastman Kodak of the US against its Japanese rival Fuji, has already cost both firms millions of dollars in fees. Kodak claims it has lost business worth \$5.5bn (£3.52bn) in the past 20 years because of government-backed restrictions to curb the US firm's access to the Japanese market,

Serbian-Bosnian meeting Slobodan Milosevic, the Serbian

president, meets Alija Izetbegovic, the Bosnian Moslem president, in Paris for their first bilateral summit since the war. They are likely to concentrate on establishing full diplomatic relations.
